The effects of pollution on water quality - Escambia River and Bay, Flor a were investigated during a period of low Escambia River discharge (1,068 cfs) in September and October, 1969. The tidal circulation and bottom sediment characteristics of the bay were reported. Further circulation and more extensive sediment characterization studies were made in June, 1970, at much higher river flows (59,533 cfs). The report presents these results and compares them with those of the 1969 study. Both studies show that Escambia Bay sediments are highly organic and tidal circulation in Upper Escambia Bay is poor. Because of these conditions, sediment disturbances--such as result from dredging--can cause severe oxygen depletion. Massive fish kills could result.

A GUIDE TO THE STUDY OF SOLID WASTE SYSTEMS.
Open-file rept.,
Harry R. Little. Dec 71, 49p* TO-1.1.065/0

Descriptors: (*Waste disposal, Evaluation), (*Urban planning, Waste disposal), Forms (Paper), Management planning, Personnel management, Financing, Facilities, Regulations.
Identifiers: *Solid waste disposal.

The paper is intended as a guide to be used by those charged with evaluating solid waste systems and as a report on the present 'state-of-the-art' of engineering-management studies of such systems. The forms and checklists given here are only suggestions as to the types of data that must be collected and evaluated. They are not intended to replace good judgment but only as an aid in its application to the study of solid waste systems.

MANAGEMENT INFORMATION FOR SOLID WASTE COLLECTION,
Robert M. Clark. Aug 72, 24p EPA-R2-72-011

Descriptors: (*Waste disposal, *Information systems), (*Management planning, Waste disposal), Collecting methods, Cost analysis, Data acquisition, Ohio, Urban areas.
Identifiers: *Solid waste disposal, *Management information systems, Cleveland (Ohio).

The delivery of solid wastes services involves a complex interaction of men, machinery, and politics. Despite these complexities, very little reliable information on solid waste management systems is available to decision makers. In recognition of this problem of data scarcity, a study was initiated on a pilot scale to collect reliable, uniform and continuous data from solid waste collection routes. The purpose of the study was to provide insight and experience into the collections of solid waste data which would be useful for national comparisons. In the paper, the pilot study is discussed, and a case study illustrating the evolution of the pilot study into a management information system for solid waste collection is presented. (Author)

ANALYSIS OF FEDERAL PROGRAMS AFFECTING SOLID WASTE GENERATION AND RECYCLING.

1972, 160p* EPA-SW-72-4-4
Contract EPA-71-0106

Descriptors: (*Waste disposal, *Government policies), National government, Taxes, Materials recovery, Legislation, Highway planning, Commerce Regulations, Forestry, Auditing, Metal scrap, Rail transportation, Standards, Building codes, Waste papers.
Identifiers: *Solid waste disposal, Waste recycling, Office of Tax Analysis, Federal Trade Commission, Forest Service, General Accounting Office, Interstate Commerce Commission, National Bureau of Standards, Office of Community Development, Department of Defense, General Services Administration, United States Postal Service, National forests, Secondary materials industry, Waste recycling.

Agencies of the Federal government have been assigned the responsibility of carrying out many programs, some of which affect either the generation or recycling of solid wastes throughout the country. The effects on solid waste generation and recycling of most of the approximately 1,000 Federal agencies are minimal or nonexistent; however, some of the Agencies' programs have a very direct effect. The 12 agencies identified as having the most influence are the subject of the report. In addition to determining the extent of the respective agency influences, the report contains several specific recommendations for improving the Federal role in national solid waste management. Contract EPA-68-02-0099

Descriptors: (*Air pollution, *Gas analysis), (*Fluorides, Gas analysis), (*Particles, Gas analysis), (*Flue gases, *Gas sampling), Industrial wastes, Chemical analysis, Aluminum industry, Iron and steel industry, Glass industry, Beneficiation, Phosphate deposits, Reviews, Flow charting, Potentiometric analysis, Electrodes, Cryolite, Distillation, X ray analysis, Errors.
Identifiers: *Air pollution detection, Phosphate industry, *Ion selective electrodes.

A study was conducted which has resulted in the development of tentative sampling and analysis of fluorides emitted from various stationary sources. The study was directed toward developing and understanding the kinds of species which are present in each source emission. The report presents the following information: A review of the various unit processes within the primary aluminum, iron and steel, glass, and phosphate processing industries; industry flow diagrams which include estimates of fluoride throughout; and an inventory of emission species found within each process; Descriptions of sampling apparatus and procedures for gaseous and particulate fluorides, evaluations of the reactivity of sampling train components and sample container materials in the presence of fluoride ion, and a description of recommended apparatus for each industry; Development of analytical methods for measuring fluoride ion; Analysis of field samples collected from each industry to identify the chemical species present and to evaluate the suitability of developed analytical methods for measuring fluoride; and Recommendations for tentative sampling and analysis methods for gaseous and particulate fluoride. THE BEVERAGE CONTAINER PROBLEM. ANALYSIS AND RECOMMENDATIONS.
Tayler H. Bingham, and R. H. Ongerth. Sep 72, 201p* EPA-R2-72-059
Contract EPA-68-03-0038

Descriptors: (*Waste disposal, Containers), (*Containers, *Government policies), (*Beverages, Containers), National government, Bottles, Cans, Glass, Steels, Aluminum, Cost analysis, Legislation, Taxes, Education, Materials recovery, Demand (Economics), State government.
Identifiers: *Beverage containers, *Solid waste disposal, Litter, Container deposits, Waste recycling, Elasticity of demand.

The study includes 2 principle elements: The analyses of 3 types of environmental concern that might be cited as the rationale for a beverage container policy; and The analyses and evaluation of alternative governmental policies for beverage containers, and resulting recommendations. Three types of environmental dimensions to beverage containers were examined as possible bases for government action. These were: The resource dimensions to beverage container production, especially nonrefillable containers; The solid waste dimensions of discarded beverage containers; and The amenities dimensions of littered beverage containers. It is concluded that beverage containers are an environmental problem primarily because some consumers of beverages litter their empty containers rather than disposing of them properly. (Author)

FLYWHEEL DRIVE SYSTEMS STUDY.
Final rept.,
R. R. Gilbert, G. E. Heuer, and E. H. Jacobsen. 31 Jul 72, 292p* LMSC-D246393 APTD-1182
Contract EPA-68-04-0048

Descriptors: (*Motor vehicles, Flywheels), (*Automobile engines, *Flywheels), (*Air pollution, *Exhaust gases), (*Automobile transmission, Design), Feasibility, Performance evaluation, Specifications, Burst tests, Kinetic energy, Safety engineering, Hydrocarbons, Nitrogen oxides, Carbon monoxide, Computer programs, BASIC programming language.
Identifiers: *Air pollution abatement, *Hybrid vehicular propulsion, *Automobile exhaust.

The systems study effort has been directed toward the verification and refinement of the conclusions reached in a previous study, which indicated that the fly wheel hybrid drive concept might be a technically feasible way to power a full size automobile. The present study makes use of more detailed input information on engine emissions on transmission characteristics. These data are augmented by detailed flywheel technology studies and test results to provide the background for more precise conclusions regarding the flywheel drive concept. The results do indicate that the flywheel bybrid drive concept is a technically feasible propulsion system for a full size automobile. The report describes the work done to accomplish the following goals: advance the development of flywheel systems technology including the development of final designs on conformal housings, bearings, seals, and evacuation systems; demonstrate positive flywheel energy containment in burst tests of flywheels; formulate safety analyses, using fault-tree and gross-hazard methodologies, produce engine-mapping project data to permit calculation of engine emission data resulting from flywheel drive operations. LOWER RIO GRANDE VALLEY REGIONAL PLAN FOR SOLID WASTE DISPOSAL UTILIZING RAIL HAUL.
Open file rept.,
J. F. Malina, Jr., and B. F. Martin. 1971, 84p EPA-SW-5tg-71

Descriptors: (*Waste disposal, *Texas), (*Rio Grande Valley, Waste disposal), Rail transportation, Regional planning, Earthfills, Collecting methods, Cost estimates.
Identifiers: *Solid waste disposal, Sanitary landfills, Cameron County (Texas), Hidalgo County (Texas).

The objective of the study was to develop a regional approach to solid wastes management for the Lower Rio Grande Valley (Cameron and Hidalgo Counties) in the State of Texas. The solid waste production was determined by weighing the municipal refuse and brush collected by trucks in several communities in the Valley. A secondary objective was the investigation of the feasibility of utilizing the existing railroad system as an integral part of the regional refuse disposal operation. Economic factors indicate the rail-haul may be the best method for removing refuse. Recommendations are given.

REPORT ON POLLUTION OF THE ST. MARYS AND AMELIA ESTUARIES GEORGIA - FLORIDA,
Thomas P. Gallager. Aug 71, 52p

Descriptors: (*Water pollution, *Florida), (*Georgia, Water pollution), Industrial wastes, Sewage, Spent liquors (Pulping), Saint Marys Estuary, Paper industry, Water quality, Dissolved gases, Oxygen, Amelia Estuary.
Identifiers: Fernandina Beach (Florida), Saint Marys (Georgia), Nassau County (Florida), Camden County (Georgia), Sewage treatment effluent.

The discharge of untreated and inadequately treated municipal and industrial wastes into the Amelia River, St. Marys River, and tributary streams caused serious water quality degradation and interfered with water uses in the coastal waters of Georgia and Florida. Untreated wastes discharged from the Rayonier, Inc. and Container Corporation of America paper mills and inadequately treated sewage from the City of Fernandina Beach are the main offenders. The report presents the results of a study of the water quality of this area and recommendations for improvement.

DEVELOPMENT OF X-RAY FLUORESCENCE SPECTROSCOPY FOR ELEMENTAL ANALYSIS OF PARTICULATE MATTER IN THE ATMOSPHERE AND IN SOURCE EMISSIONS,
L. S. Birks, J. V. Gilfrich, and P. G. Burkhalter.
Oct 72, 48p EPA-R2-72-063

Descriptors: (*Air pollution, Particles), (*Particles, *X-ray fluorescence), (*Spectrochemical analysis, Particles), Trace elements, Air filters, Sensitivity, Particle size, X-ray analysis, Excitation, Microanalysis.
Identifiers: *Air pollution detection.

The application of x-ray fluorescence to the analysis of air pollution particulate samples was demonstrated to be a rapid and economical technique at concentrations encountered in practical situations. No sample preparation is necessary for particulates deposited on filters, which can be placed directly in the x-ray equipment. Because the specimens are thin, matrix absorption and fluorescence are negligible and calibration curves are linear. All of the elements of interest can be measured simultaneously in 100 seconds with either multichannel x-ray crystal spectrometers or multichannel analyzers with energy dispersion detectors. Sensitivity and detectability were compared for four types of excitation (x-ray tubes, fluorescers, radioisotopes and high-energy ions) and for the two types of data acquisition (crystal spectrometers and energy dispersive detectors). AUTOMOBILE GAS TURBINE - OPTIMUM CYCLE SELECTION STUDY.
Final rept.,
R. J. Rossbach. Jun 72, 337p* GESP-725FS
APTD-1343
Contract EPA-68-01-0406

Descriptors: (*Automobile engines, *Gas turbine engines), Design, Abatement, Air pollution, Exhaust gases, Performance evaluation, Gas compressors, Heat exchangers, Cost estimates, Maintenance, Recommendations, Regenerators.
Identifiers: *Air pollution abatement, Recuperators.

The study was conducted with the following objectives: To define the optimum gas turbine engine (s) capable of meeting the 1976 Federal Standards on automobile emissions and capable of being developed by the year 1975; To present recommendations for the development and demonstration of the selected optimum engine (s) by 1975 and for mass production of vehicles powered by such engines at earliest possible date after 1975. In the report an analysis and preliminary design program was carried out. First ten gas-turbine engine types were screened by establishing the baseline technology, by carrying out a design Point Cycle Study, and finally by making a preliminary selection of three engine types. Off design analysis, mission analysis, and economic analysis were performed on the two engines which were finally selected. However, the amounts and types of exhaust emissions were not studied. EVALUATING TRANSPORTATION CONTROLS TO REDUCE MOTOR VEHICLE EMISSIONS IN MAJOR METROPOLITAN AREAS.
Interim rept.

16 Mar 72, 367p* APTD-1118
Contract EPA-68-02-0048
Prepared in cooperation with Teknekron, Inc., Washington, D.C.

Descriptors: (*Air pollution, *Exhaust gases), (*Urban planning, Air pollution), (*Urban transportation, Air pollution), Motor vehicles, Feasibility, Cost estimates, Carbon monoxide, Abatement, Automotive fuels, Liquefied natural gas, Natural gas, Gasoline, Vehicular traffic control, Mass transportation, Buses (Vehicles), Rapid transit railways, Predictions, Maintenance.
Identifiers: Automobile exhaust, *Air pollution abatement, Taxicabs, Working hours, Motor vehicle inspection.

The overall objective was to evaluate transportation controls to reduce motor vehicle emissions in major metropolitan areas. An appreciation of transportation controls was made, and their effectiveness in reducing emissions, their feasibility, and the probable costs were assessed. The transportation controls which could conceivably reduce motor vehicle emissions in the next few years are described and evaluated. The intent was to provide assistance in the preparation of transportation components of state implementation plans. In most of the metropolitan areas under study, overall CO emission reductions of at least 50 percent from existing levels appear required to meet the national ambient air standards by 1975. Most transportation controls that are capable of being introduced in the next few years offer the potential for only modest reductions. All controls would entail very substantial implementation costs which are discussed.

CASCADE IMPACTOR NETWORK,
Robert E. Lee, Jr., and Stephen Goranson. Jul 72, 132p AP-108
Paper copy available from GPO $1.00 as EP4.9:180.

Descriptors: (*Air pollution, Particles), (*Urban areas, Air pollution), Impactors, Samplers, Particle size distribution, Gravimetric analysis, Seasonal variations, District of Columbia, Illinois, Ohio, Colorado, Missouri, Pennsylvania.
Identifiers: *Air quality data, Cascade impactors, High volume samplers, Chicago (Illinois), Cincinnati (Ohio), Denver (Colorado), Philadelphia (Pennsylvania), Saint Louis (Missouri).

An experimental network of modified cascade impactors was set up, as part of the National Air Surveillance Network, to determine gravimetrically the particle size distribution of suspended particulate matter in the air in six urban areas. The modified cascade impactor, the analytical methodology, and the computer processing of data are described. Results of the first year's operation indicate that suspended particulate matter in urban air is predominantly submicron in size (expressed as equivalent spheres of unit density). Variations in the quarterly composites of mass median diameter, various size fractions less than or equal to 1 and 2 microns, and the degree of particle dispersion expressed by the geometric deviation generally followed seasonal patterns. Future expansion of the network is discussed. (Author)

CORROSION STUDIES IN MUNICIPAL INCINERATORS.

1972, 129p EPA-SW-72-3-3
Contract EP-00325, EP-00325-S1

Descriptors: (*Incinerators, *Corrosion), (*Waste disposal, Incinerators), (*Scrubbers, Corrosion), Corrosion tests, Protective coatings, Corrosion prevention, Combustion products, Data, Corrosive gases.
Identifiers: Solid waste disposal.

Corrosion probes of 11 alloys were placed in 2 municipal incinerators, one refractory lined and the other a water wall. After the probes were exposed to varying temperatures, times, and conditions, some of the conclusions included: metal-wastage rates are temperature dependent; water-wall incinerators should not be used to generate high-temperature superheated steam; hydrogen chloride and sulfur dioxide in the flue gases were of sufficient concentration to be of concern and account for the types of deposits found on the tubes; roles played by the sulfur- and chlorine-containing compounds in the refuse are of great importance and are closely interrelated; zinc and lead further complicate the corrosion process; non-metallic materials should be considered as coating for wet scrubbers of incinerator gases; corrosion of incinerator grates is not a serious problem. AUTOMOBILE GAS TURBINE OPTIMIZATION STUDY.
Final rept.

14 Jul 72, 414p AT-6100-R7 APTD-1291
Contract EPA-68-04-0012

Descriptors: (*Gas turbine engines, Performance evaluation), (*Automobiles, Motor vehicle engines), Air pollution, Emission, Design criteria, Combustion chambers, Automotive transmissions, Fuel consumption, Cost analysis, Economic analysis.

A study was conducted for the purpose of defining the optimum gas turbine engine capable of meeting the 1976 emission standards, when used in the largest-selling size classification of U.S. automobiles and capable of being developed by the year 1975. This study approach was to perform limited analyses, consisting of design-point cycle studies of a large number of potential candidate automobile engines comprising single-shaft, free-turbine and multiple spool configurations. Cycle pressure ratios and temperatures, with turbine cooling flow rates, were varied, thus providing sufficient information to estimate qualitatively the part load performance of each engine. In these analyses, the effects of cycle modifiers were determined. Twelve cycles were chosen for off-design performance analysis over the entire operating range of each engine. (Author)

URBAN SOLID WASTE MANAGEMENT. ECONOMIC CASE STUDY,
Robert M. Clark. Aug 72, 26p* EPA-R2-72-012

Descriptors: (*Waste disposal, *Cost analysis), (*Urban planning, Waste disposal), Management planning, Productivity, Cost estimates, Economic analysis, Labor estimates, Operating costs, Capital costs.
Identifiers: *Solid waste disposal.

Little has been written about the operational and economic problems affecting specific communities on solid waste problems. To provide some insight into local problems, a case-study approach was used to examine a sample midwestern city (approximately 500,000 population) with solid waste management problems similar to most other medium-to-large urban communities. Changes in the productivity of solid waste collection crews brought about by substituting capital for labor are studied. The economic effects of solid waste management costs on residents are analyzed by comparing solid waste costs with disposable income. (Author)

Contract FWQA-14-12-937
Paper copy available from GPO $1.25 as EP1.16:16080DVF 02/72.

Descriptors: (*Detergents, Performance evaluation), (*Surfactants, Detergents), (*Water pollution, Detergents), (*Sulfonates, Detergents), Sulfonamides, Formulations, Synthesis (Chemistry), Toxicology, Fishes, Algae, Nutrients, Carboxymethyl cellulose.
Identifiers: Water pollution abatement, *Phosphate free detergents, Water hardness.

Phosphate-free detergents, using three surfactants which would be acceptable substitutes for conventional home laundry products, were formulated and evaluated. These surfactants are relatively safe, non-polluting, and biodegradable. The formulations are effective over a considerable water hardness range. Two of the surfactants investigated are about equally capable of yielding detergent formulations of high promise. All formulations contained 20% of the selected surfactant (a sulfonate or sulfonamide) and 2% carboxymethylcellulose (CMC). Possible substitutes or optimum use level were not investigated. Although the point was not pursued as a specific end, indications are that use of these surfactants may lead to detergent formulations of lower basicity than currently in use, rendering them safer and less corrosive. The formulation of choice had good overall detergent properties performing well under all test conditions and is essentially free of potentially polluting substances. Limited biological testing of these surfactants indicates safety relative to fish toxicity and lack of algal stimulating properties.

Report on Air Pollution Control.

Descriptors: (*Motor vehicle drive systems, *Flywheels), (*Automobile engines, Flywheels), (*Air pollution, Exhaust gases), (*Reinforced plastics, Flywheels), Buses (Vehicles), Performance standards, Design, Energy storage, Stresses, Failure, Automobile transmissions, Safety engineering, Disintegration, Epoxy resins, Fiberglass reinforced plastics.
Identifiers: *Air pollution abatement, *Hybrid vehicular propulsion, Automobile exhaust, Carbon reinforced plastics, Boron reinforced plastics.

An analytical study indicated that a flywheel-only propulsion system could satisfy specified performance requirements for a city bus, and that flywheel/heat engine hybrids could meet the specified requirements for cars, vans, and buses. In all cases substantial emission-free ranges could be achieved with hybrid systems by using the engine only periodically (at constant load) to recharge a large, high-energy flywheel. Experiments verified the principle of the superflywheel by spin tests of unindirectional materials in rod or bar rotor configurations. The better results demonstrated energy densities greater than 30 W-h/lb (max. ± 18) for boron filaments and slender rods of graphite and glass composites. Composite flywheels will be much easier to contain than metal flywheels and are promising candidates for energy storage devices. (Author)

APPLICABILITY OF SO2-CONTROL PROCESSES TO POWER PLANTS.
Final rept.,
J. A. McSorley. Nov 72, 79p* EPA-R2-72-100
Contract CPA-70-68

Descriptors: (*Electric power plants, *Air pollution control equipment), (*Sulfur dioxide, Air pollution control equipment), (*Scrubbers, Air pollution control equipment), Cost estimates, Installing, Oil, Coal, Limestone, Ammonia, Magnesium oxides, Adsorbents, Calcium oxides, Chemical engineering, Capital costs, Waste disposal, Regeneration (Engineering), Materials recovery, Air pollution.
Identifiers: Air pollution economics, Alkaline scrubbing, Limestone scrubbing, Ammonia scrubbing, Magnesium oxide scrubbing, Wellman-Lord process, Waste gas recovery, Stone and Webster process, *Air pollution control.

The report describes and discusses the work undertaken in a study which proposed to determine the extent to which SO2-control units can be installed in existing oil- and coal-fired power plants. In this, and a previous similar study, 14 different power systems were evaluated having a total oil- and coal-fired generating capacity of 88,520 megawatts of which 78% had adequate space for retrofitting scrubbers. To obtain an indication of installation costs, a qualitative retrofit complexity factor was estimated for each boiler unit studied by considering such items as space availability, site assessibility, and degree of plant modification. The complexity factor relates the cost of retrofitting a control system to the cost of the same system installed on a new power plant. The distribution of relative operating costs over generating capacity was also calculated.

FLOATING OIL RECOVERY DEVICE.

Feb 71, 76p EPA-15080-FWO-02/71
Contract EPA-14-12-903
Paper copy available from GPO $1.00 as stock no. 5501-0116.

Descriptors: (*Water pollution, Oils), (*Skimmers, *Oils), (*Absorbers (Equipment), Oils), Viscosity, Materials recovery, Catamarans, Performance evaluation, Belt conveyors, Design, Tests.
Identifiers: *Oil pollution removal, Oil pollution control.

Flow bench tests of a model rotating belt-Couette flow oil recovery device were conducted to evaluate its use in oil spill cleanup. These tests revealed that the device is capable of harvesting oils over a broad range of viscosities at the rates and purities specified by the EPA, if the inlet can be made to 'track' the water surface. Analyses were conducted to design a catamaran vessel suitable for mounting the Oil Pickup Unit (OPU) and also providing the requisite surface following performance. Vessel response analyses showed that the required surface following behavior cannot be provided by the catamaran itself, but can be achieved by floating the OPU and decoupling this assembly from the vessel in heave and surge.

IMPREGNATION OF CONCRETE PIPE.

Jun 71, 78p EPA-11024-EQE-06/71
Contract EPA-14-12-835
Paper copy available from GPO $0.75, as stock no. 5501-0601. EP2.10:11024-EQE-06/71.

Descriptors: (*Concrete pipes, Impregnating), (*Corrosion prevention, Concrete pipes), Sewers, Permeability, Polymers, Coal tar, Linseed oil, Sulfur, Urea, Formaldehyde, Exposure.

The program was undertaken to investigate methods to increase the corrosion resistance, increase the strength, and reduce the permeability of concrete used in sewer line applications by impregnating the concrete pipe with relatively low cost resins such as asphalt, coal tars, linseed oil, sulfur, urea-formaldehyde, and others. Methods to accomplish this end were achieved and the materials, techniques of application, test results and economics are presented in this report. (Author)

HYDRAULICS OF LONG VERTICAL CONDUITS AND ASSOCIATED CAVITATION.
Jun 71, 52p EPA-11034-FLU-06/71
Contract EPA-14-12-861
Paper copy available from GPO $0.60 as stock no. EP2.10:11034-FLU-06/71.

Descriptors: (*Storm sewers, Design), (*Cavitation, Storm sewers), Hydraulics, Head (Fluid mechanics), Two phase flow.

Experimental studies were undertaken to examine the flow in long vertical conduits with particular reference to the design of storm water drop shafts. A distinguishing characteristic of such flow is the potential cavitation regime. Its existence depends upon the design of the structure. The cavitation regime will develop when the conduit is sufficiently long and the head sufficiently large. It can also be generated at a lower head if a control valve is installed in the supply line so that the net head can be negative. If a small amount of air is introduced into the system, the cavitation region is eliminated, the pressure gradient is more uniform, and the flow consists of a uniform mixture of air and water. DISPOSAL OF POLYMER SOLID WASTES BY PRIMARY POLYMER PRODUCERS AND PLASTICS FABRICATORS,
Chester W. Marynowski. 1972, 103p* EPA-SW-34C
Contract PH-86-68-160
Paper copy available from GPO $1.00 as stock no. EP1.17:34C.

Descriptors: (*Plastics, *Waste disposal), (*Industrial waste treatment, Plastics), Reviews, Polyethylene, Polypropylene, Polyvinyl chloride, Polystyrene, Thermoplastics, Inventories, Sources, Chemical industry, Earth fills, Biodeterioration, Oxidation, Incinerators, Combustion, Pyrolysis, Questionnaires, Surveys.
Identifiers: *Solid waste disposal, *Plastics industry, Sanitary landfills, Pyrolysis incineration.

The report deals exclusively with the industrial, or 'pre-consumer' part of the polymer solid waste problem. It explores the nature and extent of the problem in the United States for that segment of the plastics industry representing the largest product tonnage; namely, the segment dealing in the production and fabrication of the principal thermoplastics. It presents technical and economic information on polymer waste disposal methods in actual use, and evaluates alternative approaches to polymer solid waste disposal. (Author)

RECOMMENDED STANDARDS FOR SANITARY LANDFILL DESIGN, CONSTRUCTION, AND EVALUATION AND MODEL SANITARY LANDFILL OPERATION AGREEMENT.

1971, 25p* EPA-SW-86ts
Prepared in cooperation with National Solid Wastes Management and Federal Solid Waste Management Program. See also report dated 1971, PB-203 623.

Descriptors: (*Waste disposal, *Earth fills), (*Sanitary engineering, Earth fills), Standards, Acceptability, Evaluation, Site surveys, Operations, Design, Contract administration, Urban planning.
Identifiers: *Solid waste disposal, *Sanitary landfills.

The report provides information to help designers, operators, and control agencies achieve and maintain good sanitary landfill practices. Recommendations suggest basic requirements involved in designing and constructing a sanitary landfill. An evaluation method has been developed to measure the level of acceptability of the operations taking place at a disposal site and to provide a comparison of its suitability with that of other evaluated sites. The evaluation provides a tool that a community, organization, consultant, or citizen can use to judge the design and construction of any site under consideration. Also presented are provisions which should be included in instructions to landfill bidders. A model sanitary landfill operation agreement form is shown.

Contract PH-86-68-203
Paper copy available from GPO $1.25 as stock no. 5502-0035, EP3.2:P69.

Descriptors: (*Waste disposal, *Oceans), (*Water pollution, Waste disposal), Sludge disposal, Industrial wastes, Ships, Barges, Marine biology, Ecology, Spoil, Inorganic acids, Refuse disposal, Radioactive wastes, Project planning, Monitors, Urban planning, Reviews, Law (Jurisprudence), International law, Regulations, National government, State government.
Identifiers: *Solid waste disposal, *Liquid waste disposal, *Ocean waste disposal.

The report summarizes the results of a field survey of twenty U.S. coastal cities to appraise the national status of oceanic disposal of solid wastes and industrial sludges from ships and barges. The inventory of solid wastes and industrial sludges included construction and demolition debris, dredge spoils, sewage sludge, and spent acids. The objectives were: To determine the nature and magnitude of present oceanic disposal practices from major U.S. coastal cities; To evaluate what is known regarding the effects of these wastes on the marine environment, and particularly, the biota; To summarize the legal framework under which these disposal operations are carried out; To determine the status of regulatory monitoring of these operations; and To identify those aspects of marine disposal which are problem areas and make appropriate recommendations.

AN INVESTMENT DECISION MODEL FOR CONTROL TECHNOLOGY.
Socioeconomic environmental studies series.
Robert M. Clark. Sep 72, 22p* EPA-R5-72-004

Descriptors: (*Waste treatment, *Financing), (*Water treatment, Financing), (*Sewage treatment, Financing), (*Industrial waste treatment, Financing), Waste disposal, Air pollution, Water pollution, Mathematical models, Decision making, Management planning, Urban planning, Cost estimates, Capital costs, Operating costs, Taxes, Linear programming.
Identifiers: *Air pollution control, *Water pollution control, *Solid waste disposal.

Investment decisions in control technology for environmental management are similar to those in other areas of public finance. These decisions, which may include the decision to construct a water or wastewater treatment system or an incinerator, depend on adequate financial support, which means not only availability of money in sufficient quantity, but also at the time when needed. A mathematical model, incorporating borrowing and lending variables, has been structured to provide an efficient method of studying the problem. The model formulation assumes that investment decisions for control technology can be separated into a total operating and capital cost decision and an investment cost decision. These costs are minimized in 2 stages. The first stage uses a fixed-charge algorithm and the second stage, a linear programming algorithm. (Author)

AN INVESTIGATION OF THE BIODEGRADABILITY OF PACKAGING PLASTICS,
James E. Potts, Robert A. Clendinning, and Watson B. Ackart. Aug 72, 87p* EPA-R2-72-046
Contract CPE-70-124

Descriptors: (*Plastics, *Biodeterioration), (*Packaging materials, Biodeterioration), (*Waste disposal, Plastics), Polyethylene, Polystyrene, Polymeric films, Bags, Molecular structure, Molecular weight, Pyrolysis, Ethylene copolymers, Styrene copolymers, Soil tests, Lactams, Plasticizers, Antioxidants, Absorbers (Materials).
Identifiers: *Solid waste disposal, Plastic bags, Pyrolysis incineration, Polymer additives.

The study investigates the effects of various structural parameters on the biodegradability of plastics. It includes a determination of the effect of molecular weight and polymer end group composition on the biodegradability of polyethylene and polystyrene, and an evaluation of the biodegradability of various block, graft and random copolymers containing polyethylene or polystyrene chain segments. Also included is a study of the biodegradability of organic chemicals used commercially as additives to plastics. The study verifies the popular belief that the current high volume, high molecular weight packaging plastics are not biodegradable at practical rates. The report also establishes that the structural modification of polyethylene and polystyrene by random copolymerization with other monomers will not lead to biodegradability. (Author)

AN ACCOUNTING SYSTEM FOR SOLID WASTE MANAGEMENT IN SMALL COMMUNITIES,
Eric R. Zausner. 1971, 21p EPA-SW-28ts
Library of Congress Catalog Card no. 78-611564.
Paper copy available from GPO $0.30 as stock no. 5502-0021, EP3.2:AC2.

Descriptors: (*Waste disposal, *Accounting), Cost analysis, Management planning, Benefit cost analysis, Collecting methods, Data acquisition, Information systems, Urban planning, Communities, Forms (Paper).
Identifiers: *Solid waste disposal, Management information systems.

The increasing costs and complexities of solid waste collection and disposal require new, more sophisticated management techniques. Although cost accounting represents only one part of the total information system, its design, installation, and utilization can represent a significant step in the development of effective solid waste management. The proposed system provides a guide to the type and quantity of information to be collected, its classification, and the method of collection. The system described is designed primarily for small communities (<25,000) that collect and dispose of the solid wastes generated in their jurisdiction. The system was specifically designed to be effective for packer-truck collection and landfill disposal operations.

ANALYSIS OF FINAL STATE IMPLEMENTATION PLANS: RULES AND REGULATIONS,
L. J. Duncan. Jul 72, 86p* APTD-1334
Contract EPA-68-02-0248

Descriptors: (*Air pollution, *Regulations), (*Government policies, Air pollution), State government, Combustion, Incinerators, Industrial plants, Sulfuric acid, Chemical industry, Metal industry, Paper industry, Fuel storage, Particles, Sulfur dioxide, Nitrogen oxides, Tables (Data), Concrete plants, Coal preparation, Carbon monoxide, Hydrocarbons.
Identifiers: *Implementation Air Pollution Planning Program, Sulfuric acid plants, Nitric acid plants, Fertilizer industry.

The document summarizes the rules and regulations found in State Implementation Plans (SIP) submitted in response to the 1970 Clean Air Act.

Final SIP's were submitted by all 50 states, the District of Columbia, Puerto Rico, American Samoa, Guam, and the Virgin Islands. Whenever both state regulations were extracted and put in the summary table, with footnotes indicating the local regulations. The regulations cover particulate and gaseous emissions. The particulate emission regulations refer to: Fuel burning; Incineration; General process sources; Visible emissions, and Sulfuric acid plants. The following gaseous emissions are covered: Fuel burning (SO2); Fuel burning (NOx); Non-ferrous metals (SO2); Kraft pulp (SO); Sulfuric acid plants (SO2); Sulfur recovery plants (sulfur); Nitric acid plants (NO2); All sources (hydrocarbons); Petroleum storage; All sources (CO). A STATE-OF-THE-ART REPORT ON SYSTEMS INCORPORATING HIGHWAY TRANSPORTATION.
Final rept.,
Tobias A. Hegdahl. 1972, 170p* EPA-SW-99-72

Descriptors: (*Waste disposal, *Collecting methods), (*Cargo transportation, Waste disposal), Reviews, Highway transportation, Bibliographies, Materials handling, Transferring, Cost estimates, Economic analysis, Operating costs, Trucks, Site surveys, Design, Industrial plants, Capital costs, Labor estimates, Gravity conveyors, Compacting, Hydraulic equipment.
Identifiers: *Solid waste disposal, Solid waste storage.

Presented is a state-of-the-art report on highway transportation systems for solid waste. It traces their historical development in the United States, economic justification for their use, basic design and location considerations, and basic cost criteria for constructing, owning, and operating. The report deals only with truck-to-truck transfer systems-- i.e., from route-collection vehicles to large-capacity transfer vehicles. Basically, two categories of these transfer systems are discussed: direct-dump and compaction. An extensive bibliography and specific appendixes are included. (Author)

Prepared in cooperation with Illinois Univ., Urbana.
Paper copy available from GPO $0.65 as EP3.2:AG8.

Descriptors: (*Sludge disposal, *Irrigation), (*Fertilizing, Sludge disposal), Plant growth, Performance evaluation, Lysimeters, Farm crops, Trace elements, Soil chemistry, Nutrients.
Identifiers: *Sewage irrigation, Liquid waste disposal.

The project studied involved the possible agricultural benefits and environmental changes that would result from applying digested sewage sludge liquid to field crops. In addition, criteria are developed that can be used in selecting sites for this method of sludge disposal. The report discusses the progress made after three year's work. Since agronomic field studies require a minimum of three years to integrate seasonal effects with measured parameters, the longer the duration of a field study, the greater the confidence level of the results. Therefore, only one year of data--detailed climatic measurements, runoff and drain water analyses, and sludge applications--were collected from a lysimeter facility.

Identifiers: *Chemical vapor deposition, *Solid waste disposal, Disposable containers.

The report discusses the development of a water-soluble glass container which has high potential for reducing the container solid waste problem. The report is divided into three parts. In the first a method of coating water soluble silicate glasses with oxide films by chemical vapor depositon was studied. Coatings of silica, titania, and other oxides were readily obtained by pyrolytic decomposition of organic ester vapors. The coating techniques are described. In the next section, a method for mechanically testing sodium silicate glass by the bending test is presented. Finally, the reate of reaction of soluble silicate glasses with aqueous solutions was studied. The apparati used in studying the rate of reaction is described.

COMPREHENSIVE STUDIES OF SOLID WASTE MANAGEMENT.
Annual rept. no. 3.

1971, 210P
Grant G06-EC-00260
Paper copy available from GPO $1.75 as stock no. 5502-0023.

Descriptors: (*Waste disposal, *Reviews), (*Anaerobic processes, Waste disposal), (*Biodeterioration, Waste disposal), (*Incinerators, Waste disposal), (*Regional planning, Waste disposal), Economic analysis, Management planning, Operations research, Digestion (Decomposition), Agricultural wastes, Newsprint, Wood wastes, Enzymes, Combustion, Cost analysis, California, Engineering drawings.
Identifiers: *Pyrolysis incineration, Manure, *Solid waste disposal, Wet oxidation.

The present report represents the continuation of the first major effort to examine the solid waste problem from the standpoint of systems analysis. An overall solid waste generation and evaluation model was developed, demonstrating interrelationships between land use, technology, economics, population, and other system elements. Practical implications were drawn from this model, as they relate to planning, public health, and application of technology. The following topics are discussed: Planning and economics; Operations research in solid wastes; Anaerobic digestion; Biological fractionation of solid wastes; Incineration -- pyrolysis-combustion; Wet oxidation of organic solid waste materials.

HIGH-PRESSURE COMPACTION AND BALING OF SOLID WASTE.
Final rept.,
Karl W. Wolf, and Christine H. Sosnovsky. 1972, 179p* EPA-SW-32D
Grant DO1-UI-00170
Paper copy also available from GPO $1.75 as stock no. EP1.17:32D.

Descriptors: (*Waste disposal, *Compacting), (*Bailing, Waste disposal), (*High pressure compressors, Waste disposal), Performance evaluation, Bales, Materials handling, Tests, Refuse disposal, Garbage disposal, Papers, Stability, Rail transportation, Cargo transportation.
Identifiers: *Solid waste disposal.

The report documents some initial experiments in this country on the high-pressure compaction of municipally collected solid wastes. The application of high-pressure compaction has been examined experimentally and theoretically in quite some detail and appears to be a process which can be applied on a production scale with many attendant advantages. It has been demonstrated that stable bales can be produced by the high-pressure (2000 to 3500 psi applied pressure) compaction of loose and sacked household refuse; and that these bales can successfully survive the handling and shocks associated with comparatively long (up to 700 miles) rail-haul trips.

EFFECTS OF FUEL ADDITIVES ON AIR POLLUTANT EMISSIONS FROM DISTILLATE-OIL-FIRED FURNACES,
G. B. Martin, D. W. Pershing, and E. E. Berkau.
Jun 71, 82p* AP-87
Paper copy available from GPO $0.50 as stock no. 5503-0021.

Descriptors: (*Air pollution, Combustion products), (*Fuel additives, *Combustion products), (*Fuel oil, Fuel additives), (*Furnaces, Air pollution), Reviews, Distillates, Particles, Nitrogen oxides, Oil burners, Tests, Sulfur dioxide, Carbon monoxide, Hydrocarbons, Sulfur trioxide, Gas analysis.
Identifiers: *Air pollution control.

The available literature was surveyed, and samples of all known additives procured. Each additive was analyzed for elemental composition to provide a basis for testing. A standard screening procedure was established to test the effect of each additive on emissions from fuel oil combustion. Screening tests were carried out on all distillate soluble additives. The most promising additives were then subjected to a rigorous examination. Fuel additives are not a promising way of reducing air pollution from distillate oil combustion. A majority of the additives tested had no beneficial effects on air pollutant emissions; in fact, some additives even increased total particulate and NO (x) emissions. Several of the metal-containing additives, e.g., Ferrocene, CI-2, and Puelco SO3, reduced total particulate emissions; however, the unknown toxicity of new emissions they create makes their use questionable. Further, there is evidence that for distillate oils, burner modifications are a more suitable route to air pollution control. (Author)

PILOT SCALE UP OF PROCESSES TO DEMONSTRATE UTILIZATION OF PULVERIZED COAL FLYASH MODIFIED BY THE ADDITION OF LIMESTONE-DOLOMITE SULFUR DIOXIDE REMOVAL ADDITIVES.
Final rept.

Oct 71, 109p* EPA-R2-72-027
Contract CPA-70-66

Descriptors: (*Waste disposal, Fly ash), (*Fly ash, Utilization), (*Cements, Fly ash), (*Mineral wool, Fly ash), (*Fertilizers, Fly ash), Sources, Air pollution, Inorganic manmade fibers, Soil stabilization, Bricks, Flotation, Calcium silicates, Construction materials, Soil cement, Heat treatment, Neutralizing, Stabilizers (Agents), Trace elements, Combustion products, Byproducts.
Identifiers: *Solid waste disposal, *Air pollution control, *Waste gas recovery, Limestone injection.

Bench-scale experiments to examine methods for potential use of modified flyash indicate that this ash, the solid by-product resulting from the limestone/dolomite process for fixing gaseous sulfur oxides as solid sulfates, can be considered a suitable raw material for a number of new products and processes. The most promising methods of utilization incorporating the total use of modified flyash are the production of calcium-silicate and cement-like structural products, high temperature production of materials such as mineral wool insulation, and the use of modified flyash as a soil stabilizer and amendment. Other use areas were examined and are mentioned; also, several process problems and limitations are discussed. (Author)

Interim rept.,
N. Thomas Neff. 1972, 90p* EPA-SW-47D.1-72
Grant G06-EC-00194

Descriptors: (*Waste disposal, *Materials recovery), Iron, Paper, History, Industrial plants, Industrial engineering, Cost estimates, Operating costs, Capital costs, Comminution, Wet mills, Cyclone separators, Magnetic separators, Incinerators, Fluidized bed processing, Sludge disposal, Metal scrap, Ohio.
Identifiers: *Solid waste disposal, Franklin (Ohio), *Metal recycling, *Paper recycling.

The Franklin, Ohio, resource recovery demonstration project has elicited widespread interest, so the report was prepared to present a preliminary analysis of the solid waste disposal and fiber recovery portions of the project and to provide preliminary data by which others may be guided in evaluating emerging solid waste disposal and resource recovery technologies. The historical development of the project and a general description and evaluation of the process used are included. The preliminary plant economics presented are based on construction costs and the first six months of operation. The plant is now in regular operation recovering ferrous metals and paper fibers which are sold to local industries.

THE RIVER BASIN MODEL: THE SOCIAL SCIENCE LABORATORY.
Water pollution control research series.

Dec 71, 277p W73-02853
Contract EPA-14-12-959
Paper copy available from GPO $2.00 as EPI.16.16110FRU12/71-13.

Descriptors: (*River basins, Mathematical models), (*Social sciences, Education), (*Education, *Environmental engineering), Regional planning, Computer programming, Economic factors, Sociometrics, Government policies, Water resources, Laboratories.
Identifiers: *River Basin model.

The RIVER BASIN MODEL delineates an entire regional system and its interaction with water one of its subsystems. Presented is a gaming-simulation, City Model, designed to provide college-level social science students with an educational technique which reverts to a more personalized education (computer assisted laboratory) and at the same time allows society to remain undisturbed by the learning process. In the model, participants are decision-makers in one of three sectors: economic, social or governmental. A starting scenario briefly describes problems, issues, growth characteristics, housing, schools, etc. in the simulated metropolitan area. The computer records participant decisions for each round and regularly provides printouts showing the interaction of decisions and their influence during the run. (Author)

SATELLITE VEHICLE WASTE COLLECTION SYSTEMS,
James E. Delaney. 1972, 18p* EPA-SW-82ts-1
Summary of report dated 1971, PB-197 931.
Paper copy available from GPO $0.20 as EPI.17:82TS.1.

Descriptors: (*Refuse disposal, *Trucks), (*Urban planning, *Waste disposal), Collecting methods, Garbage disposal, Cost estimates, Labor estimates, Operating costs, Cost comparison, Depreciation, Indirect costs, Productivity.
Identifiers: *Solid waste disposal.

The report summarizes the findings derived from an in-depth study (PB-197 931) of a comparatively new technique being used to collect residential solid wastes. The system's operational details are presented and compared to more conventional methods. The relative efficiencies achieved by private and municipal operators are also outlined. The method involves the use of small, 3- or 4-wheeled vehicles that shuttle between dwelling unit storage points and a packer truck, which later takes the waste to a disposal site. The vehicles reportedly produce the best results in low- to medium-density housing areas where single-family homes predominate.

ENVIRONMENTAL PROTECTION AGENCY (EPA) RESEARCH AND DEVELOPMENT ACTIVITIES WITH OXYGEN AERATION,
John B. Stamberg. 2 Mar 72, 45p
Proceedings of Technology Transfer Design Seminar for Municipal Wastewater Treatment Facilities, New York, 29 Feb-2 Mar 72.

Descriptors: (*Activated sludge process, *Oxygenation), (*Sewage treatment, Oxygenation), Oxygen, Process variables, Field tests, Clarification, Settling, Performance evaluation.

The author discusses the results of testing an activated sludge process using pure oxygen aeration. Described are the results from New York City's Batavia plant and Washington, D.C.'s Blue Plains plant. The operating variables are presented along with the effects that oxygenation has on clarification.

NEW TECHNOLOGY FOR WATER POLLUTION CONTROL,
David G. Stephan, and John J. Convery. May 71, 32p

Descriptors: (*Water pollution, Reviews), Sewage treatment, Industrial waste treatment, Agricultural wastes, Oils, Mine waters, Surface water runoff.
Identifiers: Water pollution control, Oil pollution control, Mine acid drainage, Technology transfer.

The authors review, in a very general manner, the large number of water pollution control techniques available for various pollution sources. They are concerned with the transfer of technology within and outside of the water pollution field. The discussion includes sewage treatment, industrial waste treatment, agricultural waste treatment, urban runoff water treatment, oil pollution prevention, and mining waste control.

THE NIAGARA RIVER POLLUTION ABATEMENT PROGRESS - 1971.
Summary rept. 1967-1971.

Aug 71, 65p

Descriptors: (*Niagara River, *Water pollution), (*New York, Water pollution), (*Canada, Water pollution), Water quality, Regional planning, Industrial wastes, Sewage, International relations, Trends.
Identifiers: Ontario (Canada), Water pollution abatement, Sewage treatment effluents.

The report reviews the progress of water pollution abatement and water quality improvement in the Niagara River region by New York State and the Province of Ontario. The topics include: General characteristics of the river area; Objectives; Pollution problems; Programs in effect to abate pollution; Municipal and industrial pollution abatement status; and, The expected improvement in Niagara River water quality.

NEUTROLOSIS TREATMENT OF ACID MINE DRAINAGE,
Ronald D. Hill, Roger C. Wilmoth, and Robert B. Scott. 1971, 14p EPA-WQO-14010-05/71

Descriptors: (*Mine waters, *Osmosis), (*Neutralizing, Mine waters), (*Water pollution, Mine waters), Sludge disposal, Brines, Performance evaluation, Iron, Membranes, Cellulose acetate, Feasibility, Calcium oxides.
Identifiers: *Mine acid drainage, *Water pollution control, *Reverse osmosis.

The report summarizes recent research on the treating of acid mine drainage. Two processes are combined. Reverse osmosis is used followed by cycling the resulting brine through a neutralization plant. The clarified water from here is then blended into the reverse osmosis feed. The process extracts 98 plus percent of the water and produces a sludge suitable for disposal through landfill.

SKI MOUNTAIN: A CONCEPTUAL FEASIBILITY STUDY IN SOLID WASTE MANAGEMENT.
Final rept.

1972, 337P* EPA-SW-46D-72
Grant G06-EC-00163

Descriptors: (*Waste disposal, Earth fills), (*Mountains, *Earth fills), (*Urban planning, Waste disposal), (*Skiing, Earth fills), Industrial wastes, Refuse disposal, Sources, Site surveys, Recreational facilities, Illinois, Design, Erosion control, Vegetation, Cargo transportation, Hauling, Materials handling, Cost estimates, Financing.
Identifiers: *Solid waste disposal, *Chicago (Illinois), Cook County (Illinois), *Sanitary landfills.

The report is the result of a study initiated to determine the conceptual feasibility of disposing of solid wastes generated within Cook County, Illinois, by constructing a 1,000-foot-high mountain that would eventually be used for a number of recreational purposes. The site finally selected is, therefore, 33 miles from Chicago's Loop and straddles the boundary between Will and Grundy Counties; it covers 11 square miles. The factors discussed and evaluated include waste generation rates, site selection procedures, design problems (subsurface conditions, structural stability, decomposition products, cover material requirements, etc.), various forms and combinations of transportation, receiving and processing equipment, costs, financing, and administration. SUSPENDED SOLIDS REMOVAL,
James F. Kreissl. 1971, 21p
Presented at the Technical Seminar/Workshop on Advanced Waste Treatment, Chapel Hill, N.C., 9-10 Feb 71.

Descriptors: (*Suspended sediments, *Sewage treatment), (*Sewage filtration, Suspended sediments), Reviews, Sedimentation, Settling, Performance evaluation, Design, Cost estimates.
Identifiers: *Microstraining.

Suspended solids removal is a necessary consideration in all waste treatment operations. Solids which must be removed may be those present in the raw sewage, those added by some form of recycle within the plant, or those created by biological or chemical actions during treatment. Suspended solids, unlike many other pollutants, vary widely in their chemical and physical makeup. Tertiary removal of suspended solids from a waste stream may also accomplish an increase in organic removal necessary to meet effluent standards due to the organic nature of some of the solids. The discussion is limited to only three available tertiary processes which may be used for upgrading the efficiency of existing treatment facilities. These processes are microstraining, high-rate sedimentation, and granular in-depth filtration.

EVALUATION OF SHAVERS FORK MINE SEALS,
Robert B. Scott. Sep 71, 42p* EPA-14010-09/71

Descriptors: (*Abandoned coal mines, *Sealing), (*Seepage, Measurement), (*Seals, Effectiveness), Water pollution, Inorganic acids, Sulfates, Iron inorganic compounds, Masonry, Calcium oxides, Acidity, Periodic variations, Inspection.
Identifiers: Shavers Fork (West Virginia).

At Bowden, West Virginia, a fish kill occurred in a hatchery in the spring of 1966, reportedly from acid mine drainage flushing out of several abandoned underground coal mines. The West Virginia Department of Mines air sealed several small underground mines in the Taylor Run, Red Run, and Fishing Hawk mining areas by constructing cement block-type air and dry seals at the portals. Since November 1967 seasonal samples have been collected at these seals and analyzed. A report is made on the findings.

SIMULTANEOUS QUANTITATION OF SALMONELLA SPECIES AND PSEUDOMONAS AERUGINOSA. I. POLLUTED WATERS. II. PERSISTENCE OF PATHOGENS IN SLUDGE TREATED SOILS. III. ANALYSIS OF WASTE TREATMENT SLUDGES FOR SALMONELLA SPECIES A S A SURVEILLANCE TOOL,
Bernard A. Kenner, G. Kenneth Dotson, and James E. Smith. Sep 71, 43p

Descriptors: (*Water pollution, *Bacteria), (*Water analysis, *Salmonella), (*Soil microbiology, Salmonella), (*Sludge, Salmonella), (*Pseudomonas, Water analysis), Residues, Irrigation, Sludge disposal, Disinfection, Cultures (Biology), Public health.
Identifiers: Pathogens, Sewage irrigation, *Water pollution detection.

The report is divided into three sections. In the first a practical sensitive quantitative method for the isolation and enumeration of Salmonellae and pyocyanogenic Ps. aeruginosa from wastewaters, treatment effluents, streams, stormwater runoff, and sludges, in all seasons of the year, is described. Next the persistence of Salmonella species, Pseudomonas aeruginosa, and fecal coliforms in soils treated with various types of municipal sludges is reported. In the last report it is suggested that a more complete and useful surveillance of salmonellosis for large urban areas can be attained by analysis monthly of municipal primary and secondary waste treatment plant sludges.

FUNDAMENTAL DESIGN CONCEPTS FOR THE LIME STABILIZATION OF LEBANON RAW SLUDGE,
James E. Smith, Jr., and S. W. Hathaway. 6 Apr 71, 10p

Descriptors: (*Sludge disposal, *Chemical stabilization), (*Sewage treatment, Sludge disposal), Calcium oxides, pH control, Cost estimates, Filtration, Sludge dewatering, Earth fills.
Identifiers: *Sludge treatment.

In a plant scale study at Lebanon, Ohio, the improvement of the treatment and phosphorus removal were undertaken. On the basis on an economic analysis, it was proposed to treat the raw sludge by lime addition to a pH 11.5 This raw sludge was produced by clarification of raw wastewater that has been coagulated with either aluminum sulfate or ferric chloride. The limed sludge was then drained on sand drying beds, and the cake either given to local farmers or placed in a sanitary landfill. This process replaces the need for biological digestion. Two factors, that of a voluminous and dilute sludge, complicates the handling requirements. Cost savings are discussed.

DENITRIFICATION BY ANAEROBIC FILTERS AND PONDS.
Water Pollution Control research series rept.

Apr 71, 81p EPA-WQO-13030-ELY-04/71-8

Descriptors: (*Tile drains, Water pollution), (*Anaerobic processes, Chemical removal (Water treatment)), (*Subsurface drainage, Water Pollution), (*Water pollution, *Inorganic nitrates), Biodeterioration, Agricultural wastes, Irrigation, Cost estimates, Feasibility, Reduction (Chemistry), Performance evaluation, Water filters, Pilot plants.
Identifiers: *Water pollution control, *Denitrification, Anaerobic lagoons, Denitration.

The removal of nitrogen from tile drainage by means of bacterial reduction was investigated. The major nitrogen form in tile drainage is nitrate (approximately 98 percent). The process required that an organic carbon source be added to the waste to accomplish reduction of the nitrogen. The bacterial process was used in two configurations, anaerobic filters and anaerobic deep ponds. The projected costs for both processes are approximately 90 dollars per million gallons.

NEUTRADESULFATING TREATMENT PROCESS FOR ACID MINE DRAINAGE.

Dec 71, 116p EPA-WQO-14010-DYH-12/71
Contract EPA-14-12-518
Paper copy available from GPO $1.00 as EP1.16: 14010DYH 12/71.

Descriptors: (*Mine waters, *Ion exchanging), (*Neutralizing, Mine waters), (*Water pollution, Mine waters), Sulfation, Precipitation (Chemistry), Carbonates, Cation exchanging, Sulfates, Barium sulfates, Performance evaluation, Engineering drawings, Iron.
Identifiers: *Mine acid drainage, *Water pollution control.

A process has been developed for treatment and removal of major pollutants in surface streams of Appalachia caused by acid mine drainage. The raw water is neutralized with sodium bicarbonate to precipitate iron and aluminum, followed by cation exchange to remove sulfate. Barium is eluted from the exchange resin and reacts with sulfate in the water to form a precipitate. Barium is recovered from the precipitate and is processed to recharge the exchange resin. The water is further treated to remove hydrogen sulfide by conversion to sulfur as a saleable byproduct. The process minimizes the cost of sludge and waste disposal while offering a product water meeting the highest interstate water quality standards. Treatment costs are given. (Author)

TREATMENT OF FERROUS IRON ACID MINE DRAINAGE BY REVERSE OSMOSIS,
Roger C. Wilmoth, Donald G. Mason, and Mahendra Gupta. 1972, 42p
Presented at the Symposium on Coal Mine Drainage Research (4th), Pittsburgh, Pa., 26 Apr 72. Prepared in cooperation with Rex Chainbelt, Inc., Milwaukee, Wis.

Descriptors: (*Water pollution, Mine waters), (*Osmosis, *Mine waters), Field tests, Fouling, Membranes, Performance evaluation, Comparisons, Ultraviolet radiation, pH, Flux (Rate), Salt water, Iron, Manganese, Oxidation.
Identifiers: *Mine acid drainage, *Reverse osmosis, *Water pollution control, Tubular membranes, Hollow fiber membranes, Spiral wound membranes, Iron bacteria.

In previous research, reverse osmosis treatment of a ferrous iron mine discharge at Mocanaqua, Pennsylvania was studied. Using a tubular system, a loss of 90 percent of the original product flow in 400 hours of operation due to iron fouling was observed. Though sodium hydrosulfide flushes were successful in flux restoration, fouling immediately recurred upon resumption of operation on the ferrous water. To investigate the Mocanaqua fouling phenomena, field studies were undertaken. Reported are the results of the tests and comparisons with a spiral wound and hollow fiber reverse osmosis unit studied at the same time.

SINGLE STAGE HIGH PH LIME CLARIFICATION AND CARBON TREATMENT OF MUNICIPAL WASTEWATER,
Roland V. Villers. Oct 71, 13p

Descriptors: (*Sewage treatment, *Clarification), (*Chemical removal (Sewage treatment), *Phosphorus inorganic compounds), (*Activated carbon treatment, Sewage treatment), Calcium oxides, pH control, Performance evaluation, Nutrients, Dissolved organic matter, Cost estimates.
Identifiers: *Physical chemical treatment.

Previous work at the Lebanon Pilot Plant Facility in Ohio has shown that single stage lime clarification at pH 9.5 will remove 90% or more of the phosphorus present in either primary or, secondary effluent but only 70% of the phosphorus present in raw wastewater. Subsequent bench studies indicated that to achieve 90% phosphorus removal from raw wastewater it is necessary to lime to a pH of 11. The report presents the results of the pilot study that followed in which raw wastewater was lime clarified at pH 11 and then granular carbon treated. (Author)

LAND SPREADING, A CONSERVING AND NON-POLLUTING METHOD OF DISPOSING OF OILY WASTES,
G. K. Dotson, R. B. Dean, W. B. Cooke, and B. A. Kenner. 1972, 16p
Presented at the International Water Pollution Research Conference (5th), San Francisco, Calif., Jul/Aug 70.

Descriptors: (*Petroleum industry, Waste disposal), (*Waste disposal, Oils), Land use, Industrial wastes, Water pollution, Refineries, Soil microbiology, Biodeterioration, Bacteria, Fungi.
Identifiers: *Oil wastes, *Oil pollution control, *Liquid waste disposal, *Water poilution control.

Disposal of concentrated wastes is a problem of increasing concern. Some of the most complex wastes are those associated with petroleum. Extracting, transporting, refining, and selling of the petroleum porducts are operations with potential for polluting water. Dredging oil sludge from channels and harbors may pollute lakes and streams when the sludge is dumped back into open water. The paper discusses land spreading operations for oily waste disposal by three refineries.

HYDROLYSIS OF ACTIVATED SLUDGE,
R. B. Dean, and R. J. Bouthilet. 1972, 13p
Presented at the International Water Pollution Research Conference (5th), San Francisco, Calif., Jul/Aug 70. Prepared in cooperation with Snell (Foster D.), Inc., Florham Park, N.J.

Descriptors: (*Industrial waste treatment, *Food processing), (*Activated sludge process, *Hydrolysis), (*Sludge disposal, *Feeding stuffs), Sulfur dioxide, Dissolving, Byproducts, Filtration, Molasses, Cost estimates, Livestock.
Identifiers: *Meat packing industry, Sludge treatment, *Water pollution control.

Many pollution experts agree that the limiting operation in a modern sewage disposal plant is the disposal of the solids which accumulate as a result of various separation procedures. Of particular concern is the disposition of activated sludge which is the solids residue resulting from aerobic digestion of soluble or non-settleable solids in sewage. The paper describes the results of a research program in which techniques of hydrolysis and solubilization of meat scrap to the solubilization of activated sludge is described using SO2 as the hydrolytic agent.

CONTROL OF MERCURY POLLUTION IN SEDIMENTS,
Curtis C. Harlin, Jr. Sep 72, 61p* W73-02632, EPA-R2-72-043
Contract EPA-68-01-0087

Descriptors: (*Water pollution, *Mercury), (*Sediments, Mercury), Water chemistry, Materials recovery, Particle size, Roasting, Leaching, Hydrometallurgy, Waste disposal, Covering, Metal scrap, Iron, Hypochlorites, Mercury organic compounds.
Identifiers: *Water pollution control, Junk car disposal, Mercury/methyl.

Methods are described for controlling pollution from mercury-laden sediment deposits on the bottom of streams and lakes. Five sediment samples containing from 6 ppm to 500 ppm mercury were investigated. A variety of methods for recovering the mercury values from dredged sediments were explored. Density fractionation, particle size fractionation, flotation, roasting and leaching were the methods studied. Roasting and chemical leaching afford the greatest promise for inexpensive removal and recovery of the mercury. The use of an iron overlay in the form of crushed automobile bodies topped with sand could be an inexpensive and effective method of isolating mercury-containing sediments from a water overlayer. An important attraction of using iron as an overlay is its ability to reduce methylmercury ions as well as mercuric ions to elemental mercury. (Author)

COMBINATION LIMESTONE-LIME TREATMENT OF ACID MINE DRAINAGE,
Roger C. Wilmoth, Robert B. Scott, and Ronald D. Hill. 27 Apr 72, 23p*
Presented at the Symposium on Coal Mine Drainage Research, (4th), Pittsburgh, Pa., 27 Apr 72. Prepared in cooperation with Norton Mine Drainage Field Site, W. Va.

Descriptors: (*Mine waters, *Neutralizing), (*Water pollution, Mine waters), Limestone, Calcium oxides, Iron, pH control, Process charting, Sludge, Cost estimates, Field tests.
Identifiers: *Mine acid drainage, *Water pollution control.

The research investigated treatment methods for ferric iron acid mine drainage. One of the most promising techniques studied was combination limestone-lime neutralization. To date, neutralization has been shown to be the most economical treatment method to remove iron, aluminum, and acidity. Lime treatment has received the majority of research attention. However, limestone treatment offers several distinct advantages over lime; namely higher density, lower volume sludges, cheaper raw material costs, easier handling. Conversely, the biggest disadvantages to limestone are its relatively inefficient reaction rate. In an effort to cover a broader spectrum of application, the report discusses the combination of the two processes.

THE THREE SLUDGE SYSTEM FOR NITROGEN AND PHOSPHORUS REMOVAL,
M. C. Mulbarger. Apr 72, 59p*
Presented at the Annual Conference of the Water Pollution Control Federation (44th) Held in San Francisco, Calif., Oct 71.

Descriptors: (*Sewage treatment, *Chemical removal (Sewage treatment)), (*Nitrogen inorganic compounds, Chemical removal (Sewage treatment)), (*Phosphorus inorganic compounds, Chemical removal (Sewage treatment)), Nitrification, Activated sludge process, Alums, Nutrients, Precipitation (Chemistry), pH control, Biochemical oxygen demand, Methyl alcohol, Suspended sediments, Process variables, Performance evaluation.
Identifiers: Denitrification, Chemical oxygen demand.

Three sludge (carbon removal, nitrification and denitrification) system with alum addition for phosphorus removal was evaluated. Eight months of performance data from a 0.2 mgd pilot plant, operating with diurnal flow variations over a nominal liquid temperature range of 10 to 20C, are presented. Performance data for the soluble phase (COD, nitrogen and phosphorus), solids phase (solids characterizations and unit solids production values) and miscellaneous considerations (temperature, pH, alkalinity depletion, etc.) are also presented. Split chemical treatment with alum and optimum pH values will result in optimum system performance and the least amount of precipitated inorganic solids. Soluble phosphorus residuals as low as 0.1 mg/l can be easily achieved with an additional inorganic solids production of about 40 to 60 mg/l. (Author)

COST AND SUPPLY ANALYSIS FOR ALUM AND METHANOL USED IN WASTEWATER TREATMENT,
Robert Smith, and Walter F. McMichael. Aug 71, 32p*

Descriptors: (*Alums, Production capacity), (*Methyl alcohol, Production capacity), (*Sewage treatment, Supplies), Resources, Demand (Economics), Forecasting, Consumption, Cargo transportation, Raw materials, Bauxite, Phosphate deposits, Natural gas, Cost analysis.

At the end of the 70's, it is hoped to have most sewage plants removing nitrogen and phosphorus. At the present time, alum is used for phosphorus removal and methanol for nitrogen removal. The report looks at the impact this increased usage will have upon the manufacturing capability of alum and methal producers as well as trucking industry.

REPORT ON EVALUATIONS OF WASTE SOURCES IN THE CALCASIEU RIVER BASIN, LOUISIANA.
Jan 72, 236p

Descriptors: (*Calcasieu River Basin, *Water pollution), (*Louisiana, Water pollution), Industrial wastes, Refineries, Petroleum industry, Regulations, Water quality, Concentration (Composition), Law enforcement, Inventories, Lake Charles, Paper industry, Chemical industry.
Identifiers: Water pollution standards, Water quality data, Petrochemical industry.

In the southwestern corner of Louisiana -- in the Calcasieu River Basin -- is the State's second largest industrialized area. All of these industries are discharging waste waters into the Calcasieu River or its tributaries. The report presents a study to compile an up-to-date inventory of industrial waste sources; Ascertain types of treatment presently provided and the quality and quantity of each industrial waste discharge; Evaluate the individual and collective impacts of wastewater; and Determine abatement proceedings necessary or warranted under applicable local, State and Federal laws.

NUTRIENT REMOVAL FROM WASTEWATER BY PHYSICAL-CHEMICAL PROCESSES,
Jesse M. Cohen. Mar 71, 50p*

Descriptors: (*Sewage treatment, *Chemical removal (Sewage treatment)), (*Nitrogen inorganic compounds, Chemical removal (Sewage treatment)), (*Phosphorus inorganic compounds, Chemical removal (Sewage treatment)), Reviews, Nutrients, Performance evaluation, Cost estimates, Inorganic phosphates, Inorganic nitrates, Precipitation (Chemistry), Cost estimates, Adsorption, Aluminum oxides, Lanthanum, Ion exchanging, pH control, Chlorination, Chemical reactions, Calcium oxides.
Identifiers: Secondary sewage treatment, Tertiary sewage treatment, *Physical chemical treatment, Ammonia stripping.

The paper considers the more promising advanced waste treatment methods which have been

developed, or are being developed, for removal of phosphorus and nitrogen from wastewater. The discussion is restricted to the physical-chemical processes. Only domestic or domestic-industrial wastewaters are considered, although the processes described may be equally applicable to industrial waste discharges. The report is of special interest to those wishing general information the the processes available and the costs involved.

Report on Bio-Engineering Aspects of Agricultural Drainage, San Joaquin Valley, California.
Paper copy available from GPO $0.60 as EP1.16: 13030-ELY 6/71-10.

Descriptors: (*Surface drainage, *Nutrients), (*Water pollution, *Inorganic nitrates), (*Aquatic plants, Nutrients), Algae, Grasses, California, Agricultural wastes, Anaerobic bacteria, Dissolved gases, Oxygen, Cost estimates, Barley, Temperature, Ponds, San Joaquin Valley.
Identifiers: *Denitrification, *Nutrient removal, *Water pollution control.

Three methods to remove nitrates from the agricultural drainage water from the San Luis Service Area in California were investigated. One method was a theoretical evaluation of nitrate removal by algae during the transport of the drainage water in the San Luis Canal or during storage in the Kesterson Reservoir. The other methods were designed to promote anaerobic bacterial denitrification in a continuous flow of drainage water. One method used barley straw and the other water grass grown in shallow ponds as the carbon energy source. Under optimum conditions both of these last two methods reduced the nitrate -N concentration of the drainage water from a maximum of about 30 mg/l to less than 2 mg/l. The cost of nitrogen removal by the shallow grass plot systems, the most economical and feasible method investigated, was estimated.

TREATMENT CAPABILITY OF A PHYSICAL--CHEMICAL PACKAGE PLANT,
J. F. Kreissl, and J. M. Cohen. Apr 71, 38p

Descriptors: (*Sewage treatment, *Activated carbon treatment), Coagulation, Adsorption, Clarification, Turbidity, Phosphorous, Chemical removal (Sewage treatment), Disinfection, Ultraviolet radiation, Color, Microorganism control (Sewage), Alums, Iron sulfate, Cost estimates.
Identifiers: Physical chaemical treatment, Chemical oxygen demand.

A short-term study of a commercially-available physical-chemical waste treatment plant is reported. Results indicate that an excellent quality of effluent can be consistently obtained despite wide fluctuations of influent wastewater characteristics. Physical, chemical, and biological parameters were monitored. The short-term data obtained offer some evidence of superior treatment efficiency in terms of COD, color, turbidity, and phosphorus removals when compared to more conventional treatment methods. DENSITY INDUCED MIXING IN CONFINED AQUIFERS.
Final rept.,
L. W. Gelhar, J. L. Wilson, J. S. Miller, and J. M. Hamrick. Mar 72, 133p* EPA-WQO-16060-ELJ-03/72

Descriptors: (*Ground water recharge, Aquifers), (*Aquifers, Mixing), Artesian water, Water storage, Underground storage, Water quality, Recharge wells, Density (Mass/volume), Water flow, Approximation, Gravity, Mathematical prediction.

Analytical techniques are developed to describe the mixing between two fluids of different density in a confined aquifer, in which one fluid is introduced to the aquifer by well recharge. The immiscible displacement process in both linear and radial flows is analyzed and the effects of longitudinal and lateral dispersion are included using a boundary layer approximation. The theoretical results demonstrate the effect of hydrodynamic dispersion in retarding gravity segregation due to density differences. The theoretical results are compared with observations of aquifer mixing in linear and radial flow laboratory models. During recharge excellent agreement between the theoretical predictions and experimental results is found and the predicted retarding effects of longitudinal dispersion are verified. During withdrawal some systematic differences between the theory and observation are noted. (Author)

STATUS OF ADVANCED WASTE TREATMENT,
I. J. Kugelman. May 72, 80p*
Presented at the Long Island Marine Resources Council, Hauppauge, Long Island, N.Y., 10 Jun 71.

Descriptors: (*Sewage treatment, *Reviews), Chemical removal (Sewage treatment), Phosphorus, Nitrogen, Nutrients, Sewage filtration, Clarification, Cost estimates, Operating costs, Calcium oxides, Precipitation (Chemistry), Alums, Activated sludge process, Nitrification, Activated carbon treatment.
Identifiers: *Tertiary sewage treatment, *Physical chemical treatment, Microstraining, Denitrification.

The Advanced Waste Treatment Program of the U.S. Environmental Protection Agency was instituted over a decade ago. The charter of this program was and still is to upgrade the state of the art of wastewater treatment technology. Program impetus was provided by recent upgrading of water quality criteria and the goal of wastewater renovation and reuse. In the report, a general review of the advanced waste treatment program is given with special emphasis on those developments that are ready for fullscale engineering application.

AIR QUALITY DATA FOR 1968, FROM THE NATIONAL AIR SURVEILLANCE NETWORKS AND CONTRIBUTING STATE AND LOCAL NETWORKS.

Aug 72, 241p* APTD-0978

Descriptors: (*Air pollution, United States), Tables (Data), Particles, Metals, Carbon monoxide, Nitrogen oxide (NO), Nitrogen dioxide, Sulfur dioxide, Hydrocarbons, Oxidizers, Concentration (Composition), Rural areas, Urban areas, Diurnal variations, Pyrenes, Ammonium compounds, Fluorides, Inorganic nitrates, Sulfates.
Identifiers: *Air quality data, Air pollution sampling, Soiling index, National Air Surveillance Networks, Benzopyrene, Continuous air monitoring projects.

Particulate- and gaseous-pollutant data gathered during 1968 by the cooperating stations of the various National Air Surveillance Networks provide information about air quality in the United States. Data from independent state and local sampling networks that have contributed their results to the National Aerometric Data Bank are included. Data are presented on suspended particulate pollutants, including data on benzene-soluble organic fractions and on metallic and nonmetallic inorganic constituents; on soiling index; and on gaseous pollutants. Data are given separately for urban and nonurban sites. Annual arithmetic or geometric means of 24-hour average concentrations measured by the Hi-Vol Network and the Gas Sampling Network are presented. The minimum detectable concentrations for each of the 16 metals and 4 nonmetallic inorganic ions are listed. The distribution by population of 1968 annual averages for total particulate, nitrogen dioxide, and sulfur dioxide are presented; gaseous pollutant data for the six Continuous Air Monitoring Projects for the period 1964 through 1968 are reported. Report on Environmental Health Effects Research.

Descriptors: (*Humans, Adaptation), (*Air pollution, Carbon monoxide), (*Public health, Air pollution), Exercise (Physiology), Males, Hemoglobins, Blood, Stress (Physiology), Respiration, Toxicity, Oxygen consumption, Hypoxia.
Identifiers: *Carbonylhemoglobin.

Normal, young, non-smoking men were studied at rest and during submaximal exercise with carboxyhemoglobin (COHb) levels of about 1% and after breathing CO to raise the COHb level to 8 to 9%. Arterial and mixed venous blood was sampled. CO caused an increase in minute volume and breathing frequency during exercise but not at rest. CO caused no changes in cardiac output, heart rate, lactate, lactate/pyruvate ratio, tidal volume, CO2 output or 2,3 DPG during rest or exercise. CO caused a decrease in O2 consumption, in arterial-venous O2 content difference and in venous O2 content and venous Po2 during exercise and in the latter two also at rest. Changes in O2 affinity are still being calculated.

EPA-12020-EEQ-10/71
Paper copy available from GPO $1.75 as EP1.16:12020 EEQ 10/71.

Descriptors: (*Chemical industry, Industrial waste treatment), (*Brines, *Industrial waste treatment), (*Activated sludge process, Brines), Glycols, Solvent extraction, Amines, Activated carbon treatment, Oxidation, Biodeterioration, Pilot plants, Performance evaluation, Design criteria, Cost estimates.
Identifiers: Propane diol/chloro-1-2, *Chlorohydrins, *Water pollution control, Biological industrial waste treatment.

A number of extremely useful and widely produced compounds are produced by the alkaline hydrolysis of chlorohydrins such as ethylene and propylene glycols and glycerin. The brine wastewater resulting from the production of the glycols is characterized by a high salt content (8-10% NaCl), excess alkalinity, and the presence of several organic compounds. Several processes were examined in the laboratory to determine the usefulness for the treatment of the brine wastewater. The processes tried included solvent extraction of the glycol wastewater with secondary or tertiary amines; adsorption of glycols on activated carbon; biological oxidation of propylene glycol wastewater; and an activated sludge process. Only the last was successful. The operational and design parameters determined from a pilot plant operation were used to design an activated sludge plant to treat 6 MGD of wastewater resulting from the production of 1.2 million pounds per day of propylene glycol. Costs are given.

SUBLETHAL EFFECTS OF CRUDE OIL ON LOBSTER (HOMARUS AMERICANUS) BEHAVIOR.
Technical rept. May 71-Apr 72,
Jelle Atema, and Lauren Stein. Sep 72, 81p*
WHOI-72-74

Descriptors: (*Lobsters, Oils), (*Water pollution, Oils), (*Shellfish, Water pollution), Animal behavior, Feeding habits, Chemoreceptors, Olfactory organs, Hydrocarbons, Lipids, Sea water.
Identifiers: *Oil pollution, *Oil spills, Homarus americanus.

Small quantities of crude oil (0.9 milliliters in 100 liters of seawater) interfere with some specific, possibly chemosensory, behavior of the lobster, Homarus americanus. Timing of their feeding behavior showed that the delay period between noticing food and going after it doubles when oil was added. The results indicate that small quantities of oil mixed into seawater constitute a noxious, bad smell in the lobsters environment depressing his appetite and chemical excitability. Chemical analyses showed that before the addition of oil a great quantity of lipids was present in the test aquaria. When the water was brought in contact with an oil slick, the lipid concentration dropped considerably. The same effect was seen in the alkane and the alkene-aromatic hydrocarbon fractions. The fate of oil in sea water followed the usual degradation pattern.

HANDBOOK FOR ANALYTICAL QUALITY CONTROL IN WATER AND WASTEWATER LABORATORIES,
D. G. Ballinger, R. L. Booth, M. R. Midgett, R. C. Kroner, and J. F. Kopp. Jun 72, 106p*

Descriptors: (*Water analysis, Quality control), (*Chemical laboratories, Water analysis), Accuracy, Distilled water, Purity, Laboratory equipment, Glassware, Solvents, Data processing, Trace elements, Errors, Personnel development, Decision making, Management planning, Services, Water pollution.
Identifiers: Water pollution detection.

One of the fundamental responsibilities of management is the establishment of a continuing program to insure the reliability and validity of analytical laboratory and field data gathered in water treatment and wastewater pollution control activities. This handbook is addressed to laboratory directors, leaders of field investigations, and other personnel who bear responsibility for water and wastewater data. Subject matter of the handbook is concerned primarily with quality control for chemical and physical tests and measurements. Sufficient information is offered to allow the reader to inaugurate, or to reinforce, a program of analytical quality control which will emphasize early recognition, prevention and correction of factors leading to breakdowns in the validity of data. Descriptors: (*Mine waters, Mathematical models), (*Water pollution, Mine waters), Computer programs, Pyrite, Oxidation, Spoil, Coal mines, Reaction kinetics, Subsurface drainage, Hydrogeology, Digital simulation.
Identifiers: *Mine acid drainage.

A mathematical model of an acid mine drainage system has been developed for underground mines. The model relates the rate of acid formation to the rate of pollution discharge from the system. The calculational model was developed using a digital computer to simulate an existing mine as the sum of many micro scale mines. The input to the model is a physical and chemical description of the system. Day-to-day simulation requires data on temperature, rainfall, and oxygen concentration at the exposed coal face. The output of the model is estimates of daily acid load and drainage flow. The calculational model was based on a carefully described physical model so that a predictive model can be constructed with little or no experimental data. However, methods for constructing the computational model are given which can use the field data available to increase the reliability.

Identifiers: Reverse osmosis, Dissolved solids, *Water pollution control.

Investigations were made to determine the technical feasibility of desalination of tile drainage. Reverse osmosis (RO) and electrodialysis (ED) processes were studied. Two RO membrane stacks were investigated. The first, a high salt rejection, low product yield, was operated on variable quality (3000-7000 mg/l TDS) irrigation return water. The second RO stack and also the ED unit were operated on return waters that were controlled to have a 3000 mg/l TDS. The second RO stack was designed for a high product rate and low salt rejection. The ED data are based on a single pass through the membrane stack. Costs are reported.

THE EFFECTS OF AGRICULTURAL WASTE WATER TREATMENT ON ALGAL BIOASSAY RESPONSE,
Paul De Falco, Jr., Robert J. Pafford, Jr., and John R. Teerink. Aug 71, 66p DWR-174-12, REC-R2-71-9 W73-03502, EPA-13030-ELY-08/71-9
Report on 'Bio-Engineering Aspects of Agricultural Drainage, San Joaquin Valley, California'.
Paper copy available from GPO $1.00 as EPI.16:13030 ELY 08/71-9.

Descriptors: (*Water pollution, *Nitrogen inorganic compounds), (*Algae, *Nutrients), Agricultural wastes, Subsurface drainage, San Joaquin River, Bioassay, Fluorescence, Tile drains, Plant growth, Aquatic plants.
Identifiers: Nutrient requirements, Denitrification.

Laboratory bioassay experiments were performed to test the effect on algal growth of agricultural waste water before and after the waste water had been subjected to two different nitrogen removal processes. The waste waters were added in various percentages to San Joaquin River Delta water for bioassay. The algal growth throughout time was monitored by chlorophyll fluorescence techniques. The fluorescence measurements showed logarithmic growth similar to the type usually observed in the Delta Water over the vernal growth period. The laboratory experiments gave positive statistical evidence that the untreated agricultural waste water would promote substantial algal growth above that of the San Joaquin River controls. Identifiers: *Electromagnetic profiling.

A study was made of a unique radar system which produces a continuous profile of subsurface conditions showing depth and location of geological formations and buried utilities. Information is obtained by sending electromagnetic pulses into the earth and then receiving the reflected pulses from interfaces and objects. The unit travels at 3mph, and can detect interfaces directly below it to depths of 10 feet in clay and 25 feet in sand. Depth of penetration is governed by conductivity and dielectric constant. Water content influences these soil parameters; an increase in water content decreases penetration. The penetrability of the soil determines the maximum depth at which pipes can be detected. A break in the pipe can be detected by the saturated soil around the break. Limits of penetration have not been reached; work is being done to determine empirical standards of system performance on a wide variety of soils. Since better information yields better cost estimates for designing sewage collection systems, the advantages of the radar system are apparent. (WR-SIC Abstract)

AN INVESTIGATION OF PHOSPHORUS REMOVAL MECHANISMS IN ACTIVATED SLUDGE SYSTEMS,
W. E. Morgan, and E. Gus Fruh. Nov 72, 155p EPA-R2-72-031 W73-03512
Paper copy available from GPO $2.00 as EPI.23/2:72-031.

Descriptors: (*Activated sludge process, Phosphorus), (*Phosphorus, *Chemical removal (Sewage treatment)), (*Sewage treatment, Chemical removal (Sewage treatment)), Metabolism, Precipitation (Chemistry), Growth, Nutrients, Calcium phosphates, Aeration, Process variables, Microbiology, Microorganism control (Sewage).

The magnitude of two phosphorus removal mechanisms, metabolic uptake and chemical precipitation with calcium, in activated sludge systems were investigated using synthetic substrates representative of actual wastewaters. Using completely mixed continuous flow laboratory activated sludge units with operating conditions

that precluded significant precipitation of phosphorus, normal growth defined as constant 85 to 90 percent carbon removal was studied. An alkaline phosphatase bioassay verified qualitatively the normal growth phosphorus requirement and storage zone, but did not define the upper limit of the saturation zone. Alkalinity was implicated to exert both a kinetic effect as well as an effect on residual soluble phosphorus in calcium-phosphorus systems. The presence of soluble organics also was shown to be inhibiting with increasing concentrations.

THE ROLE OF SLUDGE WORMS IN EUTROPHICATION,
Ralph O. Brinkhurst. Aug 72, 70p EPA-R3-72-004 W73-03513
Paper copy available from GPO $1.25 as EP1.23:72-004.

Descriptors: (*Limnology, *Worms), (*Nutrients, Limnology), (*Sediments, Limnology), Benthos, Ecology, Feces, Concentration (Composition), Respiration, Growth, Nitrogen, Lake Ontario, Great Lakes.
Identifiers: Cycling nutrients, Eutrophication, Tubifex, Linmodrilus, Peloscolex, Oligochaeta.

Return from the sediment may occur not only by simple chemical exchange, but by the irrigation of sediment by organisms, particularly worms. If sediments are irrigated by worms, the surface may be aerobic but the faeces are derived from the anaerobic layer, so that their deposition on the surface may release nutrients into the water column. To study this, the authors assessed the production of worm tissue in Toronto Harbour and in the trophic gradient of the Bay of Quinte (which strongly resembles the whole Lake Erie system of three basins). The primary aim was to evaluate the recovery of potential nutrients from sediment via the production of sludge worm tissue and the rate of destruction of organic matter in sediment via assimilation by worms (production plus respiration).

WASTEWATER TREATMENT PLANT COST ESTIMATING PROGRAM,
Richard G. Eilers, and Robert Smith. Apr 71, 60p*
Contract EPA-14-12-462

Descriptors: (*Sewage treatment, Cost estimates), Computer programs, FORTRAN, Capitalized costs, Operating costs, Amortization, Design criteria, Activated sludge process, Trickling filtration, Sedimentation.
Identifiers: Sewage treatment plants, IBM 1130 computers.

The report describes a digital computer program for estimating the capital cost, the amortization cost, and the operating and maintenance cost for conventional wastewater treatment plants made up of subsets of current processes. The design relationships used in the program for sizing the individual processes were made as simple as possible. Engineering relationships were used to compute the quantity of sludge produced, the oxygen requirements, etc. This program can be used to estimate the cost of primary sedimentation plants, activated sludge plants, and trickling filter plants. Cost estimates generated by the program for various sizes of plants are shown in the third section of this report. The program is written in FORTRAN and is designed to run on a 16K IBM 1130 computer.

IDENTIFICATION OF POLYCHLORINATED BIPHENYLS IN THE PRESENCE OF DDT-TYPE COMPOUNDS.
Oct 72, 66p EPA-R2-72-004 W73-03515
Contract EPA-68-01-0082
Paper copy available from GPO $1.25 as EP1.23/2:72-004.

Descriptors: (*Chlorine organic compounds, *Emission spectra), (*Spectroscopic analysis, Chlorine organic compounds), (*Pesticides, Spectroscopic analysis), DDT, Biphenyl, Excitation, Fluorescence, Chlorine aromatic compounds, Chlorine aliphatic compounds, Errors, Molecular isomerism, Water analysis, Cryogenics.
Identifiers: *Biphenyl/chloro, DDD pesticide, DDE pesticide, *Water pollution detection.

Polychlorinated biphenyls (PCB's) interfere with gas chromatographic analyses of DDT and related compounds, necessitating a simple indipendent method for PCB determination. The purpose of the present study was to determine the applicability of low temperature (77K) luminescence methods to this problem. Basic studies included documentation of excitation/emission spectra of 6 pesticides (p, p' - and o,p'- DDE, DDD, and DDT), 7 PCB isomers, and 5 PCB mixtures (Aroclors). Although phosphorescence spectra of the DDD and DDT compounds are very similar, possible differences in lifetime and polarization measurements may aid in differentiation. Low temperature luminescence studies in various binary mixtures of Aroclor 1254 and p, p' -DDT indicate Aroclor 1254 may be identified and quantitated in the presence of DDT concentrations 100X greater.

CONTROLLING THERMAL POLLUTION IN SMALL STREAMS,
George W. Brown, and Jon R. Brazier. Oct 72, 68p EPA-R2-72-083 W73-03516
Paper copy available from GPO $1.25 as EP1.23/2:72-083.

Descriptors: (*Water pollution, Heat), (*Lumbering, Water pollution), Solar heating, Forestry, Oregon, Temperature.
Identifiers: *Thermal pollution, *Water pollution control, *Clear cutting.

Buffer strips have been proposed as a method for controlling temperature changes in streams adjacent to clear-cuttings. Nine small mountain streams in Oregon's Coast Range and Cascade Mountains were studied to determine the influence of buffer strips on water temperature. Timber volume in the strip, strip width, and canopy density perpendicular to the sun's rays were compared to the effectiveness of the strip in controlling temperature change. This effectiveness was not well correlated with timber volume or strip width. The density of the canopy in the path of the sun is the most important buffer strip characteristic for water temperature control. A method for measuring the density of the canopy in the path of the sun is described. The use of this method in the design of buffer strips will provide protection for the stream and maximum harvesting of the timber resource. (Author)

INITIAL MIXING IN COAGULATION PROCESSES,
Richard J. Stenquist, and Warren J. Kaufman.
Nov 72, 167p EPA-R2-72-053 W73-03511
Paper copy available from GPO $2.25 as EP1.23/2:72.053.

Descriptors: (*Coagulation, Mixing), (*Sewage treatment, Coagulation), (*Flocculating, Mixing), Performance evaluation, Turbulent flow, Alums, Tubes, Tracer studies, Electrical resistance, Chlorination, Flow rate, Applications of mathematics, Chemical reactors.
Identifiers: Sewage flow rate.

The investigation was undertaken with the objective ofdetermining the importance of the initial mixing step in water and wastewater treatment processes and determining whether increasing the rapidity of the initial mixing could improve process performance. The principal process considered was alum coagulation-flocculation of a kaolin suspension in water. The initial mixing device under consideration was a biplane, square-mesh grid of bars placed in a turbulent flow, tubular reactor; a 2-in. pipe was used in the present studies. Studies were made using a single electrode 'point' conductivity probe and NaCl solution tracer to determine what parameters affect the mixing which occurs in the turbulaent flow field downstream from a grid, and from these results a general mixing model was developed. The relation between initial mixing and process performance was also studied. (Author)

APPLICATION OF EMULSIONS IN TRITIUM COUNTING WITH REFRIGERATED SYSTEMS,
Robert Lieberman, Benjamin P. Prewitt, and Robert Orth. 28 Jan 71, 7p
Prepared in cooperation with Florida State Dept. of Heath and Rehabilitative Services, Orlando.

Descriptors: (*Emulsions, *Scintillation counters), Tritium, Organic solvents, Xylenes, Toluene, Formulations, Water.

The use of emulsifiers in the low-level radioassay of tritiated aqueous samples by liquid scintillation counting at ambient temperature was investigated and a new emulsifier for this purpose, Triton N-101, was introduced earlier. The objective of the investigation reported here was to find an optimum emulsifier system that would incorporate 40 percent water and remain clear at temperatures below 10C.

FIELD DETERMINATION OF DOSE FROM 133XE IN THE PLUME FROM A PRESSURIZED WATER REACTOR,
G. J. Karches, H. E. Kolde, W. I.. Brinck, R. L. Shearin, and C. R. Phillips. 1971, 10p IAEA-SM-148/30
Pub. in Rapid Methods for Measuring Radioactivity in the Environment, p515-523 1971.

Descriptors: (*Radioactive contaminants, Xenon isotopes), (*Gamma counters, Radioactive contaminants), Pressurized water reactors, Air pollution, Dose rate.
Identifiers: FIDLER detectors, Xenon 133.

A commercially available instrument designed for measuring low-energy gamma radiation has been successfully used to monitor the plume from a pressurized water reactor (PWR). The detector consists of a 1/16-in. thick by 5-in. diameter NaI (Tl) crystal optically coupled through a quartz light pipe to a 5-in. multiplier phototube. Pulses from the detector are sorted by use of a single-channel pulse height analyser and read from a linear-log meter. Response of the instrument is compared with a tissue-equivalent ionization chamber to approximate the external dose to persons in or near the plume. The instrument response at a distance of 0.4 mile was six times the background reading. At distances greater than one mile the plume was still easily detectable. The detector system described is applicable for tracking the plume from RWRs, and can also be used for estimating the dose to the population for both decay tank discharges and accidental releases. A RAPID METHOD FOR DETERMINING 85KR IN ENVIRONMENTAL AIR SAMPLES,
S. L. Cummings, R. L. Shearin, and C. R. Porter.
1971, 8p IAEA-SM-148/11
Pub. in Rapid Methods for Measuring Radioactivity in the Environment, p163-169 1971.

Descriptors: (*Air pollution, Krypton 85), (*Gas analysis, *Krypton 85), (*Radioactive contaminants, Air pollution), Gas sampling, Scintillation counters, Concentration composition, Laboratory equipment.
Identifiers: Air pollution detection.

The report describes a rapid method for determining 85Kr in environmental air samples. Equipment and procedure used to separate 85Kr from environmental air samples for liquid scintillation counting are described in detail. The procedure employs charcoal and molecular sieve cold traps, calcium sulphate, ascarite (NaOH preparation) and a titanium furnace (900C) for the removal and separation of other air constituents from krypton. Air samples are spiked with 83Kr (m) to provide a direct determination of the krypton separation yield. One cubic metre of air can be processed in about 4 h with 80 to 90% krypton recovery resulting in a 2-sigma error of the 85Kr concentration of less than 10%. The procedure is well suited to monitoring environmental air samples with respect to nuclear facilities, such as nuclear reactors and fuel reprocessing plants.

STUDY OF THE FEASIBILITY OF MEASURING 85KR THROUGH A NATIONAL SURVEILLANCE SYSTEM,
R. L. Shearin, C. R. Porter, and S. L. Cummings.
1971, 6p IAEA-SM-148/64
Pub. in Rapid Methods for Measuring Radioactivity in the Environment, p649-653 1971.

Descriptors: (*Krypton 85, *Air pollution), (*Nuclear power plants, Radioactive contaminants), (*Radioactive contaminants, Air pollution), United States, Gas sampling, Scintillation counters, Errors.

The report describes the feasibility of determining the rate of increase of 85Kr in environmental air caused by the discharge of the gaseous waste product from nuclear facilities. Compressed air was acquired from commercial suppliers in widely distributed locations throughout the United States. Krypton was separated from the air and counted by liquid scintillation. Comparison was made with previous determinations. Concentration versus time relations are presented to show any increased levels as more nuclear facilities go into operation. The results are analysed to determine if statistically significant differences in levels exist between sampling locations. Variations and concentrations at a given location are also evaluated. Public exposure doses are calculated. Comments are offered relative to the future significance of 85Kr in environmental radiation with projected growth in the nuclear industry. Based on the rbove study, the feasibility of operating a national network is presented, including recommended number of stations, mode of sampling and sampling site selection. (Author)

IN VIVO KINETIC BEHAVIOR OF 85KR IN THE WHOLE GUINEA PIG,
William P. Kirk, and Donald A. Morken. 1972, 22p
Prepared in cooperation with Rochester Univ., N.Y. Presented at the Annual Meeting Health Physics Society, Las Vegas, Nev., 11-15 Jun 72. Paper no. 63.

Descriptors: (*Krypton isotopes, *Radiobiology), In vitro analysis, Physiology, Radiation dosage, Gases, Tissues (Biology), Absorption (Biology), Radiation hazards, Saturation, Body weight, Guinea pigs, Experimental data.
Identifiers: Krypton 85.

Assessment of the total hazard associated with 85Kr exposure must include evaluation of the dose from gas in the body tissues which, in turn, requires detailed knowledge of its in vivo kinetic behavior. Study of kinetic behavior is the evaluation of the capacity of a tissue or aggregate of tissues to hold 85Kr and the rate (s) at which it will reach that capacity during an exposure or, alternately, give up the krypton when the exposure ceases. A common measure of the capacity of the tissue for 85Kr is the partition coefficient which is the ratio of the equilibrium concentration (volumetric) of 85Kr in the tissue to the concentration in the air being breathed. The data reported together with the observations of Tobias et al and Hytten indicate that time required for saturation and desaturation may be directly correlated to weight of the animal.

THE UPTAKE OF CERIUM-144, PROMETHIUM-147, AND PLUTONIUM-238 BY OAT PLANTS FROM SOILS,
S. L. Cummings, and L. Bankert. 14 Jan 71, 3p
Pub. in Radiological Health Data and Reports, v12 p83-85 Feb 71.

Descriptors: (*Radioactive isotopes, Agricultural products), (*Public health, Radioactive isotopes), Farm crops, Oat plants, Soils, Environment, Absorption (Biology), Plants (Botany), Cerium 144, Plutonium 238, Promethium 147, Health physics, Food chains.

The uptakes of cerium-144, promethium-147, and plutonium-238 by oat plants were determined for nine soils, and promethium-147 and plutonium-238 uptakes were compared with cerium-144 uptake. The percentage uptake values for all three radionuclides were very low, ranging from .000,001 to .001 percent. Nitrogen and potassium fertilizers increased the uptake of promethium-147 by oat plants from an Amite soil. Because the amount of cerium-144, promethium-147, and plutonium-238 taken up by plants from soils is very small, the health hazards to man by the soil-plant-man pathway from these radionuclides will probably be negligible at the levels used in this study. LONG-TERM EVALUATION OF THE BIOLOGICAL HALF-LIFE OF TRITIUM,
A. A. Moghissi, M. W. Carter, and Robert Lieberman. 27 Aug 70, 4p
Revision of report dated 16 Jul 70. Pub. in Health Physics, v21 p57-60 Jul 71.

Descriptors: (*Tritium, Half life), (*Radioactive isotopes, Half life), (*Health physics, Tritium), (*Occupational diseases, Tritium), Absorption (Biology), Skin, Painting, Irradiation, Radiation hazards, Seasonal variations, Body fluids.

The body burdens of two tritium luminous dial painters have been followed since the 'all of 1967. Urine collections began 6-10 months after termination of work involving occupational exposure to tritium. In both cases, an intermediate (Ti) and a long (T1) half-life component could be observed. One individual exhibited a Ti of 21 days and a T1 of 280 days, whereas the second worker showed a Ti of 33 days and a T1 of 2020 days. A surprisingly high seasonal dependence of tritium body water concentration was observed in one case. This resulted in an increase of tritium conceatration in body water in winter as compared to the previous summer. (Author)

FULL SCALE PARALLEL ACTIVATED SLUDGE PROCESS EVALUATION,
Erwin D. Toerber. Nov 72, 201p EPA-R2-72-065 W73-03510
Paper copy available from GPO $2.75 as EP1.23/2:72-065.

Descriptors: (*Activated sludge process, Performance evaluation), (*Sewage treatment, Activated sludge process), Mixing, Flow rate, Aeration, Solids, Pilot plants, Cost estimates, Tracer studies, Biochemical oxygen demand, Comparisons.
Identifiers: Sewage flow rate.

A comparison was made between parallel activated sludge systems operating under completely-mixed and plug-flow modes. Initially, a rhodamine dye tracer study was conducted to determine conditions necessary to achieve the two operational modes. The completely-mixed system was operated at 5 constant detention times ranging from 5 hours to 1 hour. The break in treatment efficiency (a marked drop below 90% removal of soluble BOD5) occurred between 1 and 2 hours. No marked difference in treatment efficiency was found between the two modes. A set of shock loads were applied in parallel and separately to each mode. The complete-mix system did show an advantage over plug-flow under shock load conditions at a short detention time (1.5 hours). A 500 gpd completely-mixed pilot plant was successful in duplicating the full scale organic removal efficiency.

CHARACTERISTICS OF RAINFALL RUNOFF FROM A BEEF CATTLE FEEDLOT,
R. Douglas Kreis, Marion R. Scalf, and James F. McNabb. Sep 72, 51p W73-03520, EPA-R2-72-061
Paper copy available from GPO $1.00 as stock no. EP1.23/2:72-061.

Descriptors: (*Water pollution, Agricultural wastes), (*Surface water runoff, *Agricultural wastes), (*Beef cattle, Agricultural wastes), Livestock, Rainfall intensity, Nutrients, Industrial waste treatment, Dissolved organic matter, Biochemical oxygen demand, Concentration (Composition).
Identifiers: *Feedlot wastes, Manure, Chemical oxygen demand, Path of pollutants.

Rainfall runoff from a 12,000-head capacity commercial beef cattle feedlot was characterized and a treatment-disposal system used by the feedlot was evaluated. A four- to ten-inch manure mantle on the feedpen surface was found to prevent runoff from 0.2- to 0.3-inch rainfalls depending on intensity and antecedent moisture conditions. The total runoff from the feedpens was equivalent to 39 percent of the total rainfall during the study period. Direct runoff from the feedpens contained pollutant concentrations in the form of oxygen demand, solids, and nutrients that were generally an order of magnitude greater than concentrations typical of untreated municipal sewage. The treatment disposal system produced no appreciable improvement in the quality of the waste water.

REVIEW OF TRITIUM MONITORING DEVICES,
H. L. Kelley, and C. R. Phillips. Aug 71, 21p

Descriptors: (*Radiation measuring instruments, *Tritium), Reviews, Ionization chambers, Proportional counters, Scintillation counters, Monitors.

The need for adequate monitoring techniques led to the investigation of many possible monitoring systems. The difficulties associated with the detection of very low energy radiations have necessarily complicated basic detection devices, and individual specifications are, therefore, often necessary for each particular monitoring requirement. Practical monitors can be separated essentially into two groups. One group consists of monitors that render constant or immediate indications of activities within the monitored media. The second includes tritium collection systems that use water vapor collection traps for subsequent analysis of tritium. The report discusses these two types of monitors.

BIOLOGICAL TREATMENT OF ACID MINE WATER.
Final rept.,
Franco Rabolini, and Philip A. Rice. Jul 71, 83p
Grant EPA-WP-01460-01

Descriptors: (*Mine waters, *Sulfate reducing bacteria), (*Water pollution, Mine waters), (*Industrial waste treatment, Mine waters), Biodeterioration, Metabolism, Growth, Sludge, Temperature, pH, Digestion (Decomposition), Desulfovibrio.
Identifiers: Sulfur bacteria, *Mine acid drainage, Biological industrial waste treatment, Desulfovibrio desulfuricans.

A strain of Desulfovibrio Desulfuricans was used to test the feasibility of treating acid mine water biologically. Sulfate reduction rates were measured with lactate media at different temperatures, influent pH, and sulfate concentrations in batch and continuous reactors. Among the several additional organic substrates tested, digester sludge appears to be the most attractive because of its low cost and its neutralizing properties. Sulfate reduction in mixtures of acid mine water and digester sludge were demonstrated in a semi-continous reactor and the sulfate reduction rates were measured. The controlling factors of sulfate reduction are discussed.

COST EFFECTIVENESS AND CLEAN WATER. ANNUAL REPORT TO THE CONGRESS.
Final draft.

Jan 71, 140p

Descriptors: (*Water pollution, *Cost analysis), (*Water quality, Cost analysis), Government policies, National government, Trends, Capitalized costs, Economic analysis, Operating costs, Cost effectiveness, Industrial wastes, Assessments, Sewage treatment, State government, Forecasting, Industrial waste treatment, Biochemical oxygen demand.
Identifiers: Sewage treatment plants, *Water pollution economics, Water pollution abatement.

The report coosiders the question of efficiency in Federal actions towards waste water treatment, directing its attention to: The distribution of investments as compared to the distribution of poluting activities and the location of water pollution; The results of municipal and industrial waste treatment investments made over the life of the Federal construction grant program, in terms of

reduction of oxygen demand and nutrients in sewage; Avoidable increase in local operating, maintenance, financing, and overhead costs of waste treatment; and The questionable strategy of making use of investment capital essentially to forestall some future needs, and at the same time permitting the persistence of existing treatment system deficiencies.

DESIGN OF A PARTICULATE AERODYNAMIC TEST FACILITY.
Final rept. 7 Dec 70-7 Oct 71,
Larry W. Anderson, William F. Lapson, and John W. Schaefer. 7 Dec 71, 134p Aerotherm-71-43
APTD-1158
Contract EPA-71-44

Descriptors: (*Air pollution, *Particles), (*Wind tunnels, Air pollution), Laboratories, Design, Test facilities, Dust, Combustion products, Gas sampling, Engineering drawings.

Aerosols emitted from stationary sources constitute one of the most common and readily observable air pollutants currently being subjected to control measures. Further advancement in the particulate control state of the art will require basic information on the general behavior of particulates in flue gases. In addition, more sophisticated and automated instrumentation to test the performance of control equipment or compliance with air pollution regulations is needed. The research described concerns this new instrumentation. The report documents the results of a study to develop a preliminary or conceptual design for a particulate aerodynamic test facility. Basic features of other aerodynamic test facilities are reviewed, and features which are needed in the present design are identified. Engineering tradeoffs and technical considerations are presented. A detailed description of the final facility design is presented along with the controls and instrumentation.

Identifiers: *Solid waste disposal, *Sanitary landfills, Dissolved solids, Path of pollutants.

The study attacks one of the problems inherent in disposing of refuse on land: the ever-present danger that-unless properly engineered in a sanitary landfill--the wastes will adversely effect ground-water resources. Hydrogeologic and water quality studies of five landfills in northeastern Illinois were carried out. The distribution and concentration of dissolved solids in the vicinity of four of these landfills was found to be controlled by the configuration of the ground-water flow system. The major factors influencing the attenuation of the dissolved solids appear to be the particle size of the earth materials through which they move and the distance that they move.

International Standard Book no. 5502-0026.
Paper copy available from GPO $0.30 as EP3.2:AC2/2.

Descriptors: (*Waste disposal, *Accounting), Collection, Hauling, Cost analysis, Operating costs, Financing, Forms (Paper), Maintenance.
Identifiers: Waste transfer stations, *Solid waste disposal.

The increasing costs and complexities of solid waste handling require new, more sophisticated management techniques. Data on performance and the costs of operation and ownership are essential for the use of these management tools. A good information system is, therefore, a prerequisite to effective management. The proposed system provides a guide to the type and quantity of information to be gathered, its classification, and the method of collection. It is intended to be of use to municipal or private personnel involved in transfer station operation and ownership.

Identifiers: *Plastic recycling, *Waste recycling, *Solid waste disposal.

The objectives of the research were as follows: To identify waste plastic/coreactant reaction products with potential commercial value; To identify waste plastic/air combustion products that are potential air pollutants; and To conceive of and provide technical and economic evaluations for chemical processes using waste plastics as raw materials. The report presents the approaches, methods, and results of these various phases of the technical-economic analyses performed on waste plastic utilization systems. The general approach and analytical tools employed are presented. The determination of the equilibrium species distributions and reaction path analyses are given. The kinetic analyses and preliminary design and economic analyses are also discussed. The conclusions and recommendations include not only the proposed selection of processes for further application, but also other implications, for air pollution.

FEASIBILITY STUDY OF THE DISPOSAL OF POLYETHYLENE PLASTIC WASTE,
Kurt Gutfreund. 1971, 53p EPA-SW-14c,
PHS-Pub-2110
Contract PH-86-67-274
International Standard Book No. 5502-0036.
Paper copy available from GPO $0.55 as EP3.2:P76.

Descriptors: (*Waste disposal, *Polyethylene), (*Decomposition reactions, *Olefin resins), Packaging materials, Biodeterioration, Oxidation, Nitric acid, Differential thermal analysis, Infrared spectroscopy, Ultraviolet radiation, Calorimetry, Mechanical properties, Heat of combustion, Ultrasonic radiation, Ozonization, Incinerators.
Identifiers: *Solid waste disposal.

Synthetic plastics as polyethylene do not decompose when disposed of in landfills and can cause air pollution problems if burned. An efficient, safe, and economical method for the disposal of wastes as polyethylene is needed. A feasibility study directed toward these objectives and designed to determine the applicability of selected approaches to the problem of polyethylene disposal has been conducted. Particular attention was given to chemical methods of modifying the polyolefin and the effects of the treatments on the mechanical, thermal, and biological properties of the polymer. One of the methods discussed that has appeared particularly attractive involves the oxidative degradation and concomitant nitration of polyethylene by exposure to red fuming nitric acid, or binary systems including HNO3, as a constituent.

INCENTIVES FOR RECYCLING AND REUSE OF PLASTICS.
Final rept.,
Jack Milgrom. 1972, 316p* EPA-SW-41c-72
Contract PHS-CPE-R-70-0048

Descriptors: (*Plastics, *Waste disposal), (*Materials recovery, Plastics), Utilization, Plastics industry, Resources, Circulation, Reclamation, Plastics processing, Scrap, Economic analysis, Strategy, Legislation, Government policies, Taxes, Cost analysis, Supply (Economics), Containers.
Identifiers: *Plastic recycling, *Waste recycling, *Solid waste disposal, Decondary materials industry, Polymer additives.

There were two aspects to this study: To develop a descriptive model of the plastics cycle; and, To develop complete strategies for promoting the recycling and reuse of plastics. The study is reported in five parts. Part I contains a discussion of the technology of plastics, which provides the basis for understanding the technical problems of recycling. Part II describes the economics of the plastics industry needed to develop and assess the strategies for recycling plastics and discusses the market for both virgin and secondary materials. Part III describes in detail the entire plastics cycle as they are manufactured, starting from petrochemicals until they become a plastic end product in the hands of the consumer. Part IV provides an analysis of the existing state of the art of methods for isolating plastics from the solid waste stream and of applications for the scrap material. In Part V the strategies for promoting the recycling and reuse of plastics are developed and described in detail.

DEVELOPMENT OF THE AQUEOUS PROCESSES FOR REMOVING NO (X) FROM FLUE GASES,
Gilford A. Chappell. Sep 72, 112p* EPA-R2-72-051
Contract EPA-68-02-0220

Descriptors: (*Nitrogen oxides, *Adsorption), (*Air pollution, Nitrogen oxides), Adsorbents, Chemisorption, Scrubbers, Sodium sulfites, Limestone, Hydroxides, Flue gases, Mixtures, Sulfur dioxide, Carbonates.
Identifiers: *Alkaline scrubbing, Wet methods, *Air pollution control.

A screening study was conducted to evaluate the capability of aqueous solutions to scrub NO (x) from the flue gases emitted by stationary power plants fired with fossil fuels. The key findings discussed include: The addition of NO2 to flue gas to improve NO (x) (mostly NO) absorption does not appear promising; Sulfite solutions and slurries are efficient NO2-SO2 absorbents; Calcium magnesium, and zinc hydroxide slurries are effective NO2-SO2 absorbers; Limestone (CaCO3) is also a good NO-SO2 absorbent for the same reasons as for Ca (OH)2; NO2 scrubbing is enhanced by removing oxygen from the flue gas or by adding an anti-oxidant such as hydroquinone to the scrubbing solution; Sulfide solutions are excellent NO2 and SO2 absorbers but do generate a small amount of NO; and Part of the absorbed SO2 is oxidized to sulfate. Combined NO (x)-SO (x) scrubbing seems feasible using any of several hydroxide or carbonate systems provided NO (x) (NO) can be efficiently oxidized to NO2 upstream from the scrubbing unit. (Author)

JOINT USPHA-TVA COMPOSTING PROJECT, JOHNSON CITY, TENNESSEE.
Interim rept. Jun 67-Sep 69.

1972, 223P EPA-SW-31r.1

Descriptors: (*Waste disposal, *Composts), Waste treatment, Performance evaluation, Industrial plants, Cost estimates, Sludge disposal, Agricultural wastes, Microorganisms, Operating costs, Construction costs, Grinding (Comminution), Public health, Capitalized costs, Chemical analysis.
Identifiers: *Solid waste disposal, Paunch.

The report discusses research to provide more comprehensive knowledge about windrow composting as a solid waste management tool and permit better assessment of available information about this subject. Results of investigations and operational experiences obtained from the project during the period June 1967 to September 1969, are discussed. The project was located at Johnson City, Tennessee. During the period, an average of 34 tons of raw refuse per day was processed. Investigations of the potential hazard to health from pathogenic organisms in compost were conducted. Sewage sludge, cow manure, paunch manure, aged poultry manure, animal blood, and pepper canning wastes in varying amounts were all successfully composted. Because production of an acceptable grade of compost was delayed, insufficient data was available to assess the agricultural value of the compost produced.

Descriptors: (*Souris River, *Water quality), (*Water pollution, Souris River), (*North Dakota, Water pollution), International relations, Canada, Industrial wastes, Sources, Sewage, Agricultural wastes, Surface water runoff, Assessments,

Water analysis, Inventories, Aquatic microbiology, Nutrients, Dissolved gases, Biochemical oxygen demand, Indicator species.

The Souris River is an international stream which originates in the Province of Saskatchewan, Canada. The river flows southward from Canada into North Dakota and then, after making a large horseshoe bend, flows northward into the Canadian Province of Manitoba. Water uses in the United States affect both the quality and quantity of water released to Canada. Since the Basin's water supply is not adequate to meet the needs of all potential water uses, conflicts exist over priority of water use. Large variations in annual runoff compound these water use conflicts. Waste sources include untreated and inadequately treated municipal and industrial wastes, agricultural wastes, urban runoff, rural runoff, and several large wildlife refuges. The primary objectives of the report are to: Assess the impact of municipal and industrial waste discharges on water quality; Define water quality conditions in the wildlife refuge areas; and Provide background data on inorganic constituents in the river system as a basis for evaluating the water quality effects of the Garrison Diversion Irrigation Project.

PHOTOCHEMICAL METHODS FOR PURIFYING WATER,
C. Y. Cha, and J. M. Smith. Nov 72, 38p EPA-R2-72-104 W73-03505
Prepared in cooperation with California Univ., Davis. Dept. of Chemical Engineering.
Also available from GPO $0.70 as EP1.23/2:72-104.

Descriptors: (*Sewage treatment, *Photochemical reactions), Oxidation, Chemical reactors, Ultraviolet radiation, Reaction kinetics, Chlorination, Design criteria, Performance evaluation, Operating costs, Cost estimates, Ultraviolet lamps, Mercury lamps, Process charting Capitalized costs.
Identifiers: Tertiary sewage treatment.

The kinetics of photochemical oxidation of organic carbon pollutants, with and without sensitization by chlorine, have been determined. The results, which are suitable for use in designing reactors for any type of lamp and lamp-reactor geometry, are based upon data obtained for secondary effluents from Sacramento area municipal treatment plants. A trough reactor with parabolic reflector was the most suitable design for a large-scale, tertiary treatment plant based upon photochemical oxidation. Cost calculations were made for reducing the TOC from 10 to 4 mg/liter and maintaining a chlorine concentration of about 0.8 mg/liter. For a capacity of one-million gallons per day of secondary effluent, treatment costs are given. (Author)

INDOOR-OUTDOOR AIR POLLUTION RELATIONSHIP: A LITERATURE REVIEW,
Ferris B. Benson, John J. Henderson, and D. E. Caldwell. Aug 72, 83p* AP-112
Also available from GPO $1.25 as EP4.9:112.

Descriptors: (*Air pollution, *Buildings), Reviews, Fungi, Pollen, Bacteria, Ventillation, Air conditioning, Residential buildings, Spores, Carbon dioxide, Sulfur dioxide, Carbon monoxide, Particles, Filtration, Diurnal variations, Seasonal variations, Concentration (Composition).
Identifiers: *Indoor air pollution.

While extensive measurements have been and are being made of outdoor pollution, very few data have been gathered on indoor pollution. The data that are available are compiled and analyzed in the report. Based on a review of the literature, it was possible to infer relationships between indoor and outdoor pollution and to identify factors that affect these relationships. The relationships identified must be considered tentative. Except for bacteria and perhaps, for fungus spores, indoor pollution levels appear to be controlled primarily by outdoor concentrations. Other factors that in-

fluence indoor pollution levels include internal activities and pollutant generation, atmospheric conditions and natural ventilation, time, location, type of building, and air conditioning and filtration systems. Indoor concentrations of pollen and reactive gases, expressed as a percentage of outdoor concentrations, decrease with increasing outdoor concentrations. Bacterial concentrations indoors appear to be more closely related to the presence and activities of people inside than to outdoor concentrations.

Rex Chainbelt, Inc., Milwaukee, Wis.
A FREE FLOATING ENDLESS BELT OIL SKIMMER,
Robert W. Agnew. Aug 72, 99p* EPA-R2-72-006 W73-03504
Contract DI-14-12-908
Also available from GPO $1.50 as EP1.23/2:72-006.

Descriptors: (*Water pollution, Oils), (*Skimmers, *Oils), (*Absorbers (Equipment), Oils), Design, Performance evaluation, Materials recovery, Belt conveyors, Polyurethane resins, Catamarans, Boats, Bunker oils, Fuel oil, Crude oil, Computer programs, Polypropylene.
Identifiers: *Oil pollution removal, Oil pollution control, Oil spills, PETSKI computer program.

A free floating endless belt oil skimmer was developed as a means of recovering spilled oil from surface waters. The skimmer uses a unique high efficiency conveyor wringer to power and wring the belt. The belt is designed to float on the water surface and responds rapidly to the shape of the waves, thereby maximizing oil-sorbent contact time. Evaluation of the skimmer was conducted in a 60 foot diameter annular test tank under the conditions of slightly progressive waves having an amplitude of two feet. One foot wide neoprene backed polyurethane foams were utilized as the sorbent material. The experimental results indicate that the oil pickup rates will vary with the belt speed, oil slick thickness and belt porosities. The recovered liquid contained approximately 50-70% oil at 0.10 inch slick thickness. A conceptual design of a five foot wide boat mounted skimmer capable of harvesting approximately 5 acres per hour of spilled oil is presented.

SELECTED IRRIGATION RETURN FLOW QUALITY ABSTRACTS 1968-1969.
Annual rept. no. 1,
Gaylord V. Skogerboe, Venus T. Sahni, and Wynn R. Walker. Oct 72, 193p* EPA-R2-72-094 W73-03508
Prepared in cooperation with Colorado State Univ., Fort Collins. Agricultural Engineering Dept.

Descriptors: (*Irrigation, *Ground water recharge), (*Bibliographies, Irrigation), (*Water pollution, *Ground water), Water quality, Nutrients, Salinity, Water conservation, Aquifers, Soil chemistry, Fertilizing, Hydrology, Nitrogen, Phosphorus, Saline soils, Soil water, Subsurface drainage, Surface water runoff, Legislation, Water resources, Erosion control, Plant growth, Farm crops.
Identifiers: Return flow, Denitrification, Path of pollutants.

Research related to the quality of irrigation return flow is being conducted at numerous institutions throughout the western United States. Related work is also underway at other institutions in the United States, as well as other portions of the world. Approximately 100 sources of material have been searched for over 400 articles pertinent to the National Irrigation Return Flow Research and Development Program. These articles describe water quality problems resulting from irrigated agriculture, potential technological solutions for controlling return flows, recent research pertinent to return flow investigations, and literature associated with institutional constraints in irrigation return flow quality control.

STORAGE AND TREATMENT OF COMBINED SEWER OVERFLOWS,
Clarence C. Oster. Oct 72, 125p* EPA-R2-72-070 W73-03514
Prepared in cooperation with Banister, Short, Elliott, Hendrickson and Associates, St. Paul, Minn.
Also available from GPO $2.00 as EP1.23/2:72-070.

Descriptors: (*Combined sewers, *Water storage), (*Reservoirs, Combined sewers), (*Overflows, Combined sewers), Surface water runoff, Feasibility, Flow control, Sewage treatment, Cost estimates, Operating costs, Capitalized costs, Performance evaluation, Rainfall intensity.
Identifiers: Sewage flow rate, Chippewa Falls (Wisconsin).

The objective of this study was to demonstrate the feasibility and economic effectiveness of a combined wastewater overflow detention basin. A paved asphalt detention basin with a storage volume of 8.66 acre feet was constructed at Chippewa Falls, Wisconsin to receive overflow from a 90 acre combined sewer area including all of the central business district. The system was designed so that the stored combined sewage could be pumped to the wastewater treatment plant when precipitation subsided. There were no observed detrimental effects on treatment plant operation due to the increased intermittent flows from the detention pond. The estimated cost of operating and maintaining the pond and associated facilities are given. Capital costs are also discussed.

Prepared in cooperation with the JBF Scientific Corp., Wakefield, Mass.

Descriptors: (*Water pollution, Mercury), (*Sediments, Mercury), (*Dredging, Water pollution), (*Mercury, *Chemisorption), Water chemistry, Clay soils, Adsorption, Mercury organic compounds, Thiols, Complex compounds, Inorganic sulfides, Proteins, Waste disposal, Spoil, Earth fills, Dissolved gases, Oxygen, Additives.
Identifiers: *Water pollution control, Partition coefficients, Mercury/methyl, Solid waste disposal.

Methods for controlling the release of mercury from sediments have been developed, and the effects of dredging on the redistribution of mercury have been evaluated. Laboratory studies consisted of both partitioning and aquarium experiments using artificially contaminated sediments as well as sediments from the polluted fieldogressive waves having an amplitude of two feet. One foot wide neoprene backed polyurethane foams were utilized as the sorbent material. The experimental results indicate that the oil pickup rates will vary with the belt speed, oil slick thickness and belt porosities. The recovered liquid contained approximately 50-70% oil at 0.10 inch slick thickness. A conceptual design of a five foot wide boat mounted skimmer capable of harvesting approximately 5 acres per hour of spilled oil is presented.

EVALUATION OF CANAL LINING FOR SALINITY CONTROL IN GRAND VALLEY.
Environmental protection technology series,
Gaylord V. Skogerboe, and Wynn R. Walker. Oct 72, 214p W73-03518, EPA-R2-72-047
Contract DI-14-01-201
Paper copy available from GPO $2.75 as EP1.23/2:72-047.

Descriptors: (*Canal linings, *Irrigation canals), (*Colorado River, *Salinity), (*Water pollution, Salinity), Seepage, Subsurface drainage, Irrigation, Concrete structures, Saline soils, Colorado, Hydrology, Ground waters.
Identifiers: Return flow.

The report discusses a project to evaluate the salinity control effectiveness of canal and lateral linings for reduction of seepage losses into the ground water. Grand Valley in the upper Colorado River Basin was used as a model. A detailed evaluation of the necessary hydrologic and salinity parameters in the principal demonstration area was made. A hydro-salinity model has been prepared, which has allowed the itemizing of the various segments of the dual flow system into water and salt budgets for the periods prior to and immediately after the construction of the linings. In addition, the results were employed to derive some generalized valley-wide water and salt budgets. The salinity control benefits exceeded the costs of the canal lining program. (Author)

DEVELOPING A LOCAL AND REGIONAL SOLID WASTE MANAGEMENT PLAN,
Richard O. Toftner. 1972, 100p*

Descriptors: (*Waste disposal, Management planning), Regional planning, Urban planning, Land use, Economics, Hauling, Organizing, Financing.
Identifiers: *Solid waste disposal.

The report describes the basic features of a general planning process and their use in the development of a local or regional plan for solid waste management. The purpose of the publication was to aid local and regional agencies in preparing comprehensive solid waste management plans. The publication's specific applicability to any one unique situation is not necessarily assured; the publication is intended to be flexible enough, however, to serve every agency in accordance with its own needs and special conditions.

AIR CLASSIFICATION OF SOLID WASTES. PERFORMANCE OF EXPERIMENTAL UNITS AND POTENTIAL APPLICATIONS FOR SOLID WASTE RECLAMATION,
R. A. Boettcher. 1972, 75p* EPA-SW-30c
Contract PH-86-68-157
Paper copy available from GPO $0.75 as EP1.17:30C.

Descriptors: (*Waste disposal, *Classifiers), (*Materials recovery, Waste disposal), Classifying, Feasibility, Waste papers, Metal scrap, Automobiles, Composts, Glass, Performance evaluation, Shredding, Pilot tests.
Identifiers: *Solid waste disposal, Air classifying, Junk car disposal.

The objective of the research reported was to determine the technical feasibility of using air classification to process or treat selected types of nonhomogeneous, dry solid wastes. Design requirements for processing solid wastes with a full-scale commercial unit are estimated and the required supplemental equipment (shredders, screens, dryers) are identified. Limitations and advantages of the method are listed. The air classification method was shown to be applicable to salvage of paper, recovery of nonferrous metal from shredded automobile body waste, and processing of compost. This method was shown to be technically feasible for processing wastepaper. It was also concluded that air classification is technically feasible for processing semifibrous solid waste materials such as compost. Compost can be cleaned of glass and other contaminants that reduce its marketability.

1971 SURVEY AND ASSESSMENT OF AIR POLLUTION DAMAGE TO VEGETATION IN NEW JERSEY.
Alberto Feliciano. Oct 72, 52p EPA-R2-72-010
Contract EPA-68-02-0078

Descriptors: (*Air pollution, *Agricultural economics), (*New Jersey, Agricultural economics), Cost estimates, Damage, Losses, Plant diseases, Vegetable crops, Fruit crops, Oxidizers, Ozone, Peroxy esters.
Identifiers: *Air pollution effects (Plants), Peroxyacetyl nitrate.

A survey of injury resulting from air pollution episodes and assessment of their resultant effect on crop production in 1971 was conducted in New Jersey. Economic loss to crops due to air pollution was estimated at $1,183,800. The survey did not include: indirect losses such as growers' relocation cost, crop substitution losses, nor economic losses to forest trees and ornamental plants and reduction in crop yield due to invisible injury. Three hundred fifteen reported air pollution incidences were investigated and documented during the period of this survey. As a group, vegetables accounted for 51 percent ($598,099) of the total crop loss. The photochemical pollutants were responsible for 80 percent of the plant injury recorded, with ozone contributing about 60 percent and PAN 20 percent of the total. Other pollutants involved were HCl mist, chlorine gas, ethylene, fluoride, sulfur dioxide, ammonia, particulates, oil, and petroleum. (Author)

Contract EPA-68-02-0084
Report on Socioeconomic Environmental Studies.

Descriptors: (*Agricultural economics, *Air pollution), (*New England, Air pollution), Plants (Botany), Damage, Losses, Cost estimates, Agricultural products, Vegetable crops, Ornamental plants, Fruit plants, Sulfur dioxide, Oxidizers, Ethylene.
Identifiers: *Air pollution effects (Plants), Air pollution economics.

A regional survey of New England was initiated to determine the economic losses to the agricultural industry from injury caused by air pollutants. Eighty-three investigations were made in 40 countries of the six New England states. Direct air pollution injury was observed in 14 countries and accounted for 29 of the reports. Greatest economic losses were observed on vegetables and agronomic crops as well as on flowers and foliage plants. Direct economic losses were estimated to be approximately $1.1 million for the 1971-72 season. As some incidents were not reported during the survey, continuing annual losses are estimated to be approximately $1.5 million. (Author)

LOW-SULFUR CHAR AS A CO-PRODUCT IN COAL GASIFICATION,
G. P. Curran, W. E. Clark, Melvyn Pell, and Everett Gorin. Oct 72, 70p EPA-R2-72-060
Contract EPA-EHSD-71-15

Descriptors: (*Charcoal, *Desulfurization), (*Bituminous coal, Gasification), Manufactured gas, Feasibility, Coal, Sulfur compounds, Acceptor materials, Calcium carbonates, Air pollution, Economic analysis.
Identifiers: *Low sulfur fuels, Char.

A feasibility study is presented for the case where low-sulfur char is produced as a co-product with low-sulfur producer gas in a gasification-desulfurization operation with bituminous coal. Calcium carbonate is used as a sulfur acceptor. Experimental data are also presented to support the design feasibility study. These data show that preoxidized coals are extremely responsive to desulfurization under the conditions used in the feasibility study. It is possible by this method to produce low-sulfur chars containing 0.5% or less sulfur content. The economic evaluation shows that it is possible to produce low-sulfur char at a lower Btu cost than would be the case for complete gasification to low-sulfur producer gas. The value of the char, however, as a boiler fuel is less than that of the producer gas itself. It is, therefore, concluded that there is no clear incentive to produce low-sulfur char as a co-product in a gasification-desulfurization operation. (Author)

GENERATION OF STEAM FROM SOLID WASTES.
Final rept.

1972, 139P* EPA-SW-49d-72
Contract PHS-EC-00195
Prepared in cooperation with Lynn, Mass.

Descriptors: (*Waste disposal, *Heat recovery), (*Waste heat boilers, Waste disposal), (*Combustion, *Refuse disposal), Cost estimates, Site surveys, Personnel selection, Shredding, Design criteria, Plant layout, Massachusetts, Feasibility.
Identifiers: *Solid waste disposal, Waterwall incinerators, Lynn (Massachusetts).

The economic feasibility of a refuse-fired waterwall incinerator that would supply steam to an industrial firm is investigated for a community looking for an acceptable solid waste disposal method. The city of Lynn, Massachusetts was used as an example. Several different combinations of grate type, equipment ownership, and equipment location are cost-compared in detail. Plant equipment components and manpower requirements are described. Other solid waste disposal alternatives are discussed. It was concluded that for Lynn, a waterwall incinerator facility is the region's most feasible future solid waste disposal method.

GUIDELINES FOR TECHNICAL SERVICES OF A STATE AIR POLLUTION CONTROL AGENCY,
George A. Jutze. Nov 72, 296p* APTD-1347
Contract EPA-68-02-0211

Descriptors: (*Air pollution, *State government), (*Law enforcement, Air pollution), Handbooks, Organization theory, Chemical analysis, Monitors, Law (Jurisprudence), Data acquisition, Management planning, Regulations, Gas sampling, Services, Litigation.
Identifiers: Government agencies, Implementation Air Pollution Planning Program, *Air pollution control agencies.

A report is prepared for the purpose of presenting guideline information which will assist the user in detailing the needs and requirements of a statewide air pollution control technical services system stressing laboratory operations. A number of appropriate State, regional and local agencies were visited. Their individual situations and operational programs were compiled into 'case histories' which formed the data base utilized in this effort. These data were then analyzed and the subsequent evaluations used to assist in documenting a significant number of elements or factors which will, in a given situation, influence the organization of a statewide laboratory system. This document provides guidelines for operating in the areas of organization, management, program element definition, legal considerations, technical functions, and quality control. (Author)

Descriptors: (*Radiometers, Data processing), (*Atmospheric sounding, Temperature measurement), Remote sensing, Temperature inversions, Air pollution, Statistical analysis, Antenna radiation patterns, Computerized simulation.
Identifiers: *Atmospheric temperature, Radiometric thermasondes.

A study was conducted in which three data processing techniques developed under the previous contract were refined and tested on a small sample of simulated and observed radiometric data. The results were compared and the input data and computer and manpower requirements for operational use of each technique were assessed. The report is organized as follows: Section 2 is devoted to the simulation discrepancy. Participation in the various field experiments is described, and the significant results leading to establishment of the discrepancy are presented. The present state of the art for the simulating the observed antenna temperatures and the impact of this capability upon system performance is discussed. Section 3 describes the data processing techniques. Specific work preformed in developing each technique is discussed, results are presented, and hardware and software requirements to implement each technique are indicated. Section 4 discusses the effects of a non-ideal antenna pattern, with a detailed description of a method of formulating the analysis of these effects. Section 5 contains the conclusions derived from this work and their implications. (Author)

Descriptors: (*Test facilities, Combustion), (*Combustion, *Residual oils), (*Air pollution, Combustion products), Emulsions, Water, Atomizing, Fuel oil, Oil burners, Design, Nitrogen oxides, Tests, Furnaces.
Identifiers: Air pollution control, Smoke number.

The report describes the design and development of a versatile combustion-test rig for investigating combustion of residual fuel oils at conditions simulating either the residence time or turbulence level of combustion in industrial boilers. The rig was designed to permit adjustment of the following factors: excess air, firing rate, combustion-air swirl, atomization-nozzle type, atomization temperature, fuel, and wall temperatures (with cooling surface added). Successful operation of the rig was achieved at firing rates of about 1.8 and 7.0 gph with No. 6 residual fuel oil and a 20 percent water-in-residual fuel oil emulsion. Smoke numbers (Bacharach) are reported for a number of combustion trials at 2 to 30 percent excess air. Preliminary measurements are given for NO (x) concentrations.

SUMMARY OF RECENT TECHNICAL INFORMATION CONCERNING THERMAL DISCHARGES IN TO LAKE MICHIGAN.
Contract rept.

Aug 72, 142p* EPA/V-CR72-1

Descriptors: (*Lake Michigan, *Water pollution), (*Electric power plants, Water pollution), Heat, Temperature gradients, Fresh water biology, Ecology, Industrial wastes, Fresh water fishes, Plankton, Benthos, Plumes, Hydraulic models, Thermal power plants, Cooling water, Nuclear power plants.
Identifiers: *Thermal pollution, Periphyton, Water pollution effects (Plants), Water pollution effects (Animals).

The report is a review of new technical information, relevant to the environmental effects of thermal discharges into Lake Michigan, which is not reflected in the existing record of the Lake Michigan Enforcement Conference. Most of these discharges are from electric power plants. The report discusses separately the physical and biological aspects of thermal discharges. It includes descriptions of preoperational field studies, thermal-bar measurements, field measurements of the physical and biological characteristics of thermal discharges, mathematical modeling techniques, laboratory tests on biological effects of heated water, intake and outfall designs, power plant operational data, analyses of environmental effects and cost estimates of closed-cycle cooling systems, and chemical discharges from both fossil and nuclear power plants. The authors specifically refrained from drawing conclusions from the material. (Author)

Identifiers: *Water pollution detection, *Oil pollution detection, Oil spills.

Acquisition and interpretation of multispectral aerial photography and thermal infrared imagery was performed to evaluate remote sensing applications to oil and other hazardous materials spill prevention surveillance. The San Francisco Bay area was used as a test site, with major sub-areas delineated which contained facilities and activities which might lead to spills of oil and other hazardous substances into waterways. Results demonstrated that high quality, small scale (1/40,000 to 1/60,000) color infrared photography can be used for regional surveillance leading to classification of land use into areas where potential spill sources exist. High quality, large scale (1/5,000 to 1/10,000) color aerial photography can be used for localized delineation of potential spill sources. Recommendations are given for an operational spill surveillance system using multi-scale aerial photography obtained on a 9-inch format. Use of thermal infrared imagery is not indicated at this time.

STORM SEWER DESIGN. AN EVALUATION OF THE RRL METHOD.
Environmental protection technology series,
John B. Stall, and Michael L. Terstriep. Oct 72, 78p EPA-R2-72-068
Paper copy available from GPO $1.25 as EP1.23/2:72-068.

Descriptors: (*Storm severs, Design), Drainage, Urban areas, Watersheds, Surface water runoff, Rainfall, Computation, Flow control.
Identifiers: Rainfall runoff relationships.

Storm rainfall and runoff data were assembled from 10 urban basins in the U.S.A. ranging in size from 14 acres to 8 sq mi. The British RRL method of storm drainage design was applied to the 10 basins. The RRL method considers the urban basin to be comprised of the paved area of the basin which is directly connected to the artificial storm drainage system. In 3 of the 10 basins the RRL procedure was deemed to be appropriate and suitable for the design of a storm drainage system within the normal range of frequency of design rainfall events, from 2 to 20-year events. For greater storms and for certain cases within this frequency range, the RRL method breaks down because the runoff coming from the grassed area of the basin is significant. (Author)

REMOTE SENSING STUDY OF THERMAL DISCHARGES TO LAKE MICHIGAN. ILLINOIS-INDIANA-MICHIGAN.

Oct 72, 49p
See also PB-214 503.

Descriptors: (*Water pollution, Heat), (*Lake Michigan, Water pollution), (*Electric power plants, Water pollution), Michigan, Illinois, Indiana, Law enforcement, Aerial photography, Infrared scanners, Remote sensing.
Identifiers: *Thermal pollution, Water pollution detection.

An aerial reconnaissance study was conducted along the shoreline of Lake Michigan from South Haven, Michigan in a clockwise manner through Waukegan, Illinois. The flights were carried out during the afternoon hours on 17 October 1972 and 19 October 1972. The purpose was to document thermal discharges from electric power plants and to see if they were complying with the Lake Michigan Enforcement Conference. It was concluded that the recommendations were not being fulfilled by many sources of thermal and industrial discharges.

WATER POLLUTION ASPECTS OF STREET SURFACE CONTAMINANTS.
Environmental protection technology series,
James D. Sartor, and Gail B. Boyd. Nov 72, 242p* EPA-R2-72-08
Contract DI-14-12-921
Paper copy available from GPO $3.00 as EP1.23/2:72-081.

Descriptors: (*Urban areas, Surface water runoff), (*Water pollution, *Surface water runoff), (*Streets, Surface water runoff), Refuse, Sources, Urban planning, Cleaning, Land use, Water analysis, Biochemical oxygen demand, Particles, Metals, Inventories, Pesticides.
Identifiers: *Storm water runoff.

Materials which commonly reside on street surfaces have been found to contribute substantially to urban pollution when washed into receiving waters by storm runoff. Calculations based on a hypothetical but typical U.S. city indicated that the runoff from the first hour of a moderate-to-heavy storm would contribute considerably more pollutional load than would the same city's sanitary sewage during the same period of time. The study provides a basis for evaluating the significance of this source of water pollution and provides information for communities having a broad range of sizes, geographical locales, and public works practices. Information was developed for major land-use areas within the cities. The analysis of the runoff is also reported.

A PRESSURE SEWER SYSTEM DEMONSTRATION.
Environmental protection technology series,
Italo G. Carcich, Leo J. Hetling, and R. Paul Farrell. Nov 72, 225p* EPA-R2-72-091

Paper copy available from GPO $2.75 as stock no. EP1.23/2:72-091.

Descriptors: (*Sewers, Pumps), (*Pumps, *Sewage), Performance evaluation, Sanitary engineering, Hydraulic engineering, Flow rate, Greases, Pumping, Grinding (Comminution), Residential buildings.
Identifiers: Pressure sewers, Grinder pumps.

An extensive accumulation of data on pressure sewers and the Grinder Pump (GP) Unit has been presented and summarized. The grinder pump is simply a pump which grinds household sewage and pumps it into the sewer. It has special application to hilly areas where conventional gravity sewers are difficult to install. The report discusses the results of a field demonstration of grinder pump units in Albany, New York. Pressures, water usage, operating time, overflow occurrences, total number of operations, simultaneous operations were recorded. The effectiveness of small, nonmetallic pipes transporting the macerated wastewater under pressure was also successfully demonstrated. Grease accumulation did occur. Extensive chemical sampling proved that the pressure sewer waste was 100% stronger but contained 50% less contaminants on a gm/capita/day basis.

RESTORATION OF BEACHES CONTAMINATED BY OIL,
Garth D. Gumtz. Sep 72, 129p* EPA-R2-72-045
Contract EPA-14-12-809
Paper copy available from GPO $3.50 as stock no. EP1.23/2:72-045.

Descriptors: (*Beaches, *Cleaning), (*Water pollution, Oils), Mobile equipment, Design, Sands, Feeding (Supplying), Separators, Process variables, Flotation, Performance evaluation, Cost estimates.
Identifiers: *Oil pollution removal, *Froth flotation, Oil water separators.

Based on laboratory studies, a 30 ton per hour pilot plant was built for cleaning oil contaminated beach sands. The plant utilized the principle of froth flotation. Extensive field testing considered different oils, feed concentrations, both brackish and sea water, and a range of processing conditions. These varied from nominal runs with sand feed rates of 30 tons per hour and oil concentrations of 0.5% to oil/water separations at high capacity. Using the test results, a mobile unit was designed, constructed, and field tested. Data was obtained on the effects on cleaning efficiency of relevant process parameters. The mobile unit operated successfully under a wide range of conditions. These tests and design are presented.

INTERGOVERNMENTAL APPROACHES TO SOLID WASTE MANAGEMENT,
Richard O. Toftner, and Robert M. Clark. 1971, 22p EPA-SW-47ts
Paper copy available from GPO $0.30 as EP3.2:1N8.

Descriptors: (*Waste disposal, *Regional planning), Organizing, Urban planning, Local government, State government.
Identifiers: *Solid waste disposal, Intergovernmental relations.

Since passage of the original Solid Waste Disposal Act (Public Law 89-272, Title II) in October 1965, there has been considerable discussion about what organizational form a solid waste management system should take. The purpose of the following paper was to examine the basic organizational requirements of solid waste management systems and then relate them to the intergovernmental coordination mechanisms that are available for fulfilling such requirements within regional configurations. The primary objective was to outline an 'integrated management system' that includes planning, organization, operations, and control on a rational regional basis.

ACID MINE DRAINAGE TREATMENT BY ION EXCHANGE.
Environmental protection technology series,
J. G. Holmes, and E. G. Kreusch. Nov 72, 211p EPA-R2-72-056
Contract DI-14-12-887
Paper copy available from GPO $2.75 as EP1.23/2:72-056.

Descriptors: (*Mine waters, *Ion exchanging), (*Water treatment, Mine waters), Cation exchanging, Anion exchanging, Regeneration (Engineering), Potable water, Design, Industrial plants, Cost estimates, Performance evaluation, Process charting, Water pollution.
Identifiers: *Mine acid drainage, *Water pollution control.

In areas where acid mine drainage has diminished the available water supplies, processes which are capable of producing potable water from this drainage are of interest. Ion exchange processes have this capability. The investigation was intended to study several conventional ion exchange processes, using commercially available materials and to determine if any of these processes could be used to produce potable water from acid mine drainage. The three best systems were found to be: Strong acid cation exchanger regenerated with sulfuric acid; Weak base anion exchanger regenerated with caustic soda; and Weak base anion exchanger regenerated with sodium hydroxide and carbon dioxide (modified Desal process). Treatment plants in three sizes were designed for each system so that cost estimates could be established.

OXIDATION OF PYRITES IN CHLORINATED SOLVENTS.
Environmental protection technology series,
Joseph A. Boros, Donald R. Brenneman, and Joseph C. Troy. Nov 72, 54p EPA-R2-72-069
Paper copy available from GPO $1.00 as EP1.23/2:72-069.

Descriptors: (*Pyrite, *Chlorination), (*Hydrometallurgy, Pyrite), (*Oxidation, Pyrite), Spoil, Oxygen, Coal mines, Water pollution control, Sulfide minerals, Iron ores, Mine waters, Chlorine, Regeneration (Engineering), Organic solvents, Chlorine aliphatic compounds, Ultraviolet radiation, Reaction kinetics, Iron chlorides.
Identifiers: *Water pollution control, Mine wastes.

The purpose of the study was to develop methods for extracting sulfur and iron compounds from pyritic waste materials, producing a final refuse that is incapable of causing water pollution, and at the same time, conserving useful mineral resources. The primary method under investigation was the chlorination of pyrites in non-aqueous solvents. An attractive feature of the proposed method was its cyclic nature. Test results indicated that the successful extraction of sulfur and iron compounds depended upon the continuous addition of chlorine gas to the system. The expected replacement of chlorine by ferric chloride and sulfur dichloride was not achieved under conditions of the study. Recycling solvents through beds of pyrite, elevated temperatures, and treatment in ultra-violet radiation yielded slight improvements in reaction rate.

CORRELATED STUDIES OF VANCOUVER LAKE - WATER QUALITY PREDICTION STUDY.
Environmental Protection Technology series,
Surinder K. Bhagat, William H. Funk, and Donald L. Johnstone. Nov 72, 120p EPA-R2-72-111
Paper copy available from GPO $2.00 as EP1.23/2:72-111.

Descriptors: (*Lakes, Reclamation), (*Vancouver Lake, *Water pollution), (*Water quality, Mathematical models), Columbia River, Sediments, Hydrology, Coliform bacteria, Algae, Nutrients, Seasonal variations, Predictions, Dissolved gases, Oxygen, Computer programs, Runge-Kutta method, Limnology, Flushing.
Identifiers: Eutrophication.

The study deals with the restoration of water quality of shallow, polluted, and eutrophic lakes. Dredging and removing of lake bottom sediments and introducing better quality water are the restoration measures explored. Vancouver Lake, Washington, was used as a test case. Hydrologic, hydrographic, hydrodynamic, and water quality information, provided by separate but correlated studies, was combined with the aid of mathematical simulation models. Dissolved oxygen (DO) was used as an indicator of the overall water quality in the system. In addition to the DO model, the aquatic life model for computing time-varying levels of phytoplankton and bacteria was also tried. The validity of these models was verified with the actual field data. After verifications of the models under the existing conditions, they were used to project and predict the water quality of Vancouver Lake as will be affected by dredged lake depths and introduced flows from the Columbia River.

Prepared in cooperation with Kentucky Dept. of Natural Resources. Lexington.
Paper copy available from GPO $2.00 as EP1.23/2:72-119.

Descriptors: (*Mine waters, *Irrigation), (*Spoil, Irrigation), (*Water reclamation, Mine waters), Neutralizing, Feasibility, Nutrients, Plant growth, Spraying, Cost estimates, Water pollution, Calcium oxides, Water analysis, Coal mines, Strip mining.
Identifiers: *Mine acid drainage, *Water pollution control, Strip mine wastes.

The objective of the study was to determine the feasibility of conducting a full-scale demonstration project on the use of neutralized acid mine drainage to irrigate new vegetative cover on regraded spoil banks. Determination of project feasibility was based upon the performance and results of the following investigative measures: waters of receiving streams and pit discharges were analyzed and evaluated for treatment; regraded spoil banks were sampled and analyzed for requirements necessary for vegetative survival; and weir structures, monitor enclosures and instruments were evaluated. Four irrigation techniques were evaluated before a high pressure spray system was selected as the most practical.

Identifiers: *Water pollution control.

The effects and means of correcting combined sewer overflows and separate storm and sanitary sewer discharges were inventoried on a national basis in 1967 and compiled. On-site personal interviews with the public officials of approximately 900 communities in the United States collected over 250,000 pieces of data which have been analysed and grouped by State, river basin, and population group to define the problems of combined sewer facilities and overflows. Nationwide projections were made for major items of interest including area and population served by combined sewers, overflow locations, type and number of regulators, associated land and water uses, estimates of costs for sewer separation by States, alternate control and/or treatment methods, and consideration of other aspects of the overall problem.

REMOTE SENSING STUDY OF THERMAL DISCHARGES TO LAKE MICHIGAN, WISCONSIN, ILLINOIS, INDIANA, AND MICHIGAN.

Sep 72, 77p
Presented at the Fourth Session of the Lake Michigan Enforcement Conference on 21 Sep 72. See also PB-214 407.

Descriptors: (*Lake Michigan, Water pollution), (*Water pollution, Heat), (*Electric power plants, Water pollution), Michigan, Indiana, Wisconsin, Illinois, Law enforcement, Aerial photography, Infrared scanners, Remote sensing.
Identifiers: *Thermal pollution, Water pollution detection.

An aerial reconnaissance study was conducted along pre-designated segments of the shoreline of Lake Michigan on September 14, 1972. The purpose of this remote sensing study was to document the extent of thermal discharges from the major electric power plants over the area extending from Muskegon, Michigan, to Twin Creeks, Wisconsin and to see if they are following the recommendations of the Lake Michigan Enforcement Conference. Nine of the ten plants covered were violating the recommended 3 F maximum temperature increase at the distance of 1,000 feet from an outfall. In addition, six of the power plants were also violating this permitted 3 F increase even at a distance of 2,000 feet from the plant discharge. It was also observed that the thermal plumes from some sources were overlapping. It was concluded that the recommendations of the Lake Michigan Enforcement Conference are not being met by many sources of thermal and industrial discharges within the Conference area.

AMMONIA REMOVAL IN A PHYSICAL-CHEMICAL WASTEWATER TREATMENT PROCESS.
Environmental Protection Technology series,
Robert A. Barnes, Peter F. Atkins, Jr., and Dale A. Scherger. Nov 72, 68p* EPA-R2-72-123
Contract EPA-68-01-0049
Paper copy available from GPO $1.25 as EP1.23/2:72-123.

Descriptors: (*Chemical removal (Sewage treatment), *Ammonia), (*Sewage treatment, Chemical removal (Sewage treatment)), (*Chlorination, Ammonia), Amines, Pilot plants, Performance evaluation, Coagulation, Activated carbon treatment, Phosphorus, Nitrogen, Biochemical oxygen demand, Particles.
Identifiers: *Chloramines, *Physical chemical treatment, Dechlorination, Owosso (Michigan).

Discussed is a pilot scale study for ammonia removal at Owosso, Michigan, involving a physical-chemical wastewater treatment system consisting of chemical coagulation (lime to pH 8.8 to 9.4) sedimentation, deep bed filtration, carbon ad-

sorption, chlorination to oxidize ammonia, and carbon dechlorination to remove free chlorine and chloramines. Ammonia-nitrogen was removed to any desired level by the chlorination-dechlorination system. Complete removal would require a chlorine to ammonia feed ratio of 9 to 1. The dechlorination carbon removed free chlorine and also the chloramines formed at less-than-breakpoint operation. There is an initial ammonia-nitrogen breakthrough when using fresh dechlorination carbon which is attributed to acclimation rather than continuous leakage. An hypothesis describing chloramine removal is presented.

DESIGN MANUAL FOR UPGRADING EXISTING WASTEWATER TREATMENT PLANTS,
P. Krishnan, and C. M. Mangan. Oct 71, 275p*
Contract DI-14-12-933
Paper copy available from Environmental Protection Agency, Washington, D.C. or Regional Offices, Free.

Descriptors: (*Sewage treatment, Upgrading), (*Manuals, Sewage treatment), Optimization, Design, Trickling filtration, Activated sludge process, Clarification, Aeration, Activated carbon treatment, Odor control, Disinfection, Chlorination, Sludge drying, Sludge digestion.
Identifiers: Sewage treatment plants.

The main purposes of the manual are to examine situations that necessitate upgrading of existing municipal wastewater treatment plants and to discuss and evaluate the corrective actions that are required to upgrade these existing plants. Upgrading to overcome organic and hydraulic overloadings and/or to meet more stringent treatment requirements is considered. The information presented is specifically adapted to plants having capacities of less than 5 mgd. The manual emphasizes that operational improvement and modifications to existing unit operations be considered as the logical initial approach to upgrading existing treatment plants. It examines in depth the capabilities, limitations, and interrelationships of the various unit processes. The operation and maintenance requirements of the upgraded treatment plants are also briefly examined.

PROCESS DESIGN MANUAL FOR SUSPENDED SOLIDS REMOVAL.

Oct 71, 149p*
Contract DI-14-12-930
Paper copy available from Environmental Protection Agency, Washington, D.C. or Regional Offices. Free.

Descriptors: (*Sewage treatment, *Suspended sediments), (*Sewage filtration, *Manuals), Design, Coagulation, Precipitation (Chemistry), Filter aids, Diatomaceous earth, Flocculating, Settling, Cost estimates, Alums.
Identifiers: Microscreening.

The manual comprises a compilation of information on the practice of suspended solids removal from municipal wastewaters. General engineering considerations are cited with respect to their impact on the design of treatment facilities. Specific processes used for suspended solids removal are described, discussed and illustrated through the use of data from installations which have employed these processes. Current technology and advanced methods of treatment are stressed in order to provide usable information for implementation in design of new treatment facilities. Some aspects of the operation and maintenance requirements of the described unit processes are delineated, along with the overall estimated costs of construction and operation. The information and data provided are presented in such a manner that they can be readily incorporated into practice. (Author)

PROCESS DESIGN MANUAL FOR CARBON ABSORPTION.

Oct 71, 95p*
Contract DI-14-12-928
Paper copy available from Environmental Protection Agency, Washington, D.C. or Regional Offices. Free.

Descriptors: (*Activated carbon treatment, *Manuals), (*Sewage treatment, Activated carbon treatment), Dissolved organic matter, Regeneration (Engineering), Design, Cost engineering, Absorption, Air pollution.
Identifiers: Physical chemical treatment.

Carbon's great efficiency in organic removal has promoted its use for upgrading conventional plant performance. Successful use of carbon in tertiary treatment has led to proposals that it be used for secondary treatment as well, i.e., as a replacement for biological treatment. The manual examines major design parameters and unit operations (including pretreatment) which are important in carbon adsorption systems. Existing carbon plant designs are evaluated. Costs are evaluated for the various unit operations. Various plant configurations are discussed. Carbon regeneration (a prerequisite for economic feasibility) is discussed and the necessary equipment is described. Other aspects discussed include: air pollution control devices for the regeneration furnace, personnel requirements, isotherm and pilot testing, carbon dewatering, biodegradation of organics in carbon columns. (Author)

PROCESS DESIGN MANUAL FOR PHOSPHORUS REMOVAL.

Oct 71, 195p*
DI-14-12-936
Paper copy available from Environmental Protection Agency, Washington, D.C. or Regional Offices. Free.

Descriptors: (*Chemical removal (Sewage treatment), *Phosphorus), (*Sewage treatment, Chemical removal (Sewage treatment)), (*Manuals, Chemical removal (Sewage treatment)), Precipitation (Chemistry), Calcium oxides, Aluminates, Iron chlorides, Alums, Settling, Performance evaluation, Sludge disposal, Design, Activated sludge process, Cost estimates.

The manual discusses phosphorus removal methods that have been found effective and practical for use at wastewater treatment plants. All the methods included involve chemical precipitation of the phosphorus and removal of the resultant precipitate. Precipitants include salts of aluminum and iron, and lime. The practical points of addition are before the primary settler, in the aerator of an activated sludge plant, before the final settler, or in a tertiary process. Included in the discussion of each treatment method is a description of the method, pilot or full-scale performance data, equipment requirements, design parameters, and costs. This information should be of value to designers, municipal officials, regulatory agencies, city planners, and treatment plant operators. (Author)

PHYSICAL-CHEMICAL NITROGEN REMOVAL FROM MUNICIPAL WASTEWATER,
Alan F. Cassel, Thomas A. Pressley, Walter W. Schuk, and Dolloff F. Bishop. Mar 71, 29p

Descriptors: (*Chemical removal (Sewage treatment), *Ammonia), (*Sewage treatment, Chemical removal (Sewage treatment)), Chlorination, Ion exchanging, Performance evaluation, Pilot plants, Nitrogen.
Identifiers: *Physical chemical treatment, Clinoptilolite, Zeolites.

Selective ion exchange for ammonia removal, using the natural zeolite, clinoptilolite, was applied to lime clarified and filtered raw wastewater both before and after carbon adsorption. Intermittant operation of the ion exchange unit with minimum operator surveillance produced an average of 75% removal of NH3-N over a 10 month period. Breakpoint chlorination for ammonia removal was also studied by applying it to filtered secondary effluent and to selective ion exchange effluent. Chlorination of filtered secondary effluent in an agitated reactor removed essentially all the NH3-N with 95% conversion to N2 gas. Process variables are discussed.

ACTIVATED SLUDGE TREATMENT WITH OXYGEN,
John B. Stamberg, Dolloff F. Bishop, and Gordon Kumke. Mar 71, 31p

Descriptors: (*Activated sludge process, *Oxygenation), (*Sewage treatment, Activated sludge process), Design, Performance evaluation, Oxygen, Pilot plants, Clarification, Chemical removal (Sewage treatment), Mixing, Nitrogen, Phosphorus, Dissolved organic matter.

The report discusses the use of pure oxygen in an activated sludge sewage treatment system. It produces effluents comparable in BOD and suspended solids to those of a parallel diffused aeration system with an aeration time of 3.6 hours. Consistently over 95% of the supplied oxygen was used in the reactor which employed co-current liquid and gas flow contacting. The microbial organisms visually were found to be essentially the same as a typical conventional system; however, their rate of activity was greater.

REMOVAL OF DISSOLVED CONTAMINANTS FROM MINE DRAINAGE,
Jan D. Miller. Dec 72, 61p EPA-R2-72-130
Paper copy available from GPO $1.25 as EP1.23/2:72-130.

Descriptors: (*Mine waters, *Adsorption), (*Tailings, *Adsorbents), (*Water pollution, Mine waters), Metals, Tests, Iron, Copper, Zinc, pH.
Identifiers: *Mine acid drainage, *Water pollution control.

Eleven mill tailing samples from locations throughout the Rocky Mountain region were tested for their effectiveness in removal of dissolved contaminants from mine drainage. The average capacity of the tailings tested was 9.8 mg of iron per gram of tailing with a range of capacities from 6 mg/g to 15 mg/g. From these studies it was concluded that for almost all tailing samples, removal was accomplished mainly due to hydrolytic adsorption of metal ions with a small contribution due to the inherent basicity of the tailing. In the other case, removal occurred via reaction with calcareous components of the sample. Continuous column, or stationary bed tests, in the laboratory and in the field were not nearly as effective. It appears that for effective removal a stirred tank reactor will be required.

HOLLOW FIBER TECHNOLOGY FOR ADVANCED WASTE TREATMENT.
Environmental Production Technology series,
J. D. Bashaw, J. K. Lawson, and T. A. Orofino.
Dec 72, 94p* EPA-R2-72-103
Contract DI-14-12-926
Paper copy also available from GPO $1.25 as EP1.23/2:72-103.

Descriptors: (*Sewage treatment, *Osmosis), Cellulose acetate, Membranes, Spinning (Extruding), Design, Fouling, Performance evaluation, Chemical removal (Sewage treatment).
Identifiers: *Hollow fiber membranes, *Reverse osmosis, Tertiary sewage treatment.

The utility of hollow fiber reverse osmosis membranes in renovation of secondary municipal effluent was investigated through construction, laboratory evaluation, and monitoring in field service of various hollow fiber modules. All units incorporated cellulose acetate hollow fibers, annealed for sodium chloride rejections of 80-95% at 250 psi external operating pressure. Product water capacities ranged from 50-300 gallons per day. Module designs considered included the single seal end, looped fiber bundle; double seal end, parallel bundle; radial flow parallel bundle; and a rolled, woven hollow fiber fabric. The typical flux-rejection characteristics of the basic fiber system (4 gfd-95%) were observed in waste water service, but steady-state flux, maintained only with regular detergent flushes, was usually less than 1 gfd, with an accompanying decline in selectivity. A notable exception was the woven hollow fiber fabric design, which showed improved retention of start-up characteristics and minimum effects of shell-side fouling during short-term field tests. EVALUATION OF WASTE WATERS FROM PETROLEUM AND COAL PROCESSING.
Environmental Protection Technology series,
George W. Reid, and Leale E. Streebin. Dec 72, 209p* EPA-R2-72-001
Paper copy also available from GPO $2.75 as EP1.23/2:72-001.

Descriptors: (*Petroleum industry, Water pollution), (*Coal preparation, Water pollution), (*Water pollution, *Industrial wastes), (*Refineries, *Industrial waste treatment), Drilling, Petroleum transportation, Oil storage, Coal mines, Coke, Brines, Injection wells, Tanker ships, Waste disposal, Cost estimates, Phenols, Flotation.
Identifiers: *Mine acid drainage, *Liquid waste disposal, *Oil pollution, *Oil wastes, *Water pollution control, Biological industrial waste treatment.

The report presents an evaluation on pollution problems, abatement procedures and control techniques relevant to the petroleum and coal industries. Petroleum wastes are discussed under three broad sections: Drilling-production, Transportation and storage, and Refining. Within each section, petroleum wastes are identified as to their source, volume, and composition, and waste treatment methods are discussed. The results of a field study of three small refineries are also reported. Coal mining, coal processing, and coal utilization, the wastes associated with each, and the corresponding control measures are presented. Acid mine drainage, the most significant pollution problem from coal mining, and possible control measures are discussed. The major pollution problems associated with coal processing originate from coal cleaning, the coking process, and refuse disposal. The production of coke by carbonization of coal and its pollutants are reviewed.

REMOVAL OF ORGANIC AND EUTROPHYING POLLUTANTS BY CHEMICAL - BIOLOGICAL TREATMENT.

Apr 72, 138p EPA-R2-72-076, W73-04636

Descriptors: (*Sewage treatment, *Chemical removal (Sewage treatment)), (*Phosphorus, Chemical removal (Sewage treatment)), (*Nitrogen, Chemical removal (Sewage treatment)), Activated sludge process, Pilot plants, Precipitation (Chemistry), Design criteria, Cost estimates, Nitrification, Engineering drawings, Aluminates, Alums.
Identifiers: Denitrification, Sodium aluminates.

The principal objective was to demonstrate, on a pilot plant scale (65,000 gallons per day), that a combined biological-chemical treatment scheme can effectively remove organic carbon, phosphorus and nitrogen from wastewater. The treatment scheme consisted of: Organic carbon removed by activated sludge type processes; Phosphorus removal by chemical precipitation with aluminum, and Nitrogen removal by biological-denitrification techniques. Process design loading factors were developed. The total cost of wastewater treatment was estimated.

CHARACTERIZATION OF STREAM REAERATION CAPACITY,
Ecological research series,
E. C. Tsivoglou, and J. R. Wallace. Oct 72, 324p EPA-R3-72-012, W73-05213
Paper copy available from GOP $3.75 as EP1.23:72-012.

Descriptors: (*Stream pollution, *Aeration), (*Water pollution, Aeration), Effectiveness, Mathematical models, Stream flow, Diffusion, Tracer studies, Dissolved gases, Oxygen, Biochemical oxygen demand, Hydrography, Field tests, Turbulent flow, Mass transfer.
Identifiers: *Water pollution control.

Research was conducted to characterize stream reaeration capacity in terms of the stream hydraulic properties and to develop procedures for evaluating the effects of pollutants on reaeration. A gaseous tracer procedure was used in the field studies for measurement of reaeration. Not only have these studies incorporated a wide range of hydraulic features, but also, the range of BOD's and temperatures encountered was large. Tests of observed vs. predicted values of K (2) have shown that none of the available models is capable of providing dependable predictions of stream reaeration capacity, especially under highly turbulent flow conditions. A new model was derived that explains the reaeration capacity of a stream in terms of the rate of energy dissipation and furthermore, provides dependable predictions.

THE SWIRL CONCENTRATOR AS A COMBINED SEWER OVERFLOW REGULATOR FACILITY,
Richard Field. Sep 72, 184p* EPA-R2-72-008, W73-05214
Paper copy available from GPO $2.25 as EP1.23/2:72-008.

Descriptors: (*Overflows, *Flow regulators), (*Combined sewers, Overflows), (*Separators, Combined sewers), Flow control, Swirls (Concentrators), Design, Mathematical models, Settling, Solids, Hydraulic models.
Identifiers: Sewage flow rate, *Water pollution control.

A combined sewer overflow regulator which by induced hydraulic conditions separates settleable and floatable solids from the overflow was studied. A mathematical model was also prepared to determine a basis for design. The study also used a hydraulic model to determine swirl concentrator configurations, flow patterns and settleable solid removal efficiency. Excellent correlation was found between the two studies. It was found that at flows which simulate American experience a vortex flow pattern was not effective. However, when flows were restricted, a swirl action occurred and settleable solids were concentrated in the outflow to the interceptor in a flow of two to three percent as compared to the quantity of overflow through a central weir and down shaft. The swirl concentrator appears to offer a combined sewer overflow regulator that effectively regulates the flow and improves the quality of the overflow, with few moving parts.

POLYMER FILM OVERLAY SYSTEM FOR MERCURY CONTAMINATED SLUDGE - PHASE I,
Michael U. Widman, and Michael M. Epstein.
May 72, 84p W73-05218, EPA-16080-HTZ-05/72
Contract EPA-68-01-0088
Paper copy available from GPO $1.00 as EP1.16:16080HTZ05/72.

Descriptors: (*Water pollution, *Mercury (Metal)), (*Polymeric films, Sediments), (*Barrier coatings, *Sediments), Mercury halides, Chlorides, Mercury organic compounds, Nylon 6, Polyethylene, Cost estimates, Continuous casting, Extrusion.
Identifiers: *Water pollution control, Mercury/dimethyl.

Various polymer films to be used in sealing mercury contaminated sediments were studied. Materials were selected for detailed study on the basis of barrier properties to mercury compounds, strength, handleability, and estimated service life. Although most polymers are effective barriers to $HgCl_2$, the resistance to organic compounds can vary from poor to very good. Nylon 6 and high density polyethylene proved to be the most effective barriers to organic mercury. It was concluded that polymer films can be effectively used to seal mercury contaminated sediments. Estimated costs for film deployment are given and equipment concepts for film deployment were demonstrated. The nylon 6 system was recommended for field demonstration.

AIR MODULATED VACUUM OIL RECOVERY COLLECTION OF SPILLED OIL (FOAMS).
Environmental Protection Technology series,
Clifford Risley. Aug 72, 67p EPA-R2-72-033, W73-05217
Paper copy available from GPO $0.75 as EP1.23/2:72-033.

Descriptors: (*Oils, *Vacuum cleaners), (*Water pollution, Oils), Collecting methods, Foams, Separation, Vacuum apparatus, Tests, Foaming agents.
Identifiers: *Oil pollution removal, Oil spills.

An air modulated vacuum oil recovery technique was developed in an experimental and engineering design project as a method of collecting oil spilled on water. A foam is produced using foaming agents in order to facilitate the removal. The prototype device possessing a self contained power source proved capable of rapidly recovering thin slicks of oil (less than 4 mm) from water surfaces with only a small amount of water present (less than 10% by volume) in the recovered oil. The prototype recovered oil at the rate of 450 gal/hr for a thin oil slick. Thicker slicks could be recovered much more rapidly. The process and laboratory equipment is described.

PB-214 696/7
Lake Michigan Enforcement Conference. Lake Michigan Interstate Pesticides Committee.
AN EVALUATION OF DDT AND DIELDRIN IN LAKE MICHIGAN.
Ecological research series.

Aug 72, 140p W73-05380, EPA-R3-72-003
Paper copy available from GPO $1.25 as EP1.23:72-003.

Descriptors: (*Water pollution, *Pesticides), (*Lake Michigan, Water pollution), (*Chlorine organic compounds, Water pollution), (*Ecology, Pesticides), Fresh water fishes, Invertebrates, DDT, Dieldrin, Surface water runoff, Indicator species, Residues, Accumulation, Birds, Economic analysis, Trout, Salmon, Public health, Phthalates, Industrial wastes, Sewage, Legislation.
Identifiers: *Water pollution effects (Animals), *Water quality data, *Pesticide residues, *Biphenyl/chloro.

An investigational program was designed to provide information essential to evaluate the impact of pesticides on Lake Michigan. Data was collected from waters, wastewaters, invertebrate organisms, and fish; analysis of samples from open water for the purpose of developing general residue levels was impractical. Tributary streams to Lake Michigan discharge chlorinated hydrocarbon pesticides into the lake; urban and fruit-growing areas are the more significant contributors of pesticides. The polychlorinated biphenyls are present in sufficient quantity, with sufficient evidence of biological impact, to warrant independent evaluation. Resident fish appear to be the most reliable biological monitor. The biological magnification of chlorinated hydrocarbon insecticides in sport and commercially valuable fish species as well as other wild animals are discussed.

Paper copy available from GPO $0.95 as EP1.23/2:72-010.

Descriptors: (*Insecticides, *Water analysis), (*Carbamates, Water analysis), (*Phosphorus organic acid esters, Water analysis), Warning systems, Monitors, Hazardous materials, Cholinesterase inhibitors, Design, Wiring diagrams, Performance evaluation, Enzymes.
Identifiers: *Electrochemical enzyme alarms, Enzyme technology, *Water pollution detection.

An apparatus for the detection and monitoring of water supplies for hazardous spills of organophosphate and carbamate insecticides has been designed and fabricated. The new unit is called the Cholinesterase Antagonist Monitor, CAM-1, because it produces an alarm in 3 min. when toxic or subtoxic levels of cholinesterase antagonists are present in water. Response of this apparatus to subtoxic levels of azodrin, sevin, dimetilan, malathion, parathion and DDVP has already been demonstrated. CAM-1 uses immobilized cholinesterase for the collection of cholinesterase inhibitors from the water supplies. The activity of the immobilized cholinesterase is determined automatically in an electrochemical cell by passing a substrate solution over the enzyme at regular time periods. A minicomputer is used to automate the detection process and to signal an alarm. (Author)

PILOT SCALE STUDY OF ACID MINE DRAINAGE.

Mar 71, 85p W73-05216, EPA-WQO-14010-EXA-03/71
Contract DI-14-12-97
Paper copy available from GPO $1.00 as EP1.16:14010EXA03/71.

Descriptors: (*Coal mines, Mine waters), (*Water pollution, *Mine waters), (*Pyrite, *Oxidation), Sulfates, Field tests, Oxygen, Transport properties, Diffusion, Aquatic microbiology, Inorganic sulfides, pH, Hydrology, Sealing, Seasonal variations, Ohio.
Identifiers: *Mine acid drainage.

In order to study pyrite oxidation and resulting acid mine drainage, a research facility was developed using a small, long-abandoned drift mine and six 33 inch diameter auger holes drilled in order to have comparable, isolated, experimental 'mines' on a pilot scale basis. Experimental data and observations of the effect of oxygen concentration on acid production have shown the location of major reaction zones and indicated that bacterial catalysis of pyrite oxidation is not a significant factor in production of acid mine drainage. When the correspondence between holes has been established, one hole will be used as a reference mine so that fluctuations due to hydrologic variations can be separated from effects of experimentally imposed changes in the other holes.

CONTROL OF ATMOSPHERIC EMISSIONS FROM PAINT AND VARNISH MANUFACTURING OPERATIONS.
Technical rept.,
Robert L. Stenburg. Jun 58, 33p SEC-TR-A58-4

Descriptors: (*Air pollution, *Hydrocarbons), (*Varnishes, Air pollution).
Identifiers: *Paint industry, *Air pollution control.

Because of the large volume and wide variety of oils and resins processed, and because of the type and amount of materials lost to the atmosphere during the high temperature cooking processes, the production of paint and varnish vehicles establishes itself as the principal source of atmospheric pollution in this industry. The report describes the sources, control, and types of air pollution.

AQUATIC AND WETLAND PLANTS OF SOUTHWESTERN UNITED STATES,
Donovan S. Correll, and Helen B. Correll. Jan 72, 1792p W73-04999, EPA-16030-DNL-01/72
Paper copy available from GPO $7.75 as stock no. 5501-0177, EP1.16:16030DNL01/72.

Descriptors: (*Aquatic plants, *Taxonomy), (*United States, Aquatic plants), Swamps, Phreatophytes, Ferns, Water pollution, Plant growth, Plant ecology, Plant anatomy.
Identifiers: *Southwestern United States, Wetlands.

The primary aim of this detailed work is to enable one to identify ferns and flowering plants that grow naturally in polluted and unpolluted aquatic and wetland habitats in southwestern United States. These habitats may be permanently or seasonally wet. The basic criterion for the inclusion of a species is its ability to withstand a per-

manent or seasonally long submersion of at least its root system. This will unavoidably include some ubiquitous species. In addition, plants classed as phreatophytes, or those plants whose deeply penetrating roots tap the groundwater, are included. The term 'aquatic' represents one extreme condition of habitat covered by this research project, and is used to designate those plants that can attain their life cycle only in water. The term 'wetland' incorporates all other conditions of habitat, including the other extreme. (Author)

WATER POLLUTION CONTROL RESEARCH AND TRAINING GRANTS. LIST OF 1965 AWARDS: RESEARCH GRANTS, RESEARCH FELLOWSHIPS, TRAINING GRANTS, DEMONSTRATION GRANTS.

1965, 63p PHS-Pub-1100

Descriptors: (*Water pollution, *Grants).

The Federal Water Pollution Control Act authorizes the award of grants-in-aid for research, training, and demonstration projects, and for research fellowships. The purposes of these grants are to encourage, cooperate with, and assist appropriate authorities, agencies, institutions, and individuals in the conduct of studies and training relating to the causes, control and prevention of water pollution. Support is available for projects and fellowships designed to improve the sanitary condition of water, to conserve water for public water supplies, propagation of fish and aquatic life and wildlife, recreational purposes, agricultural, industrial and for other legitimate uses. Four types of grants are available. The report lists, by state, the recipients of these grants. (Author)

PHOSPHATE REMOVAL BY ACTIVATED SLUDGE. AMENABILITY STUDIES AT BALTIMORE, MARYLAND,
M. R. Scalf, F. M. Pfeffer, L. D. Lively, J. L. Witherow, and C. P. Priesing. Jun 69, 57p

Descriptors: (*Chemical removal (Sewage treatment), *Phosphorus), (*Sewage treatment, Phosphorus), (*Activated sludge process, Phosphorus), Inorganic phosphates.

Phosphate removal by sorption on activated sludge was investigated in pilot and plant scale at the Baltimore, Maryland, Back River Sewage Works. These studies revealed that the activated sludge plant was obtaining high phosphorus removal under conditions similar to those found in the San Antonio Rilling Plant. Pilot investigations were made on the amenability of the waste and activated sludge to phosphate removal. The effects of suspended solids and dissolved oxygen concentrations in the mixed liquor, phosphate additions, oxygen demanding substrate additions, and the addition of aluminum, iron, and magnesium salts on phosphate removal were determined and found to agree with previous information. The waste and sludge were very amenable to phosphate removal. (Author)

HEALTH AND SAFETY IN THE ATOMIC ERA,
Conrad P. Straub. 1958, 20p
Sponsored by the New Jersey Chamber of Commerce, Held at Newark, New Jersey, October 2, 1958, for Publication' in the Proceedings of the New Jersey Atomic Energy Symposium.

Descriptors: (*Radioactive contaminants, *Public health), Sources.

An effort has been made to show what is being done by the AEC, the PHS, and other Federal and local agencies to measure the amount of radioactivity contributed from a multiplicity of sources and relate their data to potential public health implications. There is a need for more data of this nature, particularly in terms of the specific radionuclides present in food materials grown all over the nation and the world. With such information on hand, we shall be able to define with a greater degree of accuracy the public health implications of such radiation levels and to provide a better basis for developing more realistic maximum permissible concentration levels in a greater variety of environmental media. AERATED LAGOON TREATMENT OF FOOD PROCESSING WASTES.
Water pollution control research series,
Kenneth A. Dostal. Mar 68, 55p EPA-12060-03/68
Paper copy available from GPO $1.25 as EP1.12060-03/68.

Descriptors: (*Food processing, *Industrial waste treatment), (*Lagoons (Ponds), Industrial waste treatment).
Identifiers: *Aeration ponds, *Water pollution control, *Pea processing.

The food-processing industry is the second largest industrial source of waterborne organic wastes in the Pacific Northwest. Adequate secondary treatment of these wastes by conventional processes is complicated by the seasonal nature of most of the food-processing plants and the large capital expenditures for waste treatment facilities which may be used for only a few months each year. The report presents the data collected and the conclusions drawn from a six week period of sampling of an aerated lagoon used to treat wastes from the frozen pea processing plant of Kelley-Farquhar located at Ferndale, Washington.

SULFIDE TO SULFATE REACTION MECHANISM. A STUDY OF THE SULFIDE TO SULFATE REACTION MECHANISM AS IT RELATED TO THE FORMATION OF ACID MINE WATERS,
E. E. Smith, and K. S. Shumate. Feb 70, 129p
Prepared in cooperation with Federal Water Pollution Control Administration.
Paper copy available from GPO $1.50 as stock no. EP2.10:14010 FPS-02/70.

Descriptors: (*Sulfide minerals, Oxidation), (*Pyrite, *Oxidation), (*Water pollution, *Mine waters), (*Biodeterioration, Pyrite), Aquatic microbiology, Iron sulfides, Ferrobacillus.
Identifiers: *Mine acid drainage.

A detail study of the mechanisms and kinetics of the chemical reactions responsible for acid mine drainage is discussed. The mineralogical features of the solid phase reactant (pyrite) that determine its reactivity were described. The rate-limiting reactions and variables affecting the rate of these reactions were identified. It was found that two basic oxidation modes are important: oxygenation, in which oxygen is the immediate oxidizing agent; and ferric ion (or microbiologically catalyzed) oxidation, in which ferric ions are the oxidants. From a knowledge of the dissolved oxygen, ferric/ferrous ratio, and total iron ion content at the reaction site, the reaction regime can be determined. Kinetic equations were derived for both reaction modes. From these basic relationships the oxidation rate in real pyritic systems can be accurately predicated when conditions at the reaction site are known. (Author)

QUANTITATIVE STUDIES OF BACTERIAL POLLUTION AND NATURAL PURIFICATION IN THE OHIO AND ILLINOIS RIVERS,
J. K. Hoskins. 1925, 23p

Descriptors: (*Ohio River, *Water pollution), (*Illinois River, *Water pollution), (*Bacteria, Water pollution), Purification.
Identifiers: *Water quality data.

The Public Health Service has been engaged for some years in studies of various phenomena concerned with the pollution and natural purification of streams. One general purpose of these studies has been to evaluate the intensity of bacterial pollution to be expected from known populations discharging sewage into streams of known discharge and velocity of flow. With this end in view we have collected detailed bacteriological data from two streams of quite different types, the Ohio and Illinois Rivers. Published observations on the Ohio River covered a period ot three years, while those of the Illinois River were continued for a complete year, so that in each case information was obtained throughout an entire seasonal cycle. OHIO RIVER POLLUTION SURVEY: BIOLOGICAL STUDIES.
Final rept.

1942, 131P
Supplement 'F' to Final Report to the Ohio River Committee, Ohio River Pollution Survey.

Descriptors: (*Ohio River Basin, *Biological surveys), (*Water pollution, Ohio River Basin).
Identifiers: *Water pollution effects (Plants), *Water pollution effects (Animals).

The primary purpose of the biological studies in connection with the Ohio River Pollution Survey was twofold; first, to determine present biological conditions as a record to be compared with conditions after future changes due particularly to remedial measures which may be instituted, and second, to determine the effect, particularly of a destructive nature, of present sources of pollution on stream biological communities and fish life as a guide in judging the need for corrective measures. Secondary purposes include determination of what biological and chemical conditions may be typical of different pollutional situations, what factors under man's control are involved in creating these situations, and what combinations of these conditions may be allowed for designated stream uses. A PROCEDURE FOR THE DETERMINATION OF CITRIC ACID IN WATER AND SEWAGE,
G. E. Terhoeven, and L. R. Setter. Oct 49, 8p

Descriptors: (*Water analysis, *Citric acid), (*Colorimetric analysis, Citric acid).
Identifiers: *Water pollution detection.

The determination of 1 to 50 p.p.m. of citric acid in water and sewage is an adaptation of the micro method goven by Natelson. The procedure consists of the bromination and oxidation of citric acid in aqueous solution to pentabromacetone which is then extracted with petroleum ether. An alkaline aqueous extraction of the ether solvent transfers the pentabromacetone to the water phase. The extractant buffered at pH 9.2 with borax and containing the reducing agent thiourea converts the pentabromacetone to a yellow color complex which is compared visually with permanent color standards or spectrophotometrically at a wave length of 440 millimicrons. WATER QUALITY CONTROL STUDY AND PUBLIC HEALTH ASPECTS OF THE CACHE LA POUDRE PROJECT COLORADO.

Jun 65, 69p
Prepared in cooperation with Bureau of Reclamation, Denver, Colo.

Descriptors: (*Cache la Poudre River basin, *Water pollution), (*Colorado, Water pollution), Sources, Reservoirs.

A study was made which disclosed the need for water quality control in the study area. This need was based on the present development and the projected future population and industrial growth. The existing diversion practices and water supply make it impractical for the use of streamflow regulation as a means of water quality control in the study area at this time. Therefore, the report makes no recommendations for the inclusion of storage in Idylwilde Reservoir for the purpose of streamflow regulation for water quality control. Because of the complex nature of the water use practices and water quality problems which exist throughout much of the South Platte River Basin, a comprehensive study of the entire basin is needed to obtain optimum use of water within the basin. REMOVAL OF RADIOLOGICAL, BIOLOGICAL, AND CHEMICAL CONTAMINANTS FROM WATER.
Final technical rept.,
Richard L. Woodward, and Gordon G. Robeck.
1959, 139p SEC-TR-W59-2

Descriptors: (*Water treatment, *Detoxification), Military chemical agents, Military biological agents, Military radiological agents, Chlorination, Ion exchanging.

Hazard evaluation studies have shown that shore based Naval water supplies can be contaminated by chemical, biological, and radiological warfare agents. The greatest hazards to be guarded against appear to be radioactive fallout in surface waters and covert introduction of pathogenic vegetative bacteria or botulinum toxin into a water distribution system. Laboratory and engineering studies were conducted to determine the design criteria and cost estimates of providing and operating devices to protect against these contaminants. (Author)

THE PUBLIC HEALTH SERVICE RESEARCH PROGRAM IN AIR POLLUTION,
Arthur C. Stern. 1955, 11p
Presented at the Sanitary Engineering Division Session, Annual Convention of American Society of Civil Engineers, New York, N. Y., 24Oct 55.

Descriptors: (*Air pollution, *Project planning), (*Public health, Project planning).

In setting up its air pollution research program, the Public Health Service has taken the view that the principal research resource of the nation lies in its universities, research institutes, and in the research establishments of American industry. In order to make maximum utilization of this tremendous research potential, two mechanisms are being employed: research grants and research contracts. The efficiency of these research programs is discussed.

ALGAE-TEMPERATURE-NUTRIENT RELATIONSHIPS AND DISTRIBUTION IN LAKE ERIE - 1968,
Robert P. Hartley, and Chris P. Potos. Feb 71, 95p

Descriptors: (*Limnology, *Lake Erie), (*Algae, Limnology), (*Ecology, Lake Erie), Environments, Temperature, Nutrition, Growth, Population (Statistics), Ohio, Seasonal variations, Nutrients, Primary biological productivity.

The report describes the time and space distribution of measured chemical, physical, and biological factors for a one-year cycle in the western and central basins of Lake Erie. The nearshore descriptions are based upon data gathered in a biweekly sampling program at 17 Ohio domestic water supply intakes from March 1968 through March 1969. The midlake descriptions are based upon data gathered at 20 midlake stations sampled four times between May 1967 and January 1968. Although the sampling times for nearshore and midlake were one year apart, for the purposes of this report the data are assumed to be comparable.

BIO-ASSAY INVESTIGATIONS FOR INTERNATIONAL JOINT COMMISSION. NIAGARA FALLS SEWAGE DISPOSAL PLANT, NIAGARA FALLS, NEW YORK,
Croswell Henderson. 1956, 14p

Descriptors: (*Niagara River, *Bioassay), (*Water pollution, Niagara River), (*New York, Water pollution), (*Toxicology, Water pollution), Fresh water fishes, Indicator species.
Identifiers: *Sewage treatment effluent, *Water pollution effects (Animals).

The report covers an investigation of the toxicity to fish of the influent and effluent from the Niagara Falls Sewage Disposal Plant. Chemical wastes from several industries enter this plant along with domestic sewage from the city of Niagara Falls, New York. Chemical wastes may contain compounds which are highly toxic to aquatic life. These compounds, when mixed with or under the influence of other non-toxic components of the effluent or receiving waters, may exert an entirely different toxicity from that of the pure compounds. Bio-assays were made to evaluate directly the toxicity of these chemically complex wastes which enter the Niagara River.

A NEW MULTIPLE SIEVE DESIGN FOR SCREENING BOTTOM SAMPLES,
David N. Peters, and Tommy N. Redman. Jul 69, 7p

Descriptors: (*Aquatic animals, Sieves), (*Sieves, *Samplers), Invertebrates, Size screening.

Sampling devices used by aquatic biologists to collect macroinvertebrates in a lake or stream vary with the kind of substrate to be sampled. Even when properly used, these sampling devices collect large amounts of debris which may prevent the biologist from efficiently concentrating or separating macroinvertebrates in the sample. A combined washing-screening process, conducted immediately following collection, is the best procedure for concentrating and separating organisms from the sample. This procedure is usually accomplished with a No. 30 U. S. Standard Sieve (openings of approximately 0.6 millimeter) that retains macroinvertebrates. The design and utilization of this device is described.

NUTRIENT REQUIREMENTS AND BIOLOGICAL SOLIDS ACCUMULATION IN ANAEROBIC DIGESTION,
Richard E. Speece, and Perry L. McCarty. 1962, 28p
Presented at the International Conference on Sept 1962.

Descriptors: (*Sewage treatment, *Anaerobic processes), Digestion (Decomposition).
Identifiers: *Nutrient requirements.

Anaerobic digestion as known by the sanitary engineer is a unique and hardy process and has proved to be a powerful tool in the stabilization of strong organic wastes. Practically any type of organic matter can be decomposed to methane and carbon dioxide as the principal end products with very little in the way of toxic by-products being produced. The conversion of simple organic compounds to methane and carbon dioxide by the methane bacteria is a vital key to the successful operation of the process. Unsatisfactory digestion has usually been attributed to failure of the methane bacteria to process the simple organic compounds. The anaerobic process is studied and determine the growth requirements and synthesis relationships is studied in order to more fully utilize the excellent potentialities of anaerobic digestion as an organic waste treatment method and also to place process design on a stronger scientific basis.

A PILOT STUDY OF AIR POLLUTION IN PROVIDENCE, RHODE ISLAND.
Technical rept.,
Marvin D. High, Robert W. Slater, and Genaro G. Costantino. Jun 62 46p SEC-TR-A62-15
Prepared in cooperation with City of Providence and Public Health Service.

Descriptors: (*Air pollution, *Rhode Island).
Identifiers: *Providence (Rhode Island), *Air quality data.

The continued effort of Providence, Rhode Island to maintain desirable air quality through an effective air pollution control program resulted in a study of existing and potential levels of pollution. The study was in two equal periods, July 31 through August 18 and October 31 through November 17, 1961. Air samples collected at a centrally located downtown station were analyzed for settling, suspended particulates, dustfall, sulfur dioxide, oxides of nitrogen, total oxidants, and carbon monoxide. Meteorological data for the sampling periods were analyzed and then compared with long-term data for the respective sampling periods.

BIO-ASSAY INVESTIGATIONS,
Croswell Henderson, and H. A. Anderson. 1956, 59p
Prepared in cooperation with Donner-Hanna Coke Corp., Buffalo, N. Y.

Descriptors: (*Buffalo River, *Bioassay), (*Water pollution, Buffalo River), (*New York, Water pollution), (*Toxicology, Water pollution), Fresh water fishes, Industrial wastes.
Identifiers: *Water pollution effects (Animals).

In January 1956, field studies were initiated on a cooperative basis to determine the possible effects of industrial wastes from major Buffalo River industries on the eastern end of Lake Erie and the Niagara River. Buffalo River industries on the eastern end of Lake Erie and the Niagara River. Buffalo River industries cooperating in this project were National Aniline Division-Allied Chemical and Dye Corporation, Donner-Hanna Coke Corporation, and Socony-Mobile Company. Part I of this report covers an investigation of the toxicity to fish of intake water and final effluent from the Donner-Hanna Coke Corporation. By-product coke wastes contain some chemical compounds which are known to be toxic to aquatic life in relatively low concentration. Part II of this report covers an investigation of the toxicity to fish of the various process wastes.

PROBATIVE VALUE OF A SINGLE AIR SAMPLING STATION IN A SOURCE-RECEPTOR PROBLEM.
Rept. for 16 Jan-15 Mar 56,
James E. Meeker. 1956, 17p
Presented at the Annual Meeting of the East Central Section of the Air Pollution Control Association, Columbus, Ohio, 17-18 Sep 56.

Descriptors: (*Air pollution, *Ohio), Industrial wastes.
Identifiers: *Saint Bernard (Ohio), *Air pollution sampling.

A two-month (Jan. 16 - March 15, 1956) study was undertaken to learn the probative value of a single field sampling station in determining whether air pollution experienced by a residential area in one city, St. Bernard, Ohio, was primarily attributable to a suspected group of industrial sources in that city, or to sources within the adjacent village of Elmwood Place and the surrounding city of Cincinnati. Results from the sampling station indicated that the combination of an excess of sulphates, nitrates and aliphatic hydrocarbons in St. Bernard air over concentrations elsewhere in Greater Cincinnati, an excess of SO2 and dirt shade associated with northerly winds, and visual observation of the travel of plumes from suspected sources confirm the suspicion that the alleged group of industrial sources are the cause of complaints of odorous air pollution in certain residential areas of St. Bernard. This study shows that it is possible to draw this limited type of conclusion from a short term study using a single air sampling station.

OFF-SITE MEDICAL PLANNING AND MANAGEMENT FOR AN EXPERIMENTAL UNDERGROUND NUCLEAR DETONATION,
Jamie K. Wheeler, Raymond T. Moore, and Melvin W. Carter. 8 Sep 70, 9p
Report on Project Sterling. Sponsored in part by the Advanced Research Projects Agency and the Atomic Energy Commission, Washington, D.C. Revision of report dated 8 Jul 70. Pub. in Health Physics, v21 p571-579 Oct 71.

Descriptors: (*Nuclear explosions, Safety), (*Public health, Nuclear explosions), Underground explosions, Radiological defense.
Identifiers: Sterling Operation.

The Bureau of Radiological Health, U.S. Public Health Service, provides comprehensive off-site radiological safety and medical programs for underground nuclear tests at the Nevada Test Site and for nuclear tests and experiments conducted at other geographical sites for non-weapons research and peaceful purposes. The specific physical requirements for these latter categories of use may preclude their being conducted at the Nevada Test Site. Future underground nuclear detonations for research and peaceful purposes may be held in locations which are not necessarily remote from relatively sizeable civilian populations. It is thus desirable to delineate the particular problems and their management involved in the public health medical planning for population safety, including such aspects as evacuation. These medical planning and management activities and their implementation for Project Sterling, a 350-ton yield underground nuclear detonation, which was conducted for seismic research purposes on 3 December 1966, in the Tatum Salt Dome near Hattiesburg, Mississippi, are described. PACIFIC NORTHWEST DRAINAGE BASINS: A COOPERATIVE STATE-FEDERAL REPORT ON WATER POLLUTION.
Water pollution series.
1951, 94P PHS-Pub-87, PHS-WPS-6
Prepared in cooperation with Idaho State Department of Public Health, Montana State Board of Health, Oregon State Sanitary Authority, Washington State Pollution Control Commission, and Wyoming State Department of Public Health.

Descriptors: (*Pacific Northwest, *Water pollution), (*Water resources, Pacific Northwest).

The report is on the Pacific Northwest Drainage Basins. It presents information about the ways our water resources are used, the pollution going into out water resources and the resulting damages, the benefits which may result from pollution prevention and abatement, the pollution prevention measures now in effect, and those required. In part one, the water pollution problems of the basins as a whole is considered. Part two presents briefly the data for each of the several subbasins of the major basins, including a list of projects now known to be needed for water pollution control.

UNDERGROUND COAL MINING METHODS TO ABATE WATER POLLUTION: A STATE OF THE ART LITERATURE REVIEW.
Water pollution control research series,
Larry W. Wilson, Noah J. Matthews, and James L. Stump. Dec 70, 50p EPA-14010-FKK-12/70
Paper copy available from GPO $0.60 as stock no. 5501-0094.

Descriptors: (*Water pollution, *Mine waters), (*Coal mines, Water pollution), Reviews.
Identifiers: *Mine acid drainage.

The report reviews published information concerning the abatement of harmful drainage from underground coal mines. Although much has been written on mine water management, very little literature is available on the specific area of preventing the formation of acid water. The references used in this report include mining engineering and hydrology studies and spans the period of time when water quantity rather than quality was the major consideration. Physical approaches to the problem of interdicting water entry into coal mines, beyond removal and treatment, are (a) land management for surface and sub-surface water diversion, (b) the exploitation of water carrying strata, and (c) new mining methods. Chemical approaches to abatement include (a) the use of silica gel solutions underground to prevent acid formation, (b) the use of inert gas in active mines and (c) the use of new and the refinement of known grouting agents. DETERMINATION OF DEOXYGENATION COEFFICIENTS, WILLAMETTE RIVER, SUMMER 1961.

1961, 26p Working Paper-17
Report on Columbia River Basin Project for Water Supply and Water Quality Management.

Descriptors: (*Willamette River, *Deoxygenation), (*Biochemical oxygen demand, Willamette River).
Identifiers: *Water quality data.

In determining the waste assimilative capacity of streams within the Willamette Basin, Oregon, one of the primary considerations was determination of the deoxygenation coefficients (ksub1) for critical locations within the basin. During the summer of 1961 river samples were collected and analyzed for the determination of ksub1. Nine sampling stations were selected within the basin, seven on the main stem Willamette and two on tributary streams. These stations were located from river mile 7, near the mouth, to river mile 178 at Eugene.

SAMPLE COLLECTION TECHNIQUES FOR COMBUSTION SOURCES--BENZOPYRENE DETERMINATION,
Robert L. Stenburg, Darryl J. von Lehmden, and Robert P. Hangdbrauck. 1961, 15p
Presented at the American Industrial Hygiene Association Annual Meeting, held in Detroit, Mich., on 13 Apr 61.

Descriptors: (*Pyrenes, *Gas sampling), (*Air pollution, Pyrenes).
Identifiers: *Benzopyrenes, *Air pollution detection.

The extent to which benzo (a)pyrene and other polynuclear hydrocarbons are emitted to the atmosphere from some of the more commonly occurring suspect sources is currently being evaluated in a source sampling study by the Public Health Service. A first step in this study was the development of a technique for collecting samples from high temperature combustion and process gas streams in a manner which would assure retention of the hydrocarbon materials of interest. This paper reports the findings of a series of tests conducted to develop suitable methods for cooling the gas samples, to establish temperature requirements for the collected sample during the sampling period, and to evaluate wet versus dry collection techniques. LIGHT-SCATTER INSTRUMENTATION FOR MEASUREMENT OF ATMOSPHERIC PARTICLES,
John S. Nader, Gordon C. Ortman, and Morgan T. Massey. 1960, 26p
Prepared in cooperation with North Carolina Univ., Raleigh. Presented at the American Industrial Hygiene Association Annual Meeting held at Rochester, N.Y. on 27 Apr 60.

Descriptors: (*Particles, *Photometers), (*Air pollution, Particles), Light scattering.
Identifiers: *Air pollution detection.

Atmospheric particulates consist of solid particles and liquid droplets ranging in size from millimicrons to tens of microns and varying shape from spherical fog droplets to porous and irregular soot particles. Particulates are considered pollutants inasmuch as they can reduce visibility, cause property damage, and produce toxic effects both in man and plant life. Instrumentation is necessary, to evaluate the contribution of man-made particulates to the air pollution problem, the nature of various particles and their correlation to specific effects, and the effectiveness os specific control measures. The report discusses the photoelectric measurement of light scattered by particulate. The method offers a sensitive method of analysis without some of the drawbacks of sample collection.

REPORT FOR CONSULTATION ON THE METROPOLITAN ATLANTA INTERSTATE AIR QUALITY CONTROL REGION (GEORGIA).

Jan 70, 72p APTD-1192

Descriptors: (*Georgia, *Air pollution).
Identifiers: *Atlanta (Georgia), *Air quality data.

The Clean Air Act as amended directs the Secretary of Health, Education, and Welfare to designate 'air quality control regions' to provide a basis for the adoption of regional air quality standards and the implementation of those standards. The Act stipulates that the designation of a region shall be preceded by consultation with appropriate State and local authorities. The report is intended to provide the basic background information needed for the consultation. In addition, on the basis of the information developed, the report proposes boundaries for the factors underlying the proposed boundaries. (Author)

STATEWIDE INVENTORY OF AIR POLLUTANT EMISSIONS STATE OF OHIO 1970 (REVISED).

14 Jan 72, 102p PEDCO-72-1 APTD-0756
Contract EPA-68-02-0044

Descriptors: (*Air pollution, *Ohio), Sources, Inventories, Tables (Data), Data acquisition, Particles, Sulfur dioxide, Carbon monoxide, Hydrocarbons, Nitrogen oxides, Combustion products, Exhaust gases, Coal, Natural gas, Fuel oil, Incinerators, Waste disposal, Evaporation, Solvents, Gasoline, Transportation, Electric power plants.
Identifiers: *Implementation Air Pollution Planning Program, Air Quality Control Regions, *Air quality data, Open burning, Automobile exhaust.

The results of an emissions inventory for the State of Ohio are presented. The purposes of the study were: (1) to determine the quantities of five air pollutants emitted in Ohio; (2) to calculate point and area source emission quantities; (3) locate sources on maps of gridded areas; (4) summarize and tabulate the results for use in developing an implementation plan for Ohio. The survey which included the entire State of Ohio concerned the following pollutants: particulates; sulfur oxides; nitrogen oxides; carbon monoxide; and hydrocarbons. Air pollution emissions were divided into eight source categories. The Universal Transverse Mercator System (UTM) was used as the reference system for grid delineation. (Author)

AIR POLLUTION IN GEORGIA...A COOPERATIVE STATE WIDE SURVEY,
Rudolph P. Lewis, Samuel B. McKee, Frank A. Bell, jr., and Horace S. Carter. Apr 62, 36p
Prepared in cooperation with Georgia Dept. of Public Health, Atlanta.

Descriptors: (*Air pollution, *Georgia), Surveys, Reviews, Project planning, Urban areas, Factor analysis, Policies, Cooperation, Legislation.

Emission of air pollutants has been increasing in Georgia from a variety of sources including automotive vehicles, burning refuse dumps, home and commercial heating plants and other sources, in addition to industrial sources. These increased emissions have resulted in a mounting number of air pollution problems. Therefore, a statewide survey was undertaken to provide a current assessment of air pollution in Georgia and to develop recommendations for necessary action.

CHEMICAL FLOCCULATION OF MICROORGANISMS IN BIOLOGICAL WASTE TREATMENT,
Mark W. Tenney, and Werner Stumm. Oct 65, 20p
Presented at the Annual Purdue Industrial Waste Conference (19th), held at Purdue Univ., Lafayette, Ind., on 5-7 May 64. Pub. in Jnl. of Water Pollution Control Federation, v37 n10 p1370-1388 Oct 65.

Descriptors: (*Sewage treatment, *Flocculating), Dissolved organic matter.

Chemical treatment of wastes, despite early interest in such methods, fell into disfavor as improved biological methods were developed. Biological treatment is far superior to chemical treatment for the removal of soluble organic matter. However, in recent years there has been a revived interest in special applications of chemical methods, especially for processing biologically treated effluents when additional purification is needed. This research was undertaken to investigate to what extent chemical flocculation methods can complement, and partially substitute for, the biological treatment process.

REFUSE COLLECTION AND DISPOSAL FOR THE SMALL COMMUNITY,
William A. Xanten, and Ralph J. Van Derwerker. Nov 53, 46p
Prepared in cooperation with the American Public Works Association, Chicago, Ill.

Descriptors: (*Communities, Waste disposal), (*Waste disposal, Planning).
Identifiers: *Solid waste disposal.

Surveys have shown that many small communities do not follow sanitary refuse practices. There are many reasons why these communities have not taken steps to protect the health and welfare of their citizens. Predominant among the basic causes, however, is the belief that adequate service is too expensive, and a lack of information on how to establish and operate a satisfactory system. It has been clearly demonstrated many times, that urban fly control and rodent control must be based upon adequate storage, collection, and disposal of community wastes. A practical refuse control program is within the means of any community. This publication proposes to describe certain factors which needs to be considered in establishing sanitary refuse practices, and to present representative operational and cost data in such manner that they may be interpreted to meet local conditions.

REPORT ON WATER POLLUTION CONTROL, SANTA ANA RIVER BASIN, CALIFORNIA DRAINAGE BASIN.

1 Mar 51, 124p PHS-Pub-18

Descriptors: (*Water pollution, *Santa Ana River Basin), (*California, Water pollution).
Identifiers: *Water quality data, Riverside County (California), San Bernardino County (California), Orange County (California).

The Basin contains 46 sewered communities with a connected population of approximately 337,000 discharging wastes to the ocean, land disposal systems, dry watercourses, or to surface streams. Known industrial wastes with a population equivalent of 360,000, discharged to the Orange County Joint Outfall Sewer, increase this total to 697,000. Community waste treatment facilities serving the 46 sewered communities reduce the population equivalent of the combined domestic and industrial wastes from 697,000 to approximately 360,000. Of this total, 324,000 is discharged to tidal waters or directly to the ocean and 28,000 is discharged to land.

EFFECTS OF THE 1956 STEEL STRIKE ON AIR POLLUTION LEVELS IN SEVERAL COMMUNITIES,
Elbert C. Tabor, and James E. Meeker. 1958, 30p
Presented at the Annual Meeting of the Air Pollution Control Association held in Philadelphia, Pa., on 26-29 May 58.

Descriptors: (*Iron and steel industry, Air pollution), (*Air pollution, *Industrial wastes), Strikes.
Identifiers: *Baseline measurements, *Air quality data, *Homestead (Pennsylvania), *Pittsburgh

(Pennsylvania), *Birmingham (Alabama), *Donora (Pennsylvania), *East Chicago (Illinois), *McKeesport (Pennsylvania).

The paper reports the results of a study conducted in several steel producing communities during and immediately following the steel strike of July, 1956. Since the decision to undertake this study was made the day after the strike started, measurement of pollutant levels under normal operating conditions had to be made after the strike was settled and the plants were once again operating at full capacity. With only a short time available to prepare for the sampling program, the study was limited to the following communities: Homestead, McKeesport, Pittsburgh, and Donora, Pa.; East Chicago, Ind.; and Birmingham, Ala. VALENCE ISOMERIZATION OF DIHYDROPYRIDINES.
Terminal progress rept. 1 Jan 65-31 Aug 67,
Elliot N. Marvell. 31 Aug 67, 28p
Grant PHS-WP-0079

Descriptors: (*Pyridines, *Cyclization), Organic salts.
Identifiers: *Pyridinium compounds.

An investigation of the mechanism of the formation of phenylpyridinium ion from Konig's salt has been carried out. The rate of ring closure in methanol solution was increased by added base. An increase of base concentration increased the rate only up to the point at which the base concentration was equivalent to the salt concentration. The effect was independent of the nature of the base. A mechanism was postulated involving a rate determining valence isomerization of the free base derived from Konig's salt to a dihydropyridine. Similar results were shown to pertain with substituted Konig's salts. Rates were measured for methyl, methoxyl, chloride and fluorine containing salts. As a part of the mechanism a folding and unfolding process for the triene chain of the salt was proposed.

CATIONIC POLYMERS AS FLOCCULANT AIDE IN WATER PURIFICATION.
Terminal progress rept.,
H. Linford, R. Fyfe, W. Hilborn, and S. Lausangngam. 1968, 122p
Grant PHS-WP00240-06

Descriptors: (*Water treatment, *Flocculating), (*Silicon dioxide, *Flocculants), (*Zeta potential, Flocculating), Inorganic polymers.

According to some investigators, the flocculation mechanism is based on action of chemical bonding forces. Little emphasis has been placed on the possibility that the flocculant might alter the make-up of the double layer thereby reducing electrostatic repulsive forces between particles and flocs. Behavior of the calculated electrokinetic or 'Zeta' potential reflects change in the stability of a suspension. Flocculation behavior can therefore be correlated with a Zeta potential. One means of estimating the Zeta potential is from microelectrophoresis measurements. The report shows that, by measuring the floc bed depth and total electrical resistance of the streaming potential cell, as well as the streaming potential and its corresponding pressure difference driving force, a control factor, valid over the potable water range, can be calculated for each flocculation system investigated. THE FATE OF ABS IN SOILS AND PLANTS,
Stephen A. Klein, David I. Jenkins, and P. H. McGauhey. Oct 62, 53p

Descriptors: (*Irrigations, *Sewage disposal), (*Water pollution, *Detergents), (*Surfactants, Plant growth), (*Benzenesulfonic acids, *Plant growth), Plant physiology.
Identifiers: *Sewage irrigation, Liquid waste disposal, *Water pollution effects (Plants).

Two species of plants (sunflowers and barley) were grown in water culture at ABS concentrations of 0, 10, and 40 mg/1, and three species (sunflower, barley, and Lupinus albus) in soil at ABS concentrations up to 50 mg/1 to determine the effect of ABS on plant growth and the uptake of ABS by plants. The major findings of these experiments were that although ABS caused severe growth inhibition in water culture studies (about 70 percent at 10-mg/1 ABS and almost 100 per cent at 40-mg/1), only one species (sunflower) of the three species grown in soil was adversely affected. Furthermore, plants irrigated with sewage containing from 4.6- to 12.7-mg/1 ABS far surpassed in growth those irrigated with water, regardless of soil fertilization practices or the addition of up to 15-mg/1 ABS to sewage. It may be concluded, therefore, that irrigation with sewage is beneficial to plants in spite of the presence of ABS in any amount likely to occur in sewage at the present time. (Author)

USE OF CHEMICAL ADDITIVES TO IMPROVE AERATION RATES. STUDY OF MODELS OF AIR DISPERSERS.
Progress rept. no. 3b,
Stefan A. Zieminski, and Richard R. Lessard.
1967, 32p R-848-4
FWPCA-WP-00562-04

Descriptors: (*Aerators, Improvement), Additives.

The investigation presented in the report deals with a method for improving the rates of aeration. In order to achieve this objective, small quantities of some organic substances were introduced in the zone of bubble formation. These additives decreased bubble coalescence and improved the rate of transfer because of the substantial increase in the interfacial surface area. The tests were conducted with n-octanol, 4-methyl-2-pentanol and heptanoic acid. At a concentration of 1 ppm the n-octanol and 4-methyl-2-pentanol showed an improvement in the rate of aeration of 70 per cent over that in pure water. At a concentration of only 0.5 ppm n-octanol gave an improvement in the rate of transfer of 30 per cent. Since the design of the aerator and the agent were not optimized, it may be expected that still better effect could be obtained in a large scale installation. (Author)

BACTERIAL ACCUMULATION BY THE OYSTER, CRASSOSTREA VIRGINICA, ON THE GULF COAST,
Technical rept.,
C. B. Kelly, W. Arciaz, M. W. Presnell, and E. K. Harris. 1960, 49p SEC-TR-F60-4

Descriptors: (*Food contamination, Oysters), (*Oysters, *Bacteria), (*Shellfish, Bacteria), (*Water pollution, Shellfish), Sea water, Temperature, Chlorination, Ultraviolet radiation, Decontamination, Food sanitation, Florida, Accumulation.
Identifiers: Crassostrea virginica, *Water pollution effects (Animals).

A series of laboratory experiments were conducted at Pensacola, Florida to determine the rate of accumulation of bacteria by the eastern oyster, Crassostrea virginica. These studies involved the determination of the coliform level attained by oysters in laboratory flats furnished flowing sea water artificially polluted by the continuous addition of suspensions of coliform organisms. The tests were conducted simultaneously at two levels of bacterial density of the water, which correspond to the coliform MPN limits set for moderately polluted and approved shellfish growing areas. A third flat, furnished with coliform-free sea water, was included as a control.

PHENOL IN RELATIONSHIP TO TASTE AND ODOR PROBLEMS,
M. B. Ettinger. 1958, 11p

Descriptors: (*Water pollution, Taste), (*Odors, Water pollution), (*Phenols, Water pollution), (*Water supply, *Taste).

The report considers the taste and odor of water used in the home. It should be acceptable to at least 95 per cent of the using population, regardless of whether the water is newly pumped from the treatment plant or has been hung up in a reservoir en route. The effects of phenols in this problem are discussed.

RADIOACTIVE FALLOUT, WATER SUPPLY, AND AGRICULTURE,
Conrad P. Straub. 22 Sep 59, 20p
Presented at the Water for Texas Conference Held at Texas A and M College, College Station, Tex. 10 Sep, 1959.

Descriptors: (*Radioactive contaminants, *Environmental surveys), (*Fallout, Environmental surveys), Radiobiology, Water pollution.

Radioactive fallout represents nuclear debris deposited on the ground from the atmosphere. Although most fallout originates from tests of nuclear weapons, some may also arise from specific nuclear operations. Depending on the method of deposition, fallout is characterized as dustout--deposition of dry solids; rainout--carried by rainfall; or snowout--deposited by snowfall. The report disucsses the effects of fallout on water, plants and soils.

PRESSURE-BROADENING EFFECTS ON INFRARED PEAK INTENSITIES OF HYDROCARBONS,
A. P. Altshuller, and A. F. Wartburg. 1957, 15p

Descriptors: (*Hydrocarbons, *Infrared spectra), (*Gas analysis, Hydrocarbons).
Identifiers: *Line broadening.

The pressure-broadening effects of one atmosphere of air or of carbon dioxide on various infrared bonds of hydrocarbons have been measured and compared with the intensity data obtained without pressure-broadening. Measurements have been made on the following hydrocarbons at partial pressures between 0.5 and 20 millimeters and at the following wavelengths: ethylene, 10.52 microns; acetylene, 3.1, 7.4 and 13.7 microns; propylene, 10.95 microns; butene-1, 10.85 microns; trans-2-butene, 10.375 microns; and benzene, 9.50 microns. The variation of optical absorbance at several of the infrared absorption maxima of ethylene and acetylene have been investigated using varying partial pressures of air or carbon dioxide at fixed partial pressures of the two hydrocarbons. WATER POLLUTION CONTROL POLICY,
Paul D. Haney. 1953, 23p
Presented at the Miami Beach Meeting of the American Society of Civil Engineers, 16-19 Jun 53.

Descriptors: (*Government policies, *Water pollution).

Historically, water pollution control has been associated with the protection of public health, and now there is a definite trend in the direction of considering the effects of pollution on all water uses. Certain policies have been defined in the Water Pollution Control Act of 1948, others are implied, and others have been developed by the Public Health Service as required for program operation. Major policies in connection with the national water pollution control program are discussed. (Author)

REPORT FOR CONSULTATION ON THE METROPOLITAN SIOUX FALLS INTERSTATE AIR QUALITY CONTROL REGION (SOUTH DAKOTA-IOWA-MINNESOTA).

Jul 70, 63p APTD-1196

Descriptors: (*South Dakota, *Air pollution), (*Iowa, Air pollution), (*Minnesota, Air pollution).
Identifiers: *Sioux Falls (South Dakota), *Air quality data.

The basic background information is presented for the consultation with state and local authorities prior to the designation of air quality control regions as stipulated in the Clean Air Act. Boundaries for the regions are proposed and the factors which are the basis for the proposed boundaries are discussed. Reports for consultation consider these factors: geography; population and economic activity; their prospective growth; probable direction of physical growth; the emission inventory and the location of sources; air quality and pollution transport analysis; regional planning; air pollution control; and governmental jurisdictions. EVALUATION OF AIR POLLUTION IN THE STATE OF WASHINGTON.
Rept. for 1 Jul-30 Nov 56,
E. R. Hendrickson, D. M. Keagy, and R. L. Stockman. Dec 56, 175p
Prepared in cooperation with the State of Washington Department of Health.

Descriptors: (*Washington (State), *Air pollution).
Identifiers: *Air quality data.

The scope of the study was to assess the present and potential state problem and to delineate specific problem areas, present and future, through a study of population distribution and trends, geography and topography, meteorology and climatology, and existing and potential sources of pollution. In addition, a determination was made of available resources in the State for research and investigation in air pollution problems. The sources of pollution which are considered include transportation, domestic activities, agricultural practices, industrial activities, refuse disposal, out-of-state sources, and natural sources. SANTA MARGARITA PROJECT. WATER QUALITY CONTROL STUDY.

Mar 68, 37p
Report on Santa Margarita River Basin California.

Descriptors: (*Santa Margarita River Basin, *Water pollution), (*California, Water pollution).

The Santa Margarita Project in Southern California will develop approximately between 11,000 and 12,000 acre-feet of water annually for military, agricultural, industrial, and municipal uses. Because the downstream beneficial uses will be few, flow regulation for water quality control will not be needed below the project reservoirs. Nutrient-rich waste flows entering the project reservoirs from upstream developments are predicted to have a significant adverse impact on the quality of the impounded waters. The most feasible plan to alleviate this problem requires transport of wastes from the Upper Basin to areas below the two proposed reservoirs. A water quality management program for the entire basin is essential to the success of this project and to the ultimate development of the basin's water resources. (Author)

REPORT FOR CONSULTATION ON THE METROPOLITAN MIAMI INTRASTATE AIR QUALITY CONTROL REGION (FLORIDA).
Mar 70, 59p APTD-1189

Descriptors: (*Florida, *Air pollution).
Identifiers: *Miami (Florida), Broward County (Florida), Dade County (Florida), Palm Beach County (Florida), *Air quality data.

The Clean Air Act, as amended, directs the Secretary of Health, Education, and Welfare to designate 'air quality control regions' to provide a basis for the adoption of regional ambient air quality standards and the implementation of those standards. The Act stipulates that the designation of a region shall be preceded by consultation with appropriate State and local authorities. This report is intended to provide background information for a formal Consultation. It proposes boundaries for the Metropolitan Miami Intrastate Air Quality Control Region and discusses the factors which are the basis of the boundary proposal. (Author)

A WATER QUALITY SURVEY OF HAMPTON ROADS SHELLFISH AREAS,
Russell S. Smith. 1952, 18p
Presented at the Convention of The Oyster Institute of North America, Atlantic City, N. J., August 12-14, 1952.

Descriptors: (*Virginia, Water pollution), (*Hampton Roads, *Water pollution), (*Shellfish, Water pollution), (*Seafood, Water pollution), Public health, Food contamination, Water quality, Harbors, Atlantic Ocean.
Identifiers: *Water pollution effects (Animals).

The shallow water areas in and near Hampton Roads have always been one of the most important oyster growing sections of the country. The Roads are also one of the finest natural harbors on the Atlantic Coast. With the development of shipping in the area, the port cities of Norfolk, Portsmouth and Newport News grew and developed and, in accordance with customs of the times, discharged their sewage into the nearest body of water. The waters of the Hampton Roads area present an excellent example of the effect of sewage pollution on shellfish growing waters and the improvement possible by means of sewage treatment. As the pollution increased, the use of this great natural resource had to be subjected to ever-increasing restrictions. Finally, with collection and treatment of sewage, the quality of the waters has so improved that the restriction imposed could be removed over much of the area.

A PRELIMINARY ANALYSIS OF WATER POLLUTION SURVEILLANCE SYSTEM PLANKTON DATA FOR THE NORTHWEST REGION.

Feb 69, 32p Working Paper-63

Descriptors: (*Pacific Northwest, Water Pollution), (*Plankton, Pacific Northwest), Water quality, Data, Surveys, Indicator species.

The purpose of this paper is to present a preliminary evaluation of plankton data collected in the Pacific Northwest Region and to make recommendations regarding the advisability of continuing this data collection for pollution surveillance purposes. Under the proper conditions, plankton data can be a useful parameter in itself; however, its present role is to lend support to chemical and physical data. These plankton data have provided almost ten years of 'badeline' data at certain points in the Northwest Region. At a later date, if needed, these data could prove to be of historic value if and when a comparison needed to be made between two periods of time to determine water quality changes.

THE SULFAMIC ACID MODIFICATION OF THE WINKLER METHOD FOR DISSOLVED OXYGEN,
Stuart Cohen, and C. C. Ruchhoft. 1941, 15p

Descriptors: (*Dissolved gases, *Water analysis), Oxygen, Nitrites, Errors, Sulfamic acids.
Identifiers: *Winkler analysis, *Water pollution detection.

A modified Winkler procedure employing a solution of 4 percent sulfamic acid in 20 percent sulfuric acid as a preliminary treatment for the removal of nitrites in the dissolved oxygen determination has been presented. It has been shown that this procedure is as satisfactory as the azide modification for the determination of dissolved oxygen and biochemical oxygen demand in sewage treatment and river pollution studies. The two modifications, azide and sulfamic acid, were compared and appear to have equal value in the prevention of biochmeical oxidation when it is necessary to store a dissolved oxygen sample for a short time. (Author)

PB-215 052
Advisory Boards to the International Joint Commission on Control of Pollution of Boundary Waters.
INTERNATIONAL JOINT COMMISSION--UNITED STATES AND CANADA.

Apr 57, 22p

Descriptors: (*Great Lakes Region, *Water pollution).

The report is the Eleventh Progress Report to the International Joint Commission prepared by the Advisory Boards on Control of Pollution of Boundary Waters under reference in the Great Lakes Region. Emphasis is being placed on control and monitoring of industrial waste systems with the objective of preventing 'spills' and minimizing irregularities in operation. The programs established for investigating possible future fish kills and for warning water plant operators should keep those handling pollutional materials on the alert. Significant progress has been made by industry in providing waste treatment facilities, and treatment for all domestic sewage should soon be a reality.

WATER USES AND WATER QUALITY INTERFERENCES WITH WATER USES. SNAKE RIVER BASIN.
Sep 66, 45p Working Paper-60
Report on Columbia River Basin Project for Water Supply and Water Quality Management.

Descriptors: (*Snake River Basin, *Water quality), (*Water pollution, Snake River Basin), Fisheries, Wildlife.

This natural resource use study of the Snake River Basin was conducted in conjunction with a water quality investigation from August 22-28, 1966. The primary objective was to determine non-documented major water uses--at preselected locations--and to grosaly assess the suitability of the water environment to serve such uses. In general, terms such as 'high' (aesthetic value), 'heavy' (fisherman use), 'moderate,' 'light,' 'nil' or 'non-existent,' are used to delineate the degree of intensity of a use or of its quality.

SEQUENTIAL USE WITHIN A HYDROLOGIC COMPLEX.
Annual progress rept. no. 1, 1 Dec 65-31 Mar 67,
David W. Hendricks. 15 Mar 67, 20p
Grant WPD-17-01-66

Descriptors: (*Hydrology, Mathematical models).

The primary objective of the first year of operation of the project was to delineate the system in terms of model building requirements for a hydrologic-quality model. As implied by this objective, it was necessary to define the hydrologic and water quality characteristics of the system. This was done: (1) by collecting and collating previous data and reports, and (2) by implementing a data collection program to augment previous work. The secondary activity of the first year was in formulating plans for the model building phase of the project. These aspects are briefly discussed.

EVALUATION OF DETERGENTS. V. A STUDY OF WASHING PERFORMANCE OF SOME SURFACE ACTIVE MATERIALS AND COMBINED DETERGENT-SANITIZERS,
Francis I. Norris, and C. C. Ruchhoft. 17 Apr 50, 13p
Presented at National Meeting of the American Chemical Society (117th), Detroit, Mich. 17-19 Apr 50.

Descriptors: (*Detergents, Performance evaluation), (*Quaternary ammonium salts, Detergents).

Previous studies indicated that in general surface active materials improved the washing performance of alkaline detergents even though the same surface active agents were poor detergents. However, certain mixtures of alkaline and surface active materials showed poor washing performance even though they were found to have physical and chemical characteristics resembling those of excellent detergents. In view of the interest in surface active materials and detergent-sanitizers and the paucity of reliable information that would indicate what might be expected of them for dishwashing, a performance test study was made using a technique that has been described in earlier papers. A study was also made on the effect of the quaternary ammonium compounds on the washing performance of alkaline detergents by this procedure. (Author)

THE ROLE OF MATHEMATICAL MODELS IN THE POTOMAC RIVER BASIN WATER QUALITY MANAGEMENT PROGRAM.

Dec 67, 14p
Presented at an Interdepartmental Conference Convened at the Request of Assistant Secretary, Kenneth Holum, 13 Dec 67.

Descriptors: (*Potomac River, *Water pollution), Mathematical models.

Water quality investigations in the Potomac River Basin have been conducted for the past several years by the Chesapeake Field Station as part of the Chesapeake Bay-Susquehanna River Basins Project. As an integral part of the project, large mathematical simulation models were developed. The models, after verification, are being applied to this river basin as well as others in the Chesapeake Bay drainage system. The general relationship of these models to management of Potomac water quality is shown. (Author)

EQUALIZATION OF LIQUID WASTES.
Final progress rept.,
Ivan Metzger. 1965, 49p
PHS-WP-41

Descriptors: (*Sewage treatment, *Flow control).
Identifiers: *Sewage flow rate.

The operation of waste treatment plants is often complicated by an intermittent flow of toxic materials, known as shock loads, usually from industrial sources. These shock loads, containing high concentrations of pollutants, may upset biological activity, fail to be adequately treated, or disrupt treatment programs. Intermittent dischages may cause such wide fluctuations in concentrations at the plant that adequate treatment may not be obtained. The solution usually involves some type of holding tank,in which an attempt is made to reduce the extremes of concentration. The report describes an ideal equalization tank defined as one which would, following a shock load, produce a uniform effluent concentration. Since the mean of the effluent tracer pattern represents the theoretical detection time, the effluent pattern sought is horizontal for twice the theoretical detention time. It is shown that a triangular shape of constant depth with continuous discharge would produce ideal equalization. (Author)

'UNIVERSAL' AIR POLLUTANT ANALYZER,
D. F. Adams, H. J. Dana, and R. K. Koppe. 4 Sep 57, 41p
Prepared in cooperation with Washington State Inst. of Tech., Pullman.

Descriptors: (*Air pollution, *Monitors), (*Hydrogen fluoride, *Gas analysis), (*Sulfur dioxide, *Gas analysis).
Identifiers: *Air pollution sampling, *Air pollution detection.

Two prototype automatic atmospheric pollutant analyzers suitable for producing dosimeter or continuously integrated records have been designed and constructed. The Zirconium-Eriochrome Cyanine R reagent for fluoride and the Starch-Iodine Blue reagent for sulfur dioxide have been modified for use in the analyzers. The reduced stability of these reagents under continuous air aeration for periods exceeding 4-12 hours limits the pollutant concentration which may be accumulated by a single reagent charge. This appears, however, to be desirable from the viewpoint of field application. Simultaneous comparisons were made between the Thomas Autometer, Titrilog and the Dosimeter for sulfur dioxide and an automatic scrubbing soulution collector and the Dosimeter for hydrogen fluoride.

PROGRESS REPORT OF TASTE AND ODOR STUDY BEING CONDUCTED AT THE ENVIRONMENTAL HEALTH CENTER, CINCINNATI, OHIO,
Harry Braus, Graham Walton, and F. M. Middleton. 1965, 4p

Descriptors: (*Water pollution, Taste), (*Water supply, *Taste), (*Odors, Water supply), (*Ohio River, Water pollution).

Extensive abnormal tastes and odors have occurred during the past several years in many public water supplies using the Ohio River and its tributaries as sources of water. A visit to a number of the water plants from Pittsburgh to Cincinnati in December 1948 confirmed that most water plants in this section experienced pronounced taste and odor problems in October and November of 1948. The periodic recurrence of objectionable tastes and odors in these waters has caused much concern to consumers and to water works and health officials. Early in 1949 a study of this problem was instituted by the staff of the Environmental Health Center at Cincinnati, Ohio. This progress report is presented as a matter of information concerning the findings of the study to September 1949 which may be of interest to those concerned with taste and odor problems.

AIR POLLUTION EFFECTS OF INCINERATOR FIRING PRACTICES AND COMBUSTION AIR DISTRIBUTION,
Andrew H. Rose, Jr., Robert L. Stenburg, Morton Corn, Ronald R. Horsley, and Daniel R. Allen.
1965, 40p

Descriptors: (*Incinerators, Design criteria), (*Air pollution, *Combustion products), (*Waste disposal, Incinerators).
Identifiers: *Air pollution abatement, *Solid waste disposal.

A study is under way to determine the relationships between incinerator design criteria and resulting atmospheric contaminant discharges. Tests are made by burning a fuel of constant composition in a prototype multiple chamber incinerator under controlled conditions. Effects of variables are measured by analyzing the flue gases for solids, hydrocarbons, oxides of nitrogen and carbon monoxide. The series of tests herein reported was made to (1) provide information on the relative importance of such variables as stoking and amount of fuel per charge insofar as they affect the production of atmospheric pollutants, and (2) evaluate the chosen levels of variables such as excess combustion air, underfire and secondary air distribution, and fuel charging rate.

PLYWOOD PLANT GLUE WASTES DISPOSAL.
Final rept.,
Danforth G. Bodien. Jan 69, 90p FR-5
See also PB-215 128.

Descriptors: (*Plywood, Industrial wastes), (*Glue, *Industrial waste treatment), (*Water pollution, Glue), (*Industrial wastes, Glue), Phenol formaldehyde resins, Urea formaldehyde resins.
Identifiers: *Wood processing industry, *Water pollution control.

The cleanup of glue spreaders at plywood mills produces a waste that is high in pollutional strength, though quite low in volume. The plywood industry uses three basic types of glue: the blood-soya, or protein variety, for interior grade plywood; the phenolic formaldehyde variety used primarily for exterior grade plywood; and a urea formaldehyde glue used for hardwood paneling. The study was carried out to determine the magnitude and extent of the problem created by the disposal of glue wastes, review the characteristics of plywood glue wastes, and recommend methods of treatment for these wastes. The study area includes the States of Oregon, Washington, Montana, Idaho, and California.

THE DETERMINATION OF DISSOLVED OXYGEN BY THE RIDEAL STEWART AND ALSTERBERG MODIFICATIONS OF THE WINKLER METHOD,
C. C. Ruchhoft, W. Allan Moore, and O. R. Placak. 1965, 11p

Descriptors: (*Water pollution, Water analysis), (*Water analysis, *Dissolved gases), (*Oxygen, Water analysis).
Identifiers: *Water pollution detection, *Winkler analysis.

Among the many modifications of the Winkler method advocated for the determination of dissolved oxygen in the presence of nitrite, probably the most widely used is the Rideal-Stewart method. It has been recognized for some time,

however, that in the presence of organic matter this modification gives low results. Noll proposed the use of urea for the destruction of nitrites but its use requires a long period of contact (approximately twenty-four hours) and is, therefore, impracticable. Alsterberg substituted sodium azide for urea and found that the destruction of nitrite could be accomplished in a few minutes. The report presents a comparative study of the sodium azide and Rideal Stewart modifications during the course of a survey of the Scioto River.

MUNICIPAL INCINERATOR DESIGN. A SURVEY OF ENGINEERING PRACTICE.

1965, 28p
Sponsored in part by Public Health Service, Washington, D.C.

Descriptors: (*Incinerators, Design), (*Waste disposal, Incinerators).
Identifiers: *Solid waste disposal, *Air pollution abatement.

Sanitary solid waste disposal is basic to community sanitation. Incineration is a method of solid waste disposal which is particularly applicable to cities and metropolitan areas where available land for sanitary landfilling is depleted or not available. With the trend toward expanding urban areas and metropolitan complexes, incineration may well play an increasingly important part in solving community solid waste disposal problems. Thus this study was undertaken to collect data on current engineering practice in this field to permit better evaluation of engineering and related needs.

Descriptors: (*Sewage treatment, *Military operations).

The report presents results obtained from investigations of the nature and methods for water purification used in Germany during and following the second world war.

PB-215 104
Federal Water Pollution Control Administration, San Francisco, Calif. Southwest Region.
MAD RIVER BASIN CALIFORNIA. BUTLER VALLEY PROJECT. WATER SUPPLY AND WATER QUALITY CONTROL STUDY.
May 67, 45p
Sponsored in part by Corp of Engineers, San Francisco, Calif.

Descriptors: (*Mad River basin, *Water pollution), (*Water supply, Mad River basin), (*California, Water supply).
Identifiers: *Humbolt County (California), *Trinity County (California).

A study was made which discloses that municipal and industrial water supply needs in the Mad River Basin, the Eureka Plain and the adjacent communities will increase from 81,000 acre-feet in 1970 to 244,000 acre-feet/year by 2070. The benefits of providing for water needs above the capacity of existing water supplies total $18,000,000 and have a present annual equivalent value of $680,000 per year including operation and maintenance costs. Minimum stream flows required for the existing fishery will be adequate to maintain water quality in the Mad River and therefore, storage in the proposed reservoir for stream flow regulation for water quality control is not required. TREATMENT AND DISPOSAL OF ATOMIC ENERGY WASTE CONTAINING RADIOACTIVE ISOTOPES,
C. C. Ruchhoft, Arthur E. Gorman, and C. W. Christenson. 7 Sep 51, 19p
Presented at the Symposium on Liquid Industrial Wastes, American Chemical Society Diamond Jubilee Meeting, New York. 7 Sep 1951.

Descriptors: (*Radioactive waste processing, *Reviews).
In sharp contrast with wastes of other industries, radioactive wastes may not be objectionable as measured by such common characteristics as odors, tastes and biochemical oxygen demand, yet they may be most dangerous because of levels of radioactive energy and long periods of activity. Furthermore, their cumulative effects on living organisms are not too well understood. The intricate and carefully controlled processing of radioisotopes and their manyfold uses in production and research ultimately lead to radioactive wastes in solid, liquid and gaseous forms; and treatment of a waste for decontamination in one form may result in radioactive wastes in another. The report discusses the treatment and disposal of these wastes.

THE USE OF VEGETABLE CULTURES AS THE PHOTOSYNTHETIC COMPONENT OF ISOLATED ECOLOGICAL CYCLES FOR SPACE TRAVEL,
Linvil G. Rich, William Marcus Ingram, and Bernard B. Berger. Jan 60, 19p
Presented at National Annual Meeting, American Astronautical Society (6th), New York City, N. Y., 18-21 Jan 60. (Preprint No. 60-25).

Descriptors: (*Photosynthesis, *Closed ecological systems), (*Space flight, *Food supply), (*Bioastronautics, Photosynthesis), Human ecology, Survival in space, Plants (Botany), Food, Cycles, Energy, Algae.

Although dehydrated foods and tanked water and oxygen will suffice for space flights of relatively short duration, long-term operations will be possible only if these necessities can be derived from the environment within the space vehicle. Conservation of environmental mass will make mandatory some type of closed ecological system kept in operation by a source of continuous energy. Conceivably, such a system will involve a carbon-dioxide exchange between humans and plants, waste reutilization, and the growth of plants for human consumption. Several sustenance systems have been proposed. In each case, attention was centered on the use of algae as the photosynthetic component of the closed cycle. Algae has been used as a dietary supplement, but no instance has been reported where the diet of man, or any other terrestrial mammal, has consisted entirely of algae. In contrast, higher plants have long been a primary source of human food material. Thus the study reports the use of higher plants as the photosynthate in the human sustenance system.

EPIDEMIOLOGICAL STUDIES,
Ralph E. Wheeler, William E. Burns, and Frank P. McEnteer. 1942, 99p
Supplement E to Final Report to the Ohio River Committee, Ohio River Pollution Survey.

Descriptors: (*Water pollution, *Infectious diseases), (*Bacterial diseases, Water pollution), (*Epidemiology, Bacterial diseases), Water supply, Contamination, Bacteria, Public health, Ohio, Rivers, Watersheds.

Field studies of water-borne disease on the Ohio River watershed were made during the Ohio River Pollution Survey, 1939-1940. These studies covered field epidemiological investigation of outbreaks of apparently waterborne disease; field bacteriological studies of these outbreaks; laboratory experimental studies, not definitely connected with outbreaks of disease, and statistical study of mortality from diarrheal and enteric diseases throughout the watershed. RADIOCHEMICAL ANALYSES FOR PREOPERATIONAL SURVEILLANCE,
A. S. Goldin, and Conrad P. Straub. 1958, 11p
Presented at the Annual Conference on Analytical Chemistry in Reactor Technology (2nd) Held in Gatlinburg, Tenn., 1 Oct 58.

Descriptors: (*Radioactivity, Sampling).
Identifiers: *Baseline measurement.

In the present state of the art in nuclear operations, environmental monitoring is as fundamental as film badges, neutrons, or uranium. Presumably there will come a time when one is sufficiently confident of the ability to design a reactor, a chemical processing plant, or other nuclear facility, that the question of environmental contamination will never arise; that time has not yet come. Preoperational monitoring to date has chiefly consisted of measurements of gross activity; it is the purpose of the paper to show the usefulness of analysis for specific nuclides in this type of measurement. A LABORATORY STUDY OF THE TREATMENT OF ALPHA TNT WASTES WITH IRON FILINGS,
F. Y. Norris, C. C. Ruchoft, and S. Megregian. 11 Mar 46, 9p

Descriptors: (*Trinitrotoluene, *Industrial waste treatment), (*Nitro compounds, Industrial waste treatment), Explosive materials, Iron.
Identifiers: *Water pollution control.

Experiments were performed to determime the practicability of removing alpha TNT from water by using iron filings. In preliminary experiments, it was observed that alpha TNT was completely removed from solution by a one inch diameter filter with a twelve inch depth of iron filings. Quantitative experiments indicated that an average dose of 320 ml. per day of waste can be treated by 398 g. of iron filings for 65 days before the filtrate shows the presence of TNT, and a total of 5.453 g. of TNT can be removed before it becomes necessary to replace the iron. Short time filterations will remove about nine times the average daily rate indicated. (Author)

RESEARCH IN THE RADIOACTIVE CONTAMINATION OF THE ENVIRONMENT,
Conrad P. Straub. 1959, 27p

Descriptors: (*Radioactive contaminants, *Environmental surveys), Fallout.

In the paper, the studies under way at the Robert A. aft Sanitary Engineering Center, Cincinnati, to define the levels of radioactive contamination in environmental samples, are described. Currently, measurements of gross activity are being made along with a few measurements of the more hazardous radionuclides. In addition, some other nuclides are identified. The levels of activity in air (from fallout and natural radioactivity), in rainfall, snow, cistern and surface water, and in milk and other food materials, are indicated. The contribution of these sources to the strontium-90 intake has been estimated and areas in which additional studies must be carried out delineated. (Author)

SEDIMENT PRODUCTION RATING, YAKIMA BASIN, WASHINGTON.
Jan 62, 10p Working Paper-11
Report on Columbia River Basin Project for Water Supply and Water Quality Management.

Descriptors: (*Yakima River Basin, *Sediment transport), (*Columbia River Basin, *Water pollution), (*Washington State, Water pollution).

The report describes a survey of the sediment load on the Yakima Basin east of the Cascades in Washington. The several reservoirs in the mountain areas trap much of the sediment coming from lands given a 'high' sediment production rating at the upper elevations. Sediment movement across flat valley lands below 'high' rated slopes and ridges in the lower watershed appears quite limited. Along the middle and lower reaches of the Yakima River, the bulk of the sediment load most probably comes from bankcutting and reworking of channel deposits at times of high flow, and from irrigation return flows during the summer season.

WASTEWATER DENITRIFICATION: COMBINED WITH CARBON ADSORPTION OR CONDUCTED IN SAND MEDIA,
John N. English, Jay B. Pitkin, Charles W. Carry, and Arthur N. Masse. 1970, 42p
Presented at the Annual Water Pollution Control Federation Conference (43rd), Boston, Mass. Oct 1970.

Descriptors: (*Sewage treatment, Nitrogen), (*Chemical removal (Sewage treatment), *Nitrogen), (*Activated carbon treatment, Nitrogen), Nutrients.
Identifiers: *Denitrification, *Tertiary sewage treatment.

The evaluation of columnar denitrification was initiated on a small scale with the intention of applying gained information to additional denitrification studies in the 0.3 mgd (1,140 cu m/day) four-stage carbon tertiary sewage pilot plant. Since denitrification is, by itself, of significant importance, its use is not confined to carbon column operation and would be applicable to column design using media other than carbon to provide surface area. Many applications exist for denitrification that do not require the reduction of dissolved organic material to very low levels. For this reason, a parallel study using 2 in. (5.1 cm) columns was conducted to compare the nitrate removal efficiencies in both granular carbon and sand media. (Author)

PLYWOOD PLANT GLUE WASTES DISPOSAL: PROGRESS REPORT,
Danforth G. Bodien. Feb 68, 56p PR-2
See also PB-215 095.

Descriptors: (*Plywood, Industrial wastes), (*Glue, *Industrial waste treatment), (*Water pollution, Glue), (*Industrial wastes, Glue), Phenol formaldehyde resins, Urea formaldehyde resins.
Identifiers: *Wood processing industry, *Water pollution control.

In the States of Oregon, Washington, Idaho, Montana, and California, 158 plywood plants generate an estimated 6.2 million gallons of waste per day from the cleanup of glue mixing equipment and glue spreaders. The waste is toxic and high in pollutional strength. Treatment of these glue wastes varies from plant to plant but generally consists only of solids separation or the removal of suspended matter. The objective of the study is to determine the magnitude and extent of the problem created by the disposal of glue wastes, review the characteristics of plywood glue wastes, and recommend methods of treatment for these wastes.

SOME RESULTS OF THE DETROIT-WINDSOR AIR POLLUTION SURVEY,
Morris Katz, and Jean J. Schueneman. 1958, 23p
Prepared in cooperation with the Department of National Health and Welfare, Ottawa (Ontario).

Descriptors: (*Michigan, *Air pollution), (*Canada, Air pollution).
Identifiers: *Detroit (Michigan), *Windsor (Canada), *Air quality data.

The origin of the study, its purposes, and means of accomplishment are described very briefly. The studies conducted and other actions undertaken are outlined. The principal technical findings are

discussed in terms of variation of pollution levels with location in the study area, meteorological parameters and time; estimates of total pollutants discharged to the atmosphere; results of the health study; and observations in the vegetation damage survey. Information is given which will be helpful in the planning and conduct of community air pollution surveys with regard to pollution measurements, pollution emission inventories, and meteorological studies. The voluntary vessel smoke control program and the results of it are described briefly. The current status of the project is mentioned. (Author)

DOMESTIC WATER USE IN PHOENIX, ARIZONA.
Final rept.,
Gerald M. Sullivan, James B. Coulter, and Thomas W. Bendixen. 15 Jun 59, 23p

Descriptors: (*Arizona, *Water consumption).
Identifiers: *Phoenix (Arizona).

The Federal Housing Administration has in recent years become increasingly aware of the pressing need for improvement in household sewage disposal systems. As a result, a project was undertaken to develop practical design criteria for seepage pits and beds. Careful consideration led to the selection of seven states for study areas, exhibiting wide diversities in such factors as climate, soil types, and construction requirements and practices. Water meter records for individual homes, whenever available, were secured from the water company so that fairly accurate estimates of loading could be established for disposal systems. An analysis of individual water meter records for about 240 homes in Phoenix, Arizona is presented herein, the records being collected in eight subdivisions that range from 2 1/2 years to 5 1/2 years old.

THE MICROSCOPIC FLORA AND FAUNA OF TREE HOLES,
James B. Lackery. 1939, 7p

Descriptors: (*Aquatic microorganisms, *Trees), Algae, Phytoplankton, Protozoa, Ecology, Closed ecological systems.
Identifiers: *Tree holes, Tree stumps.

Tree holes that contain water are rare. Occasionally one will be found which is in effect a permanent pool. With reference to their contained water they may be grouped roughly as those in the tops of living stumps, those in crotches or in the tops of protruding limbs or knots, and those in the sides of trees or limbs. Holes so far studied, with few exceptions, have contained rain water, that is, have been free from contamination by surface ground water. This report covers observations on 26 tree holes. About 140 species of algae and protozoa were recovered from these holes and are listed.

THE ROLE OF SULFIDE IN PREVENTING HEAVY METAL TOXICITY IN ANAEROBIC TREATMENT,
Alonzo William Lawrence, and Perry L. McCarty. 30 Sep 64, 32p

Descriptors: (*Anaerobic processes, Poisons), (*Microorganism control (Sewage), Anaerobic processes), (*Sewage treatment, Anaerobic processes), Inorganic sulfides, Copper, Zinc, Nickel, Iron.

Recently, others have reported that the toxic effects of copper could be eliminated by the addition of sulfide to the digester in stoichiometrically equivalent amounts. It was desired to assess the generality of their report, both with regard to high concentrations of copper and the use of sulfides for control of toxicity of other heavy metals. To this end, the study was performed to evaluate the use and importance of sulfide in the control of toxicity produced by the heavy metals copper, zinc, nickel, and iron in the anaerobic treatment of primary municipal sludge. IRRIGATION RETURN FLOW STUDY WAPATO IRRIGATION DISTRICT YAKIMA RIVER BASIN, WASHINGTON.
May 64, 31p Working Paper-47
Report on Columbia River Basin Project for Water Supply and Water Quality Management.

Descriptors: (*Yakima River Basin, *Water pollution), (*Ground water recharge, Yakima River Basin), (*Washington (State), Water pollution), (*Columbia River Basin, Water pollution), (*Irrigation, Water pollution).
Identifiers: Return flow.

A study of return flows in the Wapato Irrigation District in the Yakima River Basin in central Washington was made during the 1963 irrigation season to determine effects of the (principally) irrigation use on water quality. Parameters investigated included temperature, oxygen demand, hardness, turbidity, coliform bacteria, pesticide toxins, and various nutrient ions. Some degradation of quality was observed for nearly every parameter, but the overall effect was not severe. The chief recommendations for improvement of water quality involve improvements in amount and timing and method of application of the irrigation water, and a continuing educational safety campaign on use of pesticides. PLANKTON REMOVAL TESTS AND POTABLE WATER SURVEY AT NAVAL STATION, ARGENTIA, NEWFOUNDLAND.
C. Mervin Palmer, and Hayse H. Black. Jan 55, [illegible]p
Report to Department of the Navy Bureau of Yards and Docks, Washington, D. C.

Descriptors: (*Water supply, Phytoplankton), (*Phytoplankton, *Water treatment), Algae, Filtration, Sedimentation, Coagulation, Sanitary engineering, Potable water, Reservoirs, Bacteria, Chlorination, Canada.
Identifiers: *Argentia (Canada).

The report pertains primarily to intensive studies conducted at Argentia, Newfoundland during the period August 20 to August 31, 1954. The number of planktonic algae in the tap water at Argentia Naval Base was determined. Diatomite filtration was proved effective in removal of algal forms present in the water received at the naval base power station during the period of the test. Limited tests on small scale showed efficient removal of algae by coagulation and sedimentation. Survey of the naval base water supply from the standpoint of potability consisted of an inspection of the physical facilities at Clarks Pond pumping station and review of available bacteriological and residual chlorine records.

Malcolm S. Ferguson. Dec 57, 200p PHS-Pub-575
Sponsored in part by The Arizona State Department of Health, The Arizona Chapter of the American Coll. of Chest Physicians, and the Phoenix City Health Dept., Ariz.

Descriptors: (*Coccidioidomycosis, *Meetings), (*Fungus diseases, Meetings), Coccidiodes, Infections, Epidemiology, Ecology, Immunology, Pathology, Therapy, Diagnosis.
Identifiers: *Coccidioides immitis.

Coccidioidomycosis inspired the interest of only a few investigators in the United States prior to World War II. Valley fever, desert rhematism, or San Joaquin fever -- as it was commonly known -- appeared to be of local and limited concern. During the war, however, many military bases were established in the semi-arid endemic regions of the Southwest and almost overnight the disease became a major medical problem confronting the Armed Forces. Thousands of personnel stationed in the endemic areas developed disabling and occasionally fatal cases of coccidioidomycosis. Since that time, skin test surveys have shown that millions of people in this country have been infected by Coccidioides immitis and that thousands of new infections occur each year. Publication of these proceedings makes the wealth of material presented on the epidemiology, ecology, immunology, pathology, diagnosis, and treatment of one of man's most important mycotic diseases available to investigators everywhere.

SUGGESTED STATE WATER POLLUTION CONTROL ACT AND EXPLANATORY STATEMENT.
Oct 50, 26p PHS-Pub-49

Descriptors: (*Water pollution, *Legislation), State government.

Increasing interest in development and conservation of our country's water resources has been reflected in the concern which legislatures have shown with the problem of water pollution. Within the last decade more than half the States have adopted new legislation in this field or strengthened existing laws, and in 1948 the Congress passed the Water Pollution Control Act, the first attempt by the Federal Government to join with the States in a comprehensive attack on the problem as a whole. A 'Suggested State Water Pollution Control Act' has been prepared as a part of this effort. The underlying concept and purpose of the paper is to facilitate interstate cooperation for a more concerted attack on water pollution. (Author)

WATER QUALITY CONTROL STUDY. CHIKASKIA RIVER BASIN, KANSAS AND OKLAHOMA.

Aug 65, 31p

Descriptors: (*Chikaskia River Basin, *Water pollution), (*Kansas, Water pollution), (*Oklahoma, Water pollution), Reservoirs.

A study has been made of the need for and value of storage in Caldwell and Corbin Reservoirs for water quality control purposes in the Chikaskia River basin. The investigation revealed an immediate need for water quality improvement in Bluff Creek downstream from the Caldwell Reservoir site. Anticipated seepage losses from this reservoir will be adequate to maintain satisfactory water quality for expected uses and have attributable value. No need was found for storage for water quality control purposes in either reservoir. Future municipal and industrial water uses, used as the basis for estimating waste releases for this study, were provided by the Bureau of Reclamation with the exception of those projected for the Blackwell area which were adapted from a previous Public Health Service study. GENERAL SITE CHARACTERISTICS AND BASIC DATA NEEDS FOR THERMAL POWER PLANT SITE EVALUATION.
Apr 70, 10p

Descriptors: (*Electric power plants, *Site surveys), (*Water pollution, Electric power plants).
Identifiers: *Water pollution abatement.

Thermal power plant siting in the Northwest to date has lacked adequate consideration of aquatic environmental aspects, site safety and economics having been primary considerations. The Federal Water Pollution Control Administration (FWPCA) considers that aquatic environmental aspects are equally important. The document describes data which are necessary for satisfactory evaluation of selected power plant sites, relative to applicable water quality standards and FWPCA policy.

POLLUTION OF INTERSTATE WATERS OF THE MISSISSIPPI RIVER IN THE ST. LOUIS METROPOLITAN AREA.
Feb 58, 32p
Prepared in cooperation with State of Missouri, Division of Health; Bi-State Development of the Missouri-Illinois Metropolitan Area; State of Illinois Sanitary Water Board; and Public Health Service.

Descriptors: (*Mississippi River, *Water pollution), (*Missouri, Water pollution).
Identifiers: *Saint Louis (Missouri).

The St. Louis Metropolitan Area surrounds the confluence of two of America's largest rivers, the Mississippi and the Missouri. The Mississippi is, in fact, so large at St. Louis, and downstream, that it has gained the reputation of being practically immune to damage by pollution. This reputation is not justified, as is shown by the report of the Bi-State Development Agency, Mississippi River Water Pollution Investigation St. Louis Metropolitan Area, published in 1954 in cooperation with the States of Illinois and Missouri and the U. S. Public Health Service. The present report draws heavily on that excellent publication for basic data, facts, and conclusions. For the report data on sources of waste have been brought up to date and additional data including especially those on bacterial quality from several water supplies, have been assembled. Additional computations, based on the 1951-1952 data on bacterial contamination, oxygen demand, and dissolved oxygen both support and supplement the conclusions of the 1954 report.

MUNICIPAL WATER NEEDS IN THE PACIFIC NORTHWEST TO THE YEAR 2020,
Warren C. Westgarth. Feb 65, 27p Working Paper-54
Report on Columbia River Basin Comprehensive Project for Water Supply and Pollution Control.

Descriptors: (*Water consumption, *Pacific Northwest), (*Forecasting, Water consumption).

How much water does City X, with 12,000 inhabitants residing along the Snake River require to satisfy its municipal needs for the month of July of the year 2010. In the Columbia River Basin Comprehensive Project the requirement exists for reasonable values of municipal per capita water needs in the Pacific Northwest for the design years from 1960 through 2020. Because of the differences shown by the data at hand, it was necessary to study the Northwest as a separate area in order to derive reasonable projected per capita needs. The derived values in this paper were calculated for use in comprehensive planning and may not fit the requirements of consulting engineers and others who are interested in specific municipalities.

BACTERIOLOGICAL CRITERIA FOR MARKET OYSTERS,
Technical rept.,
C. B. Kelley. 1960, 18p SEC-TR-F60-2

Descriptors: (*Water pollution, Food contamination), (*Oysters, *Food contamination), (*Shellfish, *Bacteriology), (*Seafood, *Bacteriology), Standards, Bacteria, Indexes (Ratios), Fisheries, Regulations, Food processing, Water pollution.

The past few years have seen increased interest in the determination of bacteriological quality of shellfish as received at the market. Some agencies established either official or tentative working standards by which they could at least classify the product as received. Possibly the most notable is the classification system established by Canada in 1951, which groups the shellfish into three classes, Acceptable, Acceptable on Condition, and Rejectable, and allows judgment whether a product should enter or be tolerated in the consuming area. Because of the success of Canada with this scheme, the method was accepted in principle at the Shellfish Sanitation Workshop, with the modification of extending the coliform MPN limit in the Acceptable class from 2,400 to 16,000. The bacteriological criteria established at the 1956 Shellfish Sanitation Workshop is summarized.

INVESTIGATION OF MERCURY IN THE ST. CLAIR RIVER - LAKE ERIE SYSTEMS.

May 70, 113p
Prepared in cooperation with the Great Lakes Regional Office, Lake Huron Basin Office, and Lake Erie Basin Office, Federal Water Quality Administration.

Descriptors: (*Saint Clair River, *Mercury), (*Lake Erie, *Mercury), (*Water pollution, Mercury), Industrial wastes.

Data provided by the Bureau of Commercial Fisheries, Technological Laboratory, Ann Arbor, Michigan, show that mercury was present in fish throughout the St. Clair River - Lake Erie System. Available information indicates that no measurable concentration of mercury was present in water supply intakes in the St. Clair - Lake Erie System. Mercury in excess of 1 mg/kg dry weight was present in sediments in the Erie, Pennsylvania, and Euclid and Cleveland, Ohio, areas and the Buffalo, Black, and Ashtabula rivers. The waters of the study area revealed no mercury except for one sample collected at mile point 13.3. The Detroit River area is the primary source of mercury in the western end of Lake Erie. This is revealed by the distribution pattern established through sediment samples.

STUDY OF SLUDGE BULKING AT THE LANCASTER, PA. SEWAGE TREATMENT PLANT, NOVEMBER 20-26, 1935,
W. C. Purdy, and Russell S. Smith. 20 Dec 35, 16p

Descriptors: (*Sewage treatment, *Activated sludge process).

Lancaster, Pennsylvania has two practically new, activated sludge type sewage treatment plants, known as the North Plant and the South Plant. The two plants are identical in type, number and size of units, although, due to topographical conditions, the physical arrangement of the units is different. Considerable trouble has been experienced with bulking of the sludge at the South Plant. The report discusses an analysis of the problem to find its cause.

REACTION OF DIMETHYLAMINOBENZALDEHYDE IN SULFURIC ACID WITH LIQUID OLEFINS,
A. P. Altshuller, and S. F. Sleva. 1961, 12p

Descriptors: (*Alkene hydrocarbons, *Colorimetric analysis), (*Spectroscopic analysis, Alkene hydrocarbons).
Identifiers: *Benzaldehyde/dimethylamino.

The analysis of trace quantities of gaseous and vapor state olefins by reaction with dimethylaminobenzaldehyde (DAB) reagent in concentrated sulfuric acid has been reported, elsewhere. Thissame reagent also reacts with liquid olefins to form similar products also having strong absorption bands in the 500 micro meter region. The liquid olefins have been studied using somewhat different reaction conditions; consequently the positions, shapes, and intensities of the absorption bands differ somewhat from those reported in the vapor phase studies. Although the work done on liquid olefins was not as extensive as in the investigation of olefin gases and vapors, the results should have applicability in the identification and analysis of small quantities of liquid olefins. A PREDICTION MODEL OF MEAN URBAN POLLUTION FOR USE WITH STANDARD WIND ROSES,
Francis Pooler, Jr. 1958, 25p

Descriptors: (*Air pollution, *Sulfur dioxide), (*Atmospheric diffusion, Air pollution), (*Tennessee, Air pollution).
Identifiers: *Air quality data, *Nashville (Tennessee).

An empirical diffusion equation is used with an estimated inventory of SO2 emissions for Nashville, Tennessee, to compute monthly mean SO2 concentrations. Results are compared with patterns of concentrations obtained from a network of lead peroxide candle measurements. Reasonable agreement is found between computed and observed values; topographic effects are also indicated. Relative monthly emission rates deduced from the comparisons are used to show the effect of space heating requirements.

SPOT TEST DETECTION AND COLORIMETRIC DETERMINATION OF ANILINE, NAPHTHYLAMINE AND ANTHRAMINE DERIVATIVES WITH 4- -AZOBENZENEDIAZONIUM FLUOBORATE,
Eugene Sawicki, James L. Noe, and Francis T. Fox. 1959, 17p

Descriptors: (*Amines, *Colorimetric analysis), (*Spectroscopic analysis, Amines), (*Anilines, Colorimetric analysis), (*Diazotization, *Amines), Spot tests.

Some new sensitive procedures are introduced for the detection and determination of aniline, alpha and beta-naphthylamines, and alpha- and beta-anthramines, as well as their N-alkyl and N,N-dialkyl derivatives. The chromogens are (p-phenylazophenylazo) - aniline, -naphthylamine and -anthramine dyes. For example with N,N-dimethylaniline, the blue dication of N,N-dimethyl-p- (p-phenylazophenylazo) aniline is formed. Because of the widely differing rates of reaction naphthylamine or anthramine derivatives can be determined in the presence of aniline derivatives. Also, with the help of a masking agent a dialkylaniline can be determined in the presence of primary and secondary amines. Spot tests for aniline, naphthylamine and anthramine derivatives are described.

A STUDY OF THE CONCENTRATION AND ESTIMATION OF ORGANIC CHEMICAL COMPOUNDS IN RAW AND FILTERED SURFACE WATERS,
Harry Braus, F. M. Middleton, and Graham Walton. 18 Apr 50, 21p
Presented at National Meeting of the American Chemical Society (117th), 17-19 Apr 50, Detroit, Mich.

Descriptors: (*Water analysis, *Water pollution), (*Activated carbon, Water analysis).
Identifiers: *Water pollution detection.

A knowledge of the kinds and concentrations of organic chemical compounds in surface waters is important and useful in studies concerned with tastes and odors in drinking water, natural purification of streams, analysis and tracing of industrial wastes, and toxic and other physiological effects on man and animal. Direct analysis for most organic compounds is not usually possible due to the minute concentrations which normally occur in surface waters. The report describes a method for the concentration and estimation of organic compounds in raw and filtered surface water. Possible applications of the techniques presented are discussed. (Author)

REPORT ON THE IMMEDIATE WATER POLLUTION CONTROL NEEDS FOR THE INTERSTATE AND INTRASTATE WATERS OF THE ST. LAWRENCE REGION.

Jun 67, 90p

Descriptors: (*Lake Champlain, *Water pollution), (*New York, Water pollution), (*Vermont, Water pollution), Saint Lawrence River.

The report reviews the water pollution problems in the St. Lawrence Region, which is defined to include all streams draining to the St. Lawrence River from the St. Regis River in New York on the west to Lake Memphremagog in Vermont on the east. The major drainage basin within the Region is that of Lake Champlain. The discharge of waste from municipalities, industries, and numerous other sources degrades water quality and prevents full utilization of the natural resources throughout the Region. The purpose of the report is to delineate those actions which should be undertaken immediately to prevent further degradation and to provide enhancement of these waters. These actions include not only construction of new or improved municipal and industrial waste treatment facilities, but also studies, surveys and research which are needed to develop sound water quality management programs for the future. ELECTROCHEMICAL TREATMENT OF MUNICIPAL WASTE WATER.
Final rept.,
H. C. Miller, and W. Knipe. 1 Oct 63, 113p
Prepared in cooperation with Pennsalt Chemicals Corporation, Research and Development Department. See also report dated March 65, PB-168 794.

Descriptors: (*Sewage treatment, *Electrolysis).

Although electrolytic methods of treating waste water are reported in the older literature, their effectiveness is in doubt. This study has shown that an electrolytic treatment of secondary effluent from an activated sludge plant using lead dioxide anodes can reduce ABS by 90%, COD by 80%, and chloride by 90%. This treatment has little effect on total solids. The cost of treatment will vary between $.90 and $2.42 per 1000 gallons. The plant costs will vary between 9 and 26 million dollars for a 10 mgd plant. These costs do not include site preparation, roads, landscaping, fences, land area, lighting, laboratories, or other buildings, and the costs depend on the completeness of the treatment and the electrical conductivity of the waste water. (Author)

RESIDENTIAL SOLID WASTE GENERATED IN LOW-INCOME AREAS,
Samuel Hale, Jr. 1972, 17p EPA-SW-83TS

Descriptors: (*Waste disposal, *Socioeconomic status), (*Urban areas, Waste disposal), Distribution (Property), Characteristics, Trends, Residential buildings.
Identifiers: *Economically depressed areas, Disadvantaged groups, Low income groups, *Poverty areas, *Solid waste disposal.

Variations inherent in the generation of solid wastes make it extremely difficult to predict quantities that can be expected from a dwelling within a residential neighborhood. Some possibly influencing factors are climate, season, socioeconomic level, and dweller density. The objective of the study was to examine the quantities and critical factors involved in the generation of solid wastes in low-income residential neighborhoods. The results are presented in order that a better understanding of waste quantities and characteristics may be obtained. (Author)

TIME-TEMPERATURE EFFECTS ON SALMONELLEA AND STAPHYLOCOCCI IN FOODS. I. BEHAVIOR IN BROTH CULTURES AND REFRIGERATED FOODS,
Robert Angelotti, Elizabeth Wilson, Milton J. Foter, and Keith H. Lewis. 1959, 60p SEC-TR-F59-2

Descriptors: (*Food processing, *Food poisoning), (*Salmonella, *Food contamination), (*Staphylococcus, *Food contamination), Temperature, Growth, Food processing, Food deterioration.

Staphylococci and salmonellae are the principal causes of illness currently encountered in perishable foods. Time-temperature data comparable to those available for the pasteurization of milk or for canning, which define conditions of refrigeration, cooking, or warm holding of perishable foods, have not been established for these organisms. These studies were undertaken to make available an organized body of technical data on the critical time-temperature values for salmonellae and staphylococci under these conditions. (Author)

TASTE AND ODOR PRODUCTION BY BLUE-GREEN ALGAE IN RESERVOIRS.
Progress rept. 1 Jun 62-30 Sep 64,
Arden R. Gaufin. 28 Oct 64, 25p
Grant FWPCA-WP-334

Descriptors: (*Water pollution, Algae), (*Algae, *Limnology), (*Cyanophyta, Limnology), (*Water pollution, *Odors), (*Reservoirs, Algae), Taste, Water supply, Lakes, Streams, Phytoplankton, Aquatic plants, Plant physiology, Water chemistry.

Microorganisms in water that have been incriminated in taste and odor production include the protozoa, bacteria, actinomycetes, molds, and algae. The last group is particularly important in water supplies. The degree to which a body of water can support a dense 'bloom' of an alga and becomes highly odoriferous depends on the specific environmental requirements of the alga, including its nutritional needs. In their growth, algae utilize the mineral nutrients that have come from the land as well as carbon dioxide from the air or that released in the decay of organic matter. The report presents results of a study concerned with studying the relationships between algae and nutrients.

NATIONAL ESTUARINE INVENTORY. HANDBOOK OF DESCRIPTORS,
T. A. Wastler, and L. C. deGuerrero. Jun 68, 107p

Descriptors: (*Estuaries, *Data aquisition), Forms (Paper).

As part of the National Estuarine Pollution Study it is essential to describe the national estuarine system in terms of those parameters which are necessary to: identify quantitatively the present and potential uses of the estuarine resource; identify the present extent of pollution damage to beneficial uses of esturine zones; and make possible quantitative summaries and comparisons among the individual estuarine components of the national system. This inventory should provide a foundation for a continuing national estuarine inventory. (Author)

A REPORT ON BACTERIAL POLLUTION AFFECTING SHELLFISH HARVESTING IN NEWPORT RIVER, NORTH CAROLINA.
Apr 72, 64p

Descriptors: (*Newport River, *Bacteria), (*Water pollution, Newport River), (*North Carolina, Water pollution), Shellfish, Fisheries, Food contamination, Coliform bacteria, Sewage, Streptococcus, Concentration (Composition).
Identifiers: Sewage treatment effluent, Carteret County (North Carolina), *Water quality data.

A joint study is described which was conducted to determine the sources of bacterial pollution in freshwater and estuarine portions of the Newport River in Carteret County, North Carolina near Moorehead City. The Newport River is an important shellfish producing area, some of which has been closed to shellfish harvesting since October 1969. The report is concerned with the levels of bacterial indicators in the Newport River estuary and tributaries and, where possible, identification of the probable sources of the indicators. Conclusions are drawn and recommendations presented as to means of controlling bacterial contamination in the Newport estuary.

SAMPLE TYPE VII (WATER-OXYGEN DEMAND).

Jul 60, 39p
Report of the Analytical Reference Service Training Program.

Descriptors: (*Water analysis, *Biochemical oxygen demand), (*Water pollution, Biochemical oxygen demand).
Identifiers: *Water pollution detection.

Biochemical oxygen demand has been used for many years as a parameter in the study of water pollution. It is useful in the design and operation of waste treatment facilities, in the evaluation of the effects of wastes on streams, and in the determination of water quality. In the past, many authorities have considered it the most important single parameter available. This particular study was undertaken to fill gaps in the available information on the precision and accuracy of the oxygen demand determinations. Through simultaneous analysis of an identical sample, it is hoped that the common variables of the methods can be evaluated.

RESEARCH ON INDUSTRIAL WASTES AS RELATED TO WATER QUALITY,
C. C. Ruchhoft. Feb 53, 27p

Descriptors: (*Water pollution, *Taste), (*Odors, Water pollution), Industrial wastes.

It is the purpose of this paper to discuss industrial waste and water quality research that is needed to clarify the objectives for stream pollution abatement for the purpose of obtaining better water quality for domestic and industrial use. It is axiomatic that a bad tasting or smelling water is water of poor quality and is not conductive to public health, even though it is bacteriologically safe. The report discusses progress in the reduction of taste and odor producing constituents in surface water.

A FULL-SCALE EVALUATION OF LUXURY UPTAKE FOR PHOSPHORUS REMOVAL,
M. C. Mulbarger, D. G. Shifflett, M. C. Murphy, and D. D. Huffman. Feb 70, 29p

Descriptors: (*Activated sludge process, Phosphorus), (*Chemical removal (Sewage treatment), *Phosphorus), (*Sewage treatment, Phosphorus), Aerobic processes, Anaerobic processes, Clarification, Sludge digestion, Absorption (Biology), Performance evaluation, Cost estimates, Capitalized costs, Operating costs.
Identifiers: *Water pollution control.

A 1.0 mgd wastewater treatment plant, designed for biological phosphorus removal within an activated sludge system, was evaluated over a variety of operating conditions during its first year of operation. A maximum phosphorus removal rate 0.026 pounds of phosphorus removed per pound of COD removed was measured at one particular cell residence time. High influent phosphorus concentrations, however, reduce the plant's probable performance to less than 50 percent phosphorus removal at optimum conditions. Phosphorus removal apparently occurs through a combination of metabolic and physical-chemical mechanisms. The specialized plant design has caused several severe operating problems and capital and operating expenditures are significantly greater than reported for conventional activated sludge treatment. COMBINED TREATMENT OF DOMESTIC AND INDUSTRIAL WASTES,
Hayse H. Black. 1953, 11p
Presented at Annual Meeting of Illinois Association of Sanitary Districts, Bloomington, Illinois, September 2, 1953.

Descriptors: (*Industrial wastes, *Sewage treatment).

There are numerous types and combinations of industrial wastes currently being successfully treated in municipal sewage treatment plants. There is reason to believe that this practice will be continued and expanded. Combined treatment should prove economically sound and industry will be more inclined to reduce process wastes when

required to pay service charges. The progressive industrialist recognizes the expense of waste treatment as a legitimate cost of production. (Author)

SPECTROPHOTOMETRIC DETERMINATION OF CROTONALDEHYDE.

1960, 17p

Descriptors: (*Crotonaldehyde, *Spectroscopic analysis), (*Gas analysis, Crotonaldehyde), Aldehydes.
Identifiers: *Air pollution detection.

A spectrophotometric method has been developed for the analysis of crotonaldehyde based on its reaction with 4-hexylresorcinol. The product formed has two analytically useful absorption maxima at 385 and 345 micrometers. The crotonaldehyde product obeys Beer's law in the 1 to 20 microgram ml range. Saturated aldehydes and ketones, alcohols, esters, acids, most hydrocarbons and phenols do not interfere significantly. Unsaturated aldehydes, unsaturated ketone and diolefins in excess interfere appreciably, as does nitrogen dioxide. Results of the analyses of a number of liquid mixtures are given. (Author)

RECOMMENDED UNITS OF EXPRESSION FOR AIR POLLUTION,
Frank P. Terraglio, James P. Sheehy, and Raymond M. Manganelli. 1957, 11p
Presented at the Air Sanitation Technical Conference Mid-Atlantic States Section of the Air Pollution Control Association (6th), November 20, 1957, New York City.

Descriptors: (*Air pollution, *Metrology).

A system of units of commonly measured parameters in the field of air pollution is presented. Many of the units currently in use are listed together with the recommended unit to be used. An attempt was made to reduce the number of units of expression to one for each of the parameters. Also units were selected that would give small whole numbers for ease of handling and discussion. It will be noted that all values are expressed in the metric system. (Author)

OKLAHOMA CITY TASTE AND ODOR STUDY. A PRELIMINARY STUDY OF THE TASTE AND ODOR PROBLEMS IN THE OKLAHOMA CITY WATER SUPPLY,
Clarence M. Tarzwell. Jun 50, 41p

Descriptors: (*Water supply, *Oklahoma), (*Water pollution, Oklahoma), (*Taste, Water supply).
Identifiers: *Oklahoma City (Oklahoma).

During September, October and November, 1949, the Water Department of Oklahoma City has a very serious taste and odor problem in one of their two storage reservoirs, Lake Hefner. Because these problems have arisen in the new storage reservoir, Hefner, and all water supplies are obtained from the North Canadian River, the Oklahoma City officials are apprehensive of the possible effects of the recently completed Canton Reservoir on their water supply. The purpose of this investigation was to study ecological conditions in Canton Reservoir and to examine the situation at Oklahoma City in order that the problem could be more adequately defined. The Oklahoma City water supply reservoirs and plants were examined and data collected on their physical characteristics, their mode of operation, the chemical content of the water, turbidities and their general ecology.

A REPORT ON THE OCCURRENCE OF EXCESSIVE FOAM AT THE WHEELING, WEST VIRGINIA WATER PURIFICATION PLANT,
F. M. Middleton. Feb 54, 6p

Descriptors: (*Water pollution, *Detergents), (*Water treatment, Detergents).
Identifiers: *Wheeling (West Virginia).

The incident of the foam at Wheeling, West Virginia and the subsequent findings strongly point to the need for additional research on the effects of detergents on streams used as a source for water supplies. More suitable analytical methods need to be developed. Methods for treating waters containing these materials at the water plant have not been sufficiently studied. Great variability may exist in the persistence in water of detergent material and the allied compounding agents used in commercial formulations. Disruption of normal water treatment processes by such materials is cause for concern. (Author)

WATER QUALITY CONTROL AND MANAGEMENT, SNAKE RIVER BASIN.
Sep 68, 75p

Descriptors: (*Water pollution, *Snake River), (*Washington (State), Water pollution), (*Idaho, Water pollution), (*Wyoming, Water pollution), (*Utah, Water pollution), (*Nevada, Water pollution), (*Oregon, Water pollution).

The thrust of this report is better and more comprehensive management to accommodate changing and multiple uses of the Snake River water resources. The report summarizes the findings of studies which have provided the inpetus to Federal-State water pollution control planning in the Snake Basin since 1962. It tells where pollution exists and why it exists. It tells what corrective action has already been initiated. It tells what further steps must be taken to preserve and enhance the quality of water resources of the basin. And it serves as a blueprint from which to build future programs for the water quality essential to the many uses and enjoyment of water in the Snake Basin.

RECENT AIR POLLUTION CONTROL DEVELOPMENTS -- A REVIEW OF PUBLISHED INFORMATION.
Bibliography for period Aug 58-Jul 60, David G. Stephan. Oct 60, 38p

Descriptors: (*Air pollution, *Reviews), Bibliographies.
Identifiers: *Air pollution control.

A concise review and bibliography is presented of information published on air pollution control during the two-year period ending July 1960. A total of 336 articles on air pollution control were evaluated. Most could be categorized as (1) a report of research, (2) a description of a specific control installation, (3) a discussion of control for a particular industry or for a given process, (4) a description of control equipment, or (5) a discussion of a class of control devices or techniques. The few remaining papers were across-the-board discussions of pollution problems or of control devices in general. Articles describing research results and those of a general nature are reviewed. Articles describing research results and those of a general nature are reviewed. These and the remaining references are included in a subject index keyed to a complete bibliography.

THE NATURE OF ORGANIC COLOR IN WATER,
Russell F. Christman, and Masood Ghassemi. Jan 66, 51p
Grant FWPCA-WP-00558

Descriptors: (*Water pollution, *Colors (Materials)).

The organic materials responsible for color in water have been isolated from several natural streams and subjected to comparative chemical studies. Oxidation with alkaline-CuO was found to be an effective method of degrading the complex color molecule to recognizable chemical structures. Seven degradation products of natural organic color were identified; namely vanillin, vanillic acid, syringic acid, catechol, resorcinol, protocatechuic acid and 3,5-dihydroxy-benzoic acid. Evaluation of the effect of the oxidation technique on model compounds coupled with the knowledge of seven color degradation products resulted in the proposal of a structural formula for color producing molecules in water. Grant WPD-21-02-64

Descriptors: (*Sewage treatment, Chemical removal (Sewage treatment)), (*Activated sludge process, Chemical removal (Sewage treatment)), (*Chemical removal (Sewage treatment), *Water reclamation).
Identifiers: Tertiary sewage treatment.

In laboratory studies, various processes were tried for further treatment of effluent from a laboratory scale activated sludge plant. Ion exchange has been utilized with different resins and in different configurations to remove nutrients, nitrogen and phosphorus, and also organic materials. A strong-base ion exchange resin, regenerated with chlorides, was the most successful. Phosphorus and color were removed by chemical coagulation using liquid alum and commercial ferric sulfate as coagulants. The effect of foam fractionation on ABS and COD removal and on the form of nitrogen was studied. In addition, nitrogen removal by a denitrification process was also studied. (Author)

PEAT BOG WASTE STABILIZATION.
Final rept. 1 Mar 67-28 Feb 69,
A. M. DeYoannes, and R. S. Farnham. Feb 69, 47p
Grants WPD-164-01 (RI)-67, WPD-164-02-68
Prepared in cooperation with Minnesota Univ., Dept. of Soil Science.

Descriptors: (*Peat deposits, *Waste disposal), (*Wood wastes, *Industrial waste treatment).
Identifiers: *Wood processing industry, *Liquid waste disposal.

The document studies the phenomenon by which waste water from a wood processing plant became stabilized after discharge onto an adjacent peat bog in Northern Minnesota. It was thought that peat might be ultimately used for on site water pollution abatement and an explanation of the mechanism involved should be determined. Both batch type experiments and continuous loading studies were conducted to study aerobic trickle-type filtration processes using natural peat as the filtering media to remove phosphates, calcium and reduce B.O.D. of effluents (both natural and synthetic) and the use of column and lysimeter studies of natural peat removed from bogs to study the mechanisms involved in absorbtion of elements in sewage and synthetic effluents and determine loading rates.

WATER RECLAMATION STUDY PROGRAM. RECLAMATION OF REUSABLE WATER FROM SEWAGE.
Progress rept. 15 Sep 65-15 Aug 66,
George E. Bennett, Rolf Eliassen, and Perry L. McCarty. Aug 66, 45p
Grant WPD-21-04-66

Descriptors: (*Chemical removal (Sewage treatment), *Nutrients), (*Sewage treatment, *Ion exchanging), (*Water reclamation, Sewage treatment), Aactivated sludge process.

A demonstration plant for the removal of nutrients from activated sludge effluent has been operated by Stanford University. During the past eleven months, significant accomplishments have included the redesign of filtration and ion-exchange equipment and replacement of the original equipment with optimized units, successful plant-scale restoration of the ion-exchange resin (twice), increase of the filtration unit and ion-exchange flow rates, reductions in operating chemical costs, demonstration of the effects of non-nutrient anions in the water to be processed, evaluation of the influence of trace nutrient materials (i.e., materials other than phosphorous and nitrates) upon algal growth potential.

PROCEEDINGS: NATIONAL CONFERENCE ON PACKAGING WASTES. (1ST), 22-24 SEPTEMBER 1969.
1971, 241p EPA-SW-9RG
Grant PHS-EC-00324
Paper copy available from GPO $2.00 as stock no. 5502-0013.

Descriptors: (*Waste disposal, *Packaging materials), (*Meetings, Waste disposal), Management planning, Metals, Glass, Plastics, Abatement, Government policies.
Identifiers: *Solid waste disposal.

The First National Conference on Packaging Wastes was held September 22 through 24, 1969 in San Francisco. The conference was structured to promote meaningful dialogue among top-level officials in the entire packaging and user industries, waste disposal industry, government and universities, and also to attract participation of the public at large--all aimed at generating ideas for and approaches to the solution of packaging waste problems. The conference program focused attention especially on defining and clarifying the many problems related to the accumulation and disposal of packaging wastes. The conference did not result in many specific answers to packaging wastes problems: However it did formulate the proper questions in terms of approach and did identify individuals, industrial organizations, government agencies and universities with the capability of cooperatively developing the means for managing and controlling these packaging wastes. The reports presented at the meeting are given in full.

BATHING WATER QUALITY AND HEALTH - II. INLAND RIVER,
Russell S. Smith, and T. D. Woolsey. 1952, 76p
See also PB-215 332.

Descriptors: (*Public health, Swimming), (*Ohio River, Water pollution), (*Water pollution, Swimming), (*Kentucky, Water pollution), Bacteriology, Epidemiology, Infections, Beaches, Environmental surveys.
Identifiers: Dayton (Kentucky), Bellevue (Kentucky).

A survey was made of bathing water that exceeded the water pollution limits allowed under the most liberal existing standards. If the study showed no significant increase in illness among bathers using such polluted water, then many of the existing standards might be considered unduly restrictive. The Ohio River in the vicinity of Cincinnati met the required conditions of such polluted water. A

survey of illness incidence in the Kentucky communities of Dayton and Bellevue adjacent to a beach off the Ohio River might yield valuable information. Thus an epidemiological survey, during the summer of 1949 is reported.

BATHING WATER QUALITY AND HEALTH - III. COASTAL WATER,
L. J. McCabe, Jr. 1961, 145p SEC-TR-W61-51
See also PB-215 329.

Descriptors: (*Public health, Swimming), (*Water pollution, *Swimming), (*Long Island Sound, Water pollution), Epidemiology, Infections, Bacteriology, Environmental surveys, Beaches, Salt water, New York.

There are important variants in salt water that are not encountered by fresh water swimmers. Salt water has a bactericidal effect which causes a rapid diminution in the densities of coliform and other introduced bacteria. Because of salinity, there is also less inclination to take water into the mouth and therefore less likelihood of infection by enteric pathogens that might be present. The objectives of the present study were to: Determine the bacterial quality of coastal waters at the bathing areas; Investigate the physical factors which influence bathing water quality; Collect epidemiological data on diseases, minor illnesses, and irritations which might be attributable to bathing, and correlate them with water quality.

WATER QUALITY MANAGEMENT OF THE FUTURE,
Joseph E. Flanagan, Jr. 1960, 6p
Presented at the Annual Meeting of the New England Water Works Association, Montreal (Quebec) 18-21 Sep 60.

Descriptors: (*Water resources, Management planning).

Water quality management in its broader sense is discussed in terms of the future, for it appears to be more a concept than a practice. The development of it as a practice is a major need and a major challenge of the next decade. It embodies a set of procedures for keeping each segment of the surface water resource in the continuous dynamic balance necessary to meet the requirements of each significant use and next use. The report discusses the trends of future management.

National Air Pollution Control Administration, Washington, D.C.
REPORT FOR CONSULTATION ON THE GREATER METROPOLITAN CLEVELAND INTRASTATE AIR QUALITY CONTROL REGION.
Feb 69, 46p APTD-1220

Descriptors: (*Air pollution, *Ohio).
Identifiers: *Cleveland (Ohio), *Air quality data.

The basic background information is presented for the consultation with state and local authorities prior to the designation of air quality control regions as stipulated in the Clean Air Act. Boundaries for the regions are proposed and the factors which are the basis for the proposed boundaries are discussed. Reports for consultation consider ten factors: geography; population and economic activity; their prospective growth; probable direction of physical growth; the emission inventory and the location of sources; air quality and pollution transport analysis; regional planning; air pollution control; and governmental jurisdictions. STATE OF THE ART OF TEXTILE WASTE TREATMENT.
Water pollution control research series,
John J. Porter. Feb 71, 356p EPA-WQO-12090-ECS-02/71
Paper copy available from GPO $2.50 as stock no. 5501-0090.

Descriptors: (*Textile industry, *Industrial waste treatment), (*Water pollution, *Industrial wastes).
Identifiers: *Water pollution control.

A study has been made of waste treatment methods and practices used in the Textile industry. Information was obtained from people working in the textile processing industry, designing waste treatment plants, and enforcing state and federal regulations on waters discharged to streams and natural reservoirs. To supplement this information the literature was reviewed and an annotated bibliography prepared using relevant articles. The report contains sections on the following: characteristics of textile waste, waste treatment techniques, treatment methods in use, effects of textile wastes on receiving waters, the cost of waste treatment operations, and state and federal regulations governing discharge waters. Areas of needed research are recommended to improve waste treatment methods currently practiced by the textile industry. The report is designed to give the reader an insight into the problems facing the textile industry, solutions presently available, and references for further reading. The annotated bibliography contains references on synthetic fiber manufacturing wastes, detergent waste treatment, instrumentation, plant design, water treatment for plant use as well as articles pertaining specifically to textile waste treatment. RADIOACTIVE FALLOUT IN RAIN IN THE CINCINNATI AREA,
J. S. Nader, A. S. Goldin, and L. R. Setter. Sep 54, 17p

Descriptors: (*Radioactive contaminants, *Air pollution), (*Ohio, Radioactive contaminants), (*Fallout, Ohio).
Identifiers: *Precipitation washout, *Cincinnati (Ohio).

A study of the radioactivity of precipitation in the Cincinnati area was made for twelve months beginning March 1953. Seven samples of precipitation between March 3 and March 18 were tested to obtain the background level in rainfall. On March 19, two days after the first weapon test of the Spring Series, a sharp rise in the beta activity of rain occurred. The radioactivity of subsequent rains during the test period was usually of greater intensity and varied widely. Following the weapon tests the activity of the rain decreased to levels near that of background. All activity measured was far below the intensity considered to be hazardous. The more pertinent findings of the study are presented. (Author)

THE CHANNEL AERATION PROCESS AT GLENWOOD, MINNESOTA-A TWO YEAR STUDY,
H. O. Halvorson, Roar Irgens, and Henry Bauer. 1969, 30p
Prepared in cooperation with Southwest Missouri State Teachers Coll., Springfield, and the Minnesota State Board of Health, Minneapolis. Sponsored in part by the Water Pollution Control Administration, Washington, D. C.

Descriptors: (*Sewage treatment, *Lagoons (Ponds)), Channels (Waterways).
Identifiers: *Aeration ponds, Glenwood (Minnesota).

The report discusses a channel aeration demonstration plant. Glenwood, Minnesota was chosen as a site for a demonstration plant for the following reasons: It discharged its sewage effluent into a lake - (Lake Minnewaska) and this was the only

organized community discharging sewage effluent into this lake. The algae growth in the lake was becoming progressively worse each year, particularly in that portion of the lake nearest the inlet of the creek that carried the effluent from the sewage treatment plant. The community was concerned about the preservation of the lake and therefore were very receptive to try this new type of treatment.

REPORT ON OIL SPILLS AFFECTING THE MINNESOTA AND MISSISSIPPI RIVERS, WINTER OF 1962-63.

1963, 51p

Descriptors: (*Water pollution, Oils), (*Minnesota River, Water pollution).
Identifiers: *Oil pollution, *Oil spills.

Two separate oil spills occurred on the Minnesota River during the winter of 1962-63, one of petroleum oil and the second of soybean oil. During the spring ice breakup, these oils discharged to the Mississippi River at St. Paul, Minnesota, and dispersed into several off-channel lakes between St. Paul, Minnesota, and Alma, Wisconsin, and resulted in the death of several thousand wild ducks. Some of the remedial activities included removal of oil from the water surface, construction of floating booms to divert oil from off-channel waters, and assistance in rescue of immobilized ducks and other wildlife. The object of this report is to present highlights of events and results of activities and studies conducted during the cleanup.

PACKAGE SEWAGE TREATMENT PLANTS CRITERIA DEVELOPMENT. PART II: CONTACT STABILIZATION,
Robert M. Brown, Charles A. Farish, and Andrew T. Dempster. Jun 68, 30p
Contract WPD-74

Descriptors: (*Sewage treatment, *Contacting), (*Packaged sewage plants, *Contactors), (*Activated sludge process, Contacting), Performance evaluation.

This report completes the study on package plants. The purpose of this phase of the study was to develop performance criteria for contact stabilization type package sewage treatment plants. It should be emphasized that the data which appears was collected during the period of criteria development and not under necessarily normal operating conditions. It was found that operation of these plants indicated that this process can satisfactorily remove the major portion of both suspended solids and the bio-chemical oxygen demand in domestic wastewater without the creation of an odor or noise nuisance in the surrounding area.

MICROBIOLOGY OF ANAEROBIC SLUDGE.
Progress rept. 1 Jun 66-1 Sep 68,
Robert A. Mah. 1 Nov 68, 27p

Descriptors: (*Anaerobic processes, *Aquatic microbiology), (*Sewage treatment, Anaerobic processes).
Identifiers: *Methane bacteria.

Studies on the microbiology of anaerobic sludge disclosed that non-methanogenic strictly anaerobic bacteria comprised one of the most numerous groups of organisms present. These previously unreported organisms are mainly un-named Bacteroides species. Euryoxic bacteria constitute only a minor fraction of the normal bacterial flora but can become predominant in very short time if fermentable carbohydrates are present. This finding emphasizes the necessity of using unenriched fermentations for studying the sludge digestion process. Work is in progress to determine the source of substrates and the organisms responsible for the generation of acetic acid (the main methane-producing substrate). (Author)

CHEMICAL OXIDATION OF ORGANIC CONTAMINANTS IN WATER SUPPLIES,
R. G. Spicher, and R. T. Skrinde. 1963, 42p
Grant PHS-WP-346
Presented at the Annual Conference of the American Water Works Association (83rd), Kansas City, Mo., 19-24 May 63.

Descriptors: (*Water treatment, *Dissolved organic matter), (*Chemical removal (Water treatment), *Oxidation), (*Oxidizers, *Potassium permanganate).

The purpose of the research was to investigate the chemical oxidation of organic refractories with potassium permanganate. Permanganate oxidation of various organic refractories was investigated in deionized water and in modified natural river water systems. Controlled amounts and types of organics were reacted with permanganate under controlled conditions of pH, temperature, time and concentrations. Carbon chloroform extracts (CCE) and carbon alcohol extracts (CAE) were the two major groupings of organic refractories investigated.

SPECTROPHOTOMETRIC DETERMINATION OF 4-AMINOAZOBENZENES, 4-AMINOSTILBENES, SCHIFF BASES, AND ANALOGOUS COMPOUNDS WITH 3-METHYL-2-BENZOTHIAZOLONE HYDRAZONE.
Eugene Sawicki, and Thomas R. Hauser. 1961, 15p

Descriptors: (*Amines, *Colorimetric analysis), (*Spectroscopic analysis, Amines), (*Carcinogens, Spectroscopic analysis).
Identifiers: *Stilbene/amino, *Benzothiazolinone/hydrazone-methyl, *Aniline/phenylazo.

3-Methyl-2-benzothiazolone hydrazone is shown to be a powerful and versatile electrophilic reagent which can be used for the spectral detection and determination of strongly nucleophilic molecules containing a carbon atom of high electron density. The determination of approximately 50 azo dyes and a smaller group of stilbene and Schiff base derivatives by a new procedure for these compounds is described. 4-Amino-, 4-alkylamino, and 4-dialkylamino derivatives of azobenzene can be readily analyzed. The determination of N,N-dialkyl-4-aminoazobenzene was thoroughly investigated. (Author)

BOISE RIVER BASIN (IDAHO) PRELIMINARY ECONOMIC RECONNAISSANCE AND ESTIMATE OF GROWTH, 1960-2010.

24 May 62, 16p Working Paper-18
Report on Columbia River Basin Project for Water Supply and Water Quality Management.

Descriptors: (*Boise River Basin, *Economic development), (*Idaho, Economic development), River basin development.

The analysis is intended to provide a preliminary estimate of the economic potentials and anticipated growth of the subject area. Two limitations apply to this study. The first is that it is intended only as a preliminary estimate of the outlook for the subject area's growth. The second limitation is that this study is intended for use particularly in assessing future water needs. Emphasis has been placed on the analysis of those industries which make heavy demands upon the water resource.

THE RADIAL DISTRIBUTION OF SULFUR DIOXIDE SOURCE STRENGTH AND CONCENTRATION IN NASHVILLE,
Ralph I. Larsen, William W. Stalker, and Charles R. Claydon. 1961, 23p
For presentation at the Annual Meeting (54th) of the Air Pollution Control Association, New York, N.Y., June 11-15, 1961.

Descriptors: (*Air pollution, *Tennessee), Sulfur dioxide.
Identifiers: *Nashville (Tennessee).

An air pollution study was conducted in Nashville, Tennesses in 1958-1959. The study was conducted to investigate possible relationships between air pollution and health and to obtain information on a number of the engineering and meteorologic phases of air pollution. As one aspect of the study, sulfur dioxide was studied intensely, from a detailed emission inventory to ambient air measurements using several sampling techniques. This paper discusses sulfur dioxide source strength and ambient levels of sulfur dioxide reported in terms of sulfation, using lead peroxide candles, as a function of radial distance from the center of Nashville.

THERMAL POWER AND THE COST OF WASTE HEAT TREATMENT.

24 Sep 68, 30p

Descriptors: (*Nuclear power plants, *Heat recovery), Cost estimates.
Identifiers: *Water pollution control, *Thermal pollution.

An evaluation is made of the impact of waste heat treatment costs on the cost of power to consumers when new thermal nuclear power plants are integrated into an ongoing company system. The analysis presented attempts to analyze the incremental cost to the consumer of a nuclear-fueled thermal power unit, using Portland General Electric as the example utility, and the added increment to that cost attributable to the installation of a waste heat treatment method. The question of the importance of the resulting competitiveness in power rates between the Pacific Northwest and other regions is also indicated.

NUMERICAL AND ANALYTICAL SOLUTIONS OF DISPERSION PROBLEMS IN HOMOGENEOUS AND LAYERED AQUIFERS,
Uri Y. Shamir, and Donald R. F. Harleman. May 66, 213p 89, RR66-14
Grant FWPCA-WP-00711

Descriptors: (*Water pollution, Hydrology), (*Aquifers, Hydrology), (*Hydrology, Mathematical models), Computer programs.

From a review of previous work on dispersion in porous media it is concluded that at present the tools for solving most practical problems of mixing of fluids in artificial recharge, waste water disposal and ground water contamination are still missing. A numerical method is proposed for the solution of dispersion problems in steady three-dimensional potential flow fields in porous media. The numerical scheme uses the convective dispersion equation in curvilinear coordinates consisting of the flow streamlines and equipotentials. By means of this equation any problem of dispersion in a steady three-dimensional potential flow fields in porous media. The numerical scheme uses the convective dispersion equation in curvilinear coordinates consisting of the flow streamlines and equipotentials. By means of this equation any problem of dispersion in a steady potential flow field, as well as a special type of problems with unsteady flow, can be solved. The numerical scheme is programmed for a computer and applied to a few simple cases, for which analytical solutions exist.

Descriptors: (*Waste disposal, *Bibliographies), Refuse disposal.
Identifiers: *Solid waste disposal.

The bibliography is the second supplement to PHS Publication No. 91, which included references published during 1941-1950. The supplement covers the period 1954-1955, and is arranged in sections which correspond to the various administrative and operational phases of the broad field of refuse collection and disposal. The references have been annotated for increased usability as an aid in the exchange of information in both the research and operational phases of refuse sanitation activities. RECLAMATION OF RE-USABLE WATER FROM SEWAGE.
Progress rept. 15 Sep 62-15 Jul 63,
Rolf Eliassen. 9 Aug 63, 19p
Grant WPD-21-01-63

Descriptors: (*Sewage treatment, Chemical removal (Sewage treatment)), (*Chemical removal (Sewage treatment), *Water reclamation), Activated sludge process.
Identifiers: *Tertiary sewage treatment.

The objective of the project is to demonstrate the feasibility of using tertiary and advanced treatment techniques in the reclamation of water from sewage. The report covers laboratory studies and construction of a pilot scale model at the Palo Alto Sewage Treatment Plant.

UMPQUA RIVER AREA (OREGON): PRELIMINARY ESTIMATE OF ECONOMIC GROWTH, 1960-2010.

Oct 61, 10p

Descriptors: (*Umpqua River Basin, *Economic development), (*Oregon, Economic development), Columbia River Basin.
Identifiers: *Douglas County (Oregon).

The paper is intended to provide a preliminary estimate of the economic potentials and a broad guide to the anticipated growth of the subject area. The paper is intended only as an initial estimate of the outlook for the Umpqua River area. Subsequently, in connection with the Columbia basin study, an analysis will be made, on an industry-by-industry basis, of the growth potential in such subbasins as the Umpqua. At that time, this preliminary estimate for the Umpqua area will be reviewed, and revised if necessary. (Author)

REPORT FOR CONSULTATION ON THE METROPOLITAN OMAHA INTERSTATE AIR QUALITY CONTROL REGION (NEBRASKA AND IOWA).

Mar 70, 74p APTD-1187

Descriptors: (*Air pollution, *Nebraska), (*Air pollution, *Iowa).
Identifiers: *Omaha (Nebraska), *Air quality data.

The Clean Air Act requires the designation of 'air quality control regions' prior to the adaptation of air quality standards and plans for implementation of the standards. A study was thus conducted of the Omaha Metropolitan Area covering parts of both Nebraska and Iowa. The results of the study are presented in the report. It consists of a description of the region, an emission inventory, meteorology, and urban factors.

POLLUTION OF THE WATERS OF THE GRAND CALUMET RIVER, LITTLE CALUMET RIVER, CALUMET RIVER, LAKE MICHIGAN, WOLF LAKE AND THEIR TRIBUTARIES. ILLINOIS - INDIANA.

Feb 65, 96p

Descriptors: (*Calumet River, *Water pollution), (*Lake Michigan, *Water pollution), (*Illinois, Water pollution).
Identifiers: *Water quality data.

A technical report is made on interstate pollution problems in the Calumet area, Indiana and Illinois. The waters under consideration are the Grand Calumet River, Little Calumet River, Calumet River, Lake Michigan, Wolf Lake and their tributaries. Findings are based on data obtained from State, local, and sanitary district records, industries, and sampling by the Public Health Service. The report considers the quality characeristics of the waters as they exist in 1965, evaluates the effects of waste discharges on the water quality and water uses, and summarizes the principal problems and needed corrections.

BIOLOGY. A TECHNICAL REPORT CONTAINING BACKGROUND DATA FOR A WATER POLLUTION CONTROL PROGRAM.

Jan 68, 44p

Descriptors: (*Lake Michigan, *Biological surveys), (*Water pollution, Lake Michigan), Indicator species, Algae, Worms, Diptera, Limnology, Organic wastes, Phytoplankton.

Presented is a study of the biology of the Lake Michigan Basin. The biota of the mid-water area was found to reflect an unpolluted environment. Extensive inshore areas of pollution totaling 3,475 square miles were found along the entire southern perimeter of Lake Michigan specifically Milwaukee, Racine and Chicago-Calumet and in Green Bay. The loss of the Green Bay fly, a fish food organism, and other detrimental pollution associated conditions have impaired commercial fishing in Green Bay. Other more localized inshore areas of pollution totaling 350 square miles resulted in increased sludgeworms and free floating algal populations offshore. Pollution of inshore areas: PRODUCED DENSE GROWTHS OF ATTACHED ALGAE IN SHALLOW WATER AREAS THAT BREAK LOOSE AND BECOME DEPOSITED ON SWIMMING BEACHES.

LAKE LANIER POLLUTION SURVEY - LIMESTONE AND BALUS CREEKS. SUMMARY AND CONCLUSIONS.
Memorandum interim rept.
Feb 56, 49p

Descriptors: (*Water pollution, *Georgia), Lake Lanier.
Identifiers: *Water quality data, *Hall County (Georgia).

Surveys of pollution of Limestone Creek below the Pacolet Manufacturing Company sewage and textile waste treatment plant at New Holland, Georgia and of Balus Creek below the Chicopee Manufacturing Corporation textile-finishing plant at Chicopee, Georgia, were made during February 8 through 15, 1956. The purpose of the surveys were to: Establish the extent of present pollution as relating to present waste disposal methods by the two mills, and provide a factual basis for views regarding the probable extent of pollution after backwater from Lake Lanier on Chattahoochee River covers the lower sections of the two creeks.

THE EFFECT OF IRRIGATION RETURN WATER ON THE BENTHIC MACROINVERTEBRATES OF THE LOST RIVER OREGON--CALIFORNIA.
Technical paper no. 2.

1969, 35P

Descriptors: (*Toxicology, Water pollution), (*Lost River, *Water pollution), (*Irrigation, Water pollution), (*California, Water pollution), (*Oregon, Water pollution), Invertebrates.
Identifiers: *Return flow, *Water pollution effects (Animals).

A survey of the benthic macroinvertebrates was made on the Lost River system to determine the effects of irrigation return water on these organisms. The survey was part of an overall investigation to determine the causes of past extensive wildfowl kills on the Tule Lake and Lower Klamath National Wildlife Refuges located within the Lost River system. One objective was to determine the effects of nutrients originating from agricultural land drainage upon recreation, water

supply and Federal wetlands and wildlife management areas.

FURTHER INVESTIGATION INTO THE WATER QUALITY PARAMETERS USED IN THE LOWER KANSAS RIVER BASIN MODEL,
Walter J. O'Brien, and Ernest E. Angino. Jun 68, 194p
Contract DI-14-12-58

Descriptors: (*Kansas River, *Water pollution), (*Kansas, Water pollution), Mathematical models, Computer programs.
Identifiers: *Water quality data.

A modification of the discharge translation procedure used in the Lower Kansas River quality model is presented. The conservative water quality vectors used in the model have also been refined to produce improved correlation between the predicted and observed concentrations of chloride, sulfate, calcium, and magnesium as a function of the discharge in the river system. A method for predicting the percentage composition and the concentration of conservative parameters in the reservoirs of the region from pre-impoundment water quality data is presented. The non-conservative and the temperature data available on the region are also summarized in a form suitable for use in the model.

CATION TOXICITY AND STIMULATION IN ANAEROBIC WASTE TREATMENT. II: DAILY FEED STUDIES,
Irwin J. Kugelman, and Perry L. McCarty. 1964, 31p
Presented at the Annual Purdue Industrial Waste Treatment Conference (19th), Lafayette, Ind. 6 May 64.

Descriptors: (*Sewage treatment, Anaerobic processes), (*Microorganism control (Sewage), *Anaerobic processes), Trace elements.

One fundamental principle which waste water treatment research has brought forth is that optimum efficiency in a biological waste treatment system can be attained only when the microorganisms functioning in the process are provided with an optimum environment. In the future, biological waste treatment systems will be called upon more to handle wastes of an entirely different nature from that of domestic sewage sludge. In order to prepare for these future conditions, a basic investigation of cation effects in the anaerobic waste treatment process was undertaken.

RETURN IRRIGATION WATER. CHARACTERISTICS AND EFFECTS,
Edward F. Eldridge. 1 May 60, 129p

Descriptors: (*Water pollution, Irrigation), (*Irrigation, *Water quality), Minerals, Turbidity, Aquatic biology, Inorganic nitrates, Bacteria, Water supply, Salinity, Temperature, Nutrients, Odors, Inorganic phosphates, Chemical composition.
Identifiers: *Return flow, Water quality data.

The paper documents that return irrigation water is a major factor affecting the quality of surface and ground waters. The report discussed the quantity and quality of the water required for irrigation, the disposition and use of this water, the factors influencing the quantity and quality of the water returned to surface or ground supplies, and the effects of this return flow on further use of the supplies in a complex of multiple uses. The investigation has shown that the potential water quality problems involve changes in salinity and hardness, temperature, turbidity, nutrients and aquatic growths, odor and taste, nitrates, and sanitary quality. Each of these factors is developed and documented and the actual and potential effects on water uses are analyzed. The major water uses considered are domestic and industrial water supply, fisheries, recreation and irrigation.

BLACK-WATER IMPOUNDMENT INVESTIGATIONS,
Richard W. Warner, R. Kent Ballentine, and Lowell E. Keup. 1969, 99p

Descriptors: (*Reservoirs, *Northeast Cape Fear River), (*North Carolina, Reservoirs), Water quality.
Identifiers: *Duplin County (North Carolina).

In late July and early August, 1968, a study was conducted to predict the quality of Northeast Cape Fear River waters to be impounded in Kornegay Reservoir, Duplin County, North Carolina. This study was requested by the Corps of Engineers because the highly colored river water will inundate rich organic soils and vegetation that may leach undesirable materials and affect water quality adversely for fish propagation, wildlife, flow augmentation, water supply, and recreation. To assess the magnitude of the problem and to predict the effects of removal of vegetation and soils from the reservoir site, chemical and biological conditions of the Northeast Cape Fear River were compared with those of two small reservoirs with highly colored influents near Wilson, N. C.

Industrial waste survey rept. 4 Feb-28 Feb 52,
Virgil A. Minch, and Robert L. Harris. 28 Feb 52, 61p

Descriptors: (*Wood products, *Industrial wastes), (*Water pollution, Wood products).
Identifiers: *Wood processing industry.

The liquid waste directly resulting from the wood pyrolysis is known as pyroligneous acid liquor and is an extremely complex mixture containing at least 35 identifiable organic compounds, many of which are water soluble. It is a dark red-brown liquid having a strong acid reaction and a peculiar

empyreumatic odor. The yield of pyroligneous acid liquor from softwood distillation is 50 to 60 per cent of the weight of the wood processed. The volume at the plant amounted to 15,000 gallons per day. This waste has limited uses as a disinfectant, weed killer, and meat curing agent, but probably accounts for less than 2 per cent of the total production. The largest percentage goes to waste. The only other waste associated with the destructive distillation process is condenser cooling water. (Author)

PRELIMINARY DESIGN AND SIMULATION OF CONVENTIONAL WASTEWATER RENOVATION SYSTEMS USING THE DIGITAL COMPUTER.
Water pollution control research series,
Robert Smith. Mar 68, 129p WP-20-9

Descriptors: (*Sewage treatment, *Cost analysis), Design, Computer programs.

Over the past 50 years extensive research has been conducted by universities, equipment manufacturers, and governmental agencies to delineate the physical, chemical, and biological relationships which govern the operation of wastewater treatment processes. The literature on the performance of the individual processes is voluminous but the techniques for calculating the performance of groups of processes working together as a system are limited. The report is an effort to bring together in one computational scheme the significant cost and performance relationships for the processes and to attempt to calculate the performance and cost of the system as a whole, based on relationships which have been developed for the processes individually. DEMONSTRATION OF A FULL-SCALE WASTE TREATMENT SYSTEM FOR A CANNERY.
Water pollution control research series,
Leale E. Streebin, George W. Reid, and Alan C. H. Hu. Sep 71, 184p EPA-12060-DSB-09/71
Paper copy available from GPO $1.50 as EPI.16:12060DSB-09/71.

Descriptors: (*Food processing, *Industrial waste treatment), (*Canneries, Industrial waste treatment), Activated sludge process, Aeration, Sludge digestion, Design criteria, Performance evaluation, Cost estimates, Capitalized costs, Operating costs.
Identifiers: *Water pollution control, *Fruit processing, Potato processing, *Vegetable processing, Biological industrial waste treatment.

The objectives in the study were to determine the removal efficiencies of a two-stage aerobic biological treatment system while processing high strength, large volume, nutritionally unbalanced cannery wastes, and to determine the waste characteristics resulting from the processing of a wide variety of fruits and vegetables. The system was studied over one operating season and data collected on the removal efficiencies of each unit process in the system. The treatment system performed more efficiently than expected in the design assumptions. Removal efficiencies of greater than 95% were obtained for most of the processing season, even though because of plant expansion the organic and hydraulic load was higher than expected.

Descriptors: (*Illinois, *Biological surveys), Lincoln Lake, Reservoirs, Benthos, Plankton, Fishes.
Identifiers: *Baseline measurements, *Coles County (Illinois).

Field and laboratory studies were carried out on 20 streams in Coles County, Illinois from 1967 through 1970. A large reservoir (Lincoln Lake) is planned by the Army Corps of Engineers and, if completed, will have considerable impact on Coles County. A record of existing conditions was desired in order to help determine the effects of the reservoir in the area. Studies were made of the bottom fauna, plankton, and fishes in the streams. Physical and chemical characteristics such as pH, hardness, dissolved oxygen, turbidity, nitrites, nitrates, phosphates, sulfates, and carbon dioxide were also measured. (Author)

THE WATER SUPPLY AND WATER POLLUTION PROGRAM OF THE ROBERT A. TAFT SANITARY ENGINEERING CENTER,
Bernard B. Berger. 1957, 18p
Presented at Annual Water Symposium (6th), Louisiana State University, Baton Rouge, Louisiana, February 20, 1957.

Descriptors: (*Water pollution, Research).

The work of the Robert A. Taft Sanitary Engineering Center is concerned with the effects on public health and well-being of contaminated air, water, and food, and of radioactivity. In each of these areas, three basic activities are conducted: research, technical assistance, and training. The report describes the Center's program in the water phase of the environment. (Author)

REPORT OF SUPPLEMENTAL SURVEY, NORTH PLATTE RIVER, TORRINGTON, WYOMING, BRIDGEPORT, NEBRASKA, OCTOBER 14-26, 1963.
1963, 24p

Descriptors: (*Platte River Basin, *Water pollution), (*Wyoming, Water pollution), (*Nebraska, Water pollution).
Identifiers: *Water quality data.

The purpose of the survey was to determine the source of the high bacteriological concentration found in the interstate reach of the North Platte River, to up-date chemical and biological data pertaining to this reach of the river, and to evaluate effectiveness of waste treatment facilities installed since the survey of November-December 1962.

WATER QUALITY, MIDDLE BASIN TRIBUTARY STREAMS, SOUTH PLATTE RIVER BASIN, SUMMER 1965.

Dec 67, 69p PR-7

Descriptors: (*Cache la Poudre River, *Water pollution), (*Colorado, Water pollution), Platte River Basin.
Identifiers: *Water quality data.

The primary objectives of the study were to: Develop knowledge of the water quality in the Cache la Poudre River, Big Thompson River, and St. Vrain Creek sub-basins during the summer months; Evaluate water quality in terms of present and future water uses; Determine water quality control needs. It was important to determine water quality during a time when beet sugar factories were not operating; the masking effects of beet sugar wastes could be eliminated and other causes and effects analyzed.

EVALUATION OF AN OXIDATION-DITCH WASTEWATER TREATMENT PLANT IN SUB-ARCTIC ALASKA.
Progress rept. 15 Jun 67-15 May 68,
R. Sage Murphy. 20 May 68, 12p
Grant WPD-207-01-67

Descriptors: (*Sewage treatment, Cold weather operations), (*Lagoons (Ponds), *Cold weather operations), Channels (Waterways).
Identifiers: *Aeration ponds.

The paper presents the progress made at the oxidation-ditch wastewater treatment plant in sub-arctic Alaska. The facility was inundated during the disastrous Fairbanks flood of August 15, 1967. Restarting the plant was performed soon thereafter and this report covers only that period until May 15, 1968. Consistent Biochemical Oxygen Demand removals in excess of 90 percent were achieved even when liquid temperatures as low as 2C were prevalent. No mechanical failures could be attributable to the cold environment when average air temperatures of -49C lasted for ten days. Nitrification by the activated sludge was completely inhibited at liquid temperatures below 10C.

EFFECTS OF AEROSOLS IN THE COMMUNITY ATMOSPHERE,
David M. Anderson. 10 Mar 59, 19p

Descriptors: (*Air pollution, *Aerosols), (*Public health, Air pollution), Reviews, Particles.

The discussion is mainly concerned with the effects of aerosols in the community atmosphere as distinguished from the occupational environment. Research in the latter area, however, at present constitutes our only knowledge for many biological effects. Material has been gathered from a literature review of some 60 sources and is presented in summary style. The subjects considered are the biological, physical and economic effects of atmospheric pollutant aerosols, referring only to the particulate phase, either solid or liquid. Consideration is given to the possible carrier and/or catalytic nature of particulates which sometimes may account for the detrimental effects attributed to the aerosol, in both biological and physical systems. STUDIES OF BATHING WATER QUALITY AND HEALTH,
Albert H. Stevenson. 1952, 14p

Presented at Session of the Engineering Section of the American Public Health Association (2nd) at the Annual Meeting (80th) in Cleveland, Ohio, October 23, 1952.

Descriptors: (*Water pollution, *Swimming), (*Lake Michigan, Water pollution), (*Ohio River, Water pollution), (*Long Island Sound, Water pollution), (*Publicc health, Swimming), Epidemiology, Infections, Bacteriology, Environmental surveys, Beaches, Kentucky, Illinois, New York.
Identifiers: Dayton (Kentucky).

In an attempt to determine the relationship between natural bathing water quality and its effect upon the health of the bather, a series of field studies were recently undertaken. The specific objectives of the studies were: to determine what frequency of swimming might be expected from the population groups chosen; to determine what relative increase in illness incidence might be expected from swimming in even the cleanest waters; and to determine what differences in illness incidence might be expected from swimming in waters containing various degrees of bacterial pollution. The studies were conducted on Lake Michigan at Chicago, Illinois; the Ohio River at Dayton, Kentucky, and a nearby swimming pool in the same area; and finally Long Island Sound at New Rochelle and Mamaroneck, New York.

THE USE OF ULTRAVIOLET ABSORBANCE FOR MONITORING THE TOTAL ORGANIC CARBON CONTENT OF WATER AND WASTEWATER,
Richard A. Dobbs, Robert H. Wise, and Robert B. Dean. May 69, 23p

Descriptors: (*Dissolved organic matter, *Water analysis), Ultraviolet spectra, Absorptivity, Carbon, Monitors.
Identifiers: *Water pollution detection, *Total organic carbon.

The correlation between ultraviolet absorbance at 254 micrometer (A (254 micrometer)) and total organic carbon (TOC) content has been determined for a variety of treated and untreated water samples. These samples ranged from municipal secondary sewage effluent and river water to municipal tap water. High correlation coefficients were obtained for water samples which contained sufficient organic carbon to permit accurate TOC determinations. Predictably, systems with low TOC levels yielded lower correlation coefficients. However, even with the lower correlation coefficients, absorbance measurements can still be used to monitor a process stream for its organic carbon content if interferences from turbidity do not exceed certain limits. BIOLOGICAL INVESTIGATION, YAKIMA RIVER, SEPTEMBER, 1961.

28 Feb 62, 11p Working Paper-13
Report on Columbia River Basin Project for Water Supply and Water Quality Management.

Descriptors: (*Yakima River, Biological surveys), (*Washington (State), Water pollution).

As a part of a more comprehensive investigation of the Yakima River, including physical, chemical and biochemical tests, a biological investigation was made. To determine the effects of pollution and the addition of nutrients to the waters of the Yakima River upon the drifting microscopic plants and animals, three nannoplankton samples were collected and analyzed in the laboratory. Collections of bottom fauna, primarily insects, were made at six stations in the Cle Elum to Kiona reach of the main stem Yakima River on September 14 and 21, 1961. The complete record is presented.

A STUDY OF NOVEL ION EXCHANGE RESINS AND ELECTRODIALYSIS IN THE REMOVAL OF CONTAMINANTS FROM WASTE WATERS.
Interim rept. 1 Jul 61-30 Jun 62,
John L. Eisenmann, J. Douglas Smith, and Harvey Chew. 1962, 63p
Contract SAph-76690

Descriptors: (*Electrodialysis, *Surfactants), (*Ion exchange resins, Electrodialysis), (*Water treatment, Electrodialysis).
Identifiers: *Benzene sulfonates.

A novel electrodialysis ion exchange resin in particulate form has been developed which displays an alkylbenzene sulfonates sorptive capacity superior to that of any of the presently available commercial ion exchange resins tested. Novel ion exchange membranes have been developed which display porosities superior to those of commercially available ion exchange membranes tested. To a limited extent, these novel membranes permit the passage of large organic molecules, such as ABS, under electrodialytic conditions. Experimentation in the renovation of waste water by means of electrodialysis is shown.

LIQUID ION EXCHANGE IN FOAM PURIFICATION.
Final rept.,
Sallie A. Fisher. 15 Apr 64, 33p
Contract PH-86-63-93

Descriptors: (*Sewage treatment, *Flotation), (*Industrial waste treatment, *Flotation), Ion exchange resins.
Identifiers: *Bubble separation, *Water pollution control.

The report discusses a project undertaken to screen commercially available water insoluble liquid ion exchange material to determine their efficacy as scavangers for small amounts of organic materials in water using a foaming technique. These materials (anionic, cationic were atomized at low levels into the gas used to produce a foam. A total of 12 water-insoluble liquids containing different types and degrees of ionic functionality were screened for their ability to remove phenols. Among the materials tested, the greatest efficiency was found with the use ofDuomeen TMO, Tallow 1, 3 propylamine diamine monoleate.

LOWER MISSOURI RIVER BASIN WATER POLLUTION INVESTIGATION. A COOPERATIVE STATE-FEDERAL REPORT ON WATER POLLUTION.
Water pollution series.

Oct 52, 192p PHS-Pub-269, PHS-WPS-47
Prepared in cooperation with the Departments of Health of Iowa, Nebraska, Minnesota and South Dakota, the Missouri Division of Health, and the Kansas Board of Health.

Descriptors: (*Missouri River Basin, *Water pollution), (*Nebraska, Water pollution), (*Missouri, Water pollution), (*Kansas, Water pollution), (*South Dakota, Water pollution).

The Lower Missouri Basin encompasses that region drained by the Missouri River and minor tributaries between the Niobrara and the Mississippi Rivers. The area is about 640 miles in length, 140 miles in maximum width, and 40,970 square miles in area, including parts of the States of Iowa, Kansas, Minnesota, Missouri, Nebraska, and South Dakota. The region considered in this report generally has sufficient water for most uses, and frequently has too much water. The land and water resources conservation program will retain flood flows for beneficial use and, with ultimate development, will control and increase discharge in the Missouri River during periods of low flow. A study of sources of pollution and their effects on the main stem of the Missouri River as detected by physical, chemical, biochemical and bacteriological tests is reported.

SOUTH PLATTE RIVER BASIN RIVER MILEAGE INDEX.
Sep 66, 34p PR-1

Descriptors: (*Platte River Basin, Metrology).

The publication provides a method of indexing points along the main-stem South Platte River and its tributary streams. The objectives were a single procedure for the identification of point locations pertinent to data collection and a single coding system for the identification of specific parameters of water quality. The first part consists of main-stem and tributary stream mileages and includes important hydraulic features within the study area. The second part gives the river mileage locations of all established communities and cities in the State of Colorado within the confines of the South Platte River Basin.

GUIDELINES FOR THE DEVELOPMENT OF AIR QUALITY STANDARDS AND IMPLEMENTATION PLANS.
May 69, 62p
Report of the Committee on Public Works, United States Senate, July 15, 1967.

Descriptors: (*Air pollution, *Regulations), (*State government, Air pollution).

The Air Quality Act of 1967 (Public Law 90-148) provided for an intergovernmental system for the prevention and control of air pollution on a regional basis. To put this system into operation, the Department of Health, Education, and Welfare must designate air quality control regions and issue air quality criteria and reports on control techniques. State governments then are expected to establish air quality standards for the air quality control regions and to adopt plans for implementation of the standards. The purpose of this document is to furnish State governments guidance in performing the functions assigned to them under the Act.

INTERSTATE AIR POLLUTION STUDY PHASE II PROJECT REPORT. VIII. A PROPOSAL FOR AN AIR RESOURCE MANAGEMENT PROGRAM,
J. D. Williams, G. Ozolins, J. W. Sadler, and J. R. Farmer. May 67, 140p

Descriptors: (*Air pollution, *Regional planning), (*Missouri, Air pollution), (*Illinois, Air pollution), Standards.
Identifiers: *Saint Louis (Missouri), *Air pollution standards.

This report is devoted to the development of air-use plans for each of the major air pollutants found in the St. Louis urbanized area. An air-use plan may be thought of as a link between the pollutant emissions of a community and the air-quality goals. The overall function of these plans is to optimize the use of the air by considering the amounts, configurations, and locations of the sources and the dilution capability of the air basin. The air-use plans may be used as the basic framework for achieving the desired air quality by such means as limiting the emissions from individual sources, limiting the emissions from sources in certain areas, or even disallowing new pollutant sources in overburdened areas. The air-use plans thus provide the bases for enacting control regulations and serve as a guide for future planning activities.

DETERMINATION OF THE TOXICITY OF TRIVALENT AND HEXAVALENT CHROMIUM ON THE OXYGEN UTILIZATION OF SEWAGE.
H. L. Krieger, and W. Allan Moore. 1949, 9p

Descriptors: (*Chromium, *Sewage treatment), (*Biochemical oxygen demand, *Trace elements).

Although the toxic effect of a metal such as chromium on the normal B.O.D. of domestic sewage has been discussed before, sufficient information was desired in order to make a comparison of the oxygen utilization of the sewage without the chromium salts with those of increasing concentrations of chromium salts in terms of p.p.m. of dissolved oxygen depletions. The toxicity of both hexavalent and trivalent chromium has been observed in this experiment. The trivalent form showed the more consistent inhibition as the chromium concentration was increased. The hexavalent chromium reached a plateau in its effect on the B.O.D. of sewage when its concentration was 3.0 p.p.m., and further increases to 10 p.p.m. had no significant effect on the inhibition.

Sep 70, 50p

Descriptors: (*Sewage treatment, Standards), Sewers, Regulations.

The paper contains guidelines intended to supplement existing references such as the Recommended Standards for Sewage Works: Great Lakes-Upper Mississippi River Board of State Sanitary Engineers (the Ten State Standards), the ASCE Manuals Number 36 and 37 (WPCF Manuals 8 and 9), and applicable State standards and guidelines. All water pollution control projects which are submitted for FWQA construction grants will be required to conform to these Guidelines and future Technical Bulletins, as well as to applicable State requirements.

EVALUATION OF EXTERNAL SEALING METHOD TO REDUCE STORM FLOW EFFECTS INSEWERAGE SYSTEMS.
Final progress rept.,
Donald B. Head. 1968, 121p

Grant WPD-111-01-66
See also Appendix PB-216 237.

Descriptors: (*Sewers, *Sealing), (*Fluid infiltration, Sewers), (*Overflows, Fluid infiltration).
Identifiers: *Storm water runoff.

Infiltration problems are common to many communities throughout the United States. Designing collection systems which can adequately collect and transport sanitary sewage depends not only on the quantity of sanitary sewage to be handled but also upon the quantity of storm and ground water infiltration which must be anticipated. The report is confined to the sealing of sanitary sewage collection systems. It is the intent of the study and report to describe the use of an external application of asphaltic sealants in several different localities. By actually sealing leaking lines in areas of differing soil characteristics and in systems which employ differing pipe and jointing methods, it has been possible to include a sufficient variety of conditions to approximate conditions common to many communities in the United States.

AN EVALUATION OF SALMONID HATCHERY WASTES,
Danforth G. Bodien. Oct 70, 53p

Descriptors: (*Aquaculture, *Industrial waste treatment), (*Water pollution, *Industrial wastes), Salmon, Oregon.
Identifiers: *Fish hatcheries, *Water pollution control.

The study area included the States of Idaho, Oregon, Washington and western Montana. Primary attention was given to four hatcheries which were selected as representative of hatcheries in the study area, Eagle Creek National Fish Hatchery, near Estacada, Oregon; Abernathy Creek Salmon Cultural Laboratory, near Longview, Washington; Little White Salmon National Fish Hatchery, near White Salmon, Washington; and Dworshak National Fish Hatchery at Asahka, Idaho. The objectives of the study were to determine total waste load, waste characteristics, and methods for controlling fish hatchery wastes.

PERSISTENCE OF MONO-CHLOROPHENOLS IN POLLUTED RIVER WATER AND SEWAGE DILUTIONS,
M. B. Ettinger, and C. C. Ruchhoft. 10 Jun 50, 11p
Presented at the Central States Sewage Works Association Annual Meeting, Indianapolis, Indiana, June 9-10, 1950.

Descriptors: (*Phenols, *Biodeterioration), (*Chlorine aromatic compounds, Biodeterioration), (*Water pollution, Phenols), Sewage.
Identifiers: *Phenol/chloro, *Self purification.

It has been shown that low concentrations (1,000 p.p.b.) of ortho and para-chlorophenol, when added to the ordinary dilutions of domestic sewage, were not always removed in periods of 20 to 30 days at 20C. Similar concentrations of these mono-chlorophenols were removed at this temperature during similar periods of storage when added to polluted surface waters. These observations on the conditions required for the dissipation of mono-chlorophenols in surface waters and sewage dilutions along with previous observations on the similar dissipation of cresols and phenol indicate that biochemical dissimilation is responsible for the removal of these materials. The study has also shown that the removal of these mono-chlorophenols requires the presence of a specialized microflora.

Federal Water Pollution Control Administration, Edison, N.J. North Atlantic Water Quality Management Center.
EVALUATION OF MACERATOR-CHLORINATORS ON U.S. COAST GUARD VESSELS.

Jun 68, 51p CWT-10-1

Descriptors: (*Sewage treatment, *Ships), Disinfection, Chlorination, Grinders.
Identifiers: *Shipboard sewage treatment systems.

The North Atlantic Water Quality Management Center undertook an investigation to evaluate the operation of the Carlson, C-Chlor, Mark 10, macerator-chlorinator unit installed aboard U. S. Coast Guard vessels in the New York area. The treatment facilities were installed by the Coast Guard in accordance with a schedule agreed upon by FWPCA. The investigating program, which was dependent upon vessel availability, was designed to: Test the units under actual operating conditions, specially during maximum use periods when detention time in the macerator would be at a minimum; Determine the mechanical reliability of the treatment device; Ascertain the degree of treatment provided and the effectiveness of the system in reducing pollution.

REPORT ON BACTERIOLOGICAL POLLUTION FROM MUNICIPAL AND INDUSTRIAL WASTE DISCHARGES ON THE RED RIVER OF THE NORTH.

Feb 66, 62p
Errata sheet inserted.

Descriptors: (*Red River of the North, *Water pollution), (*Minnesota, Water pollution), (*North Dakota, Water pollution), Bacteria, Sewage.
Identifiers: *Water quality data.

On September 14, 1965, a Conference attended by representatives of the states of Minnesota and North Dakota and Department of Health, Education, and Welfare was held to evaluate the effects of pollution on the interstate waters of the Red River of the North, and to recommend abatement action if such pollution could be demonstrated. The representative of North Dakota expressed a desire to ascertain the degree of bacteriological pollution from each of the sources listed in the Federal report, and recommended further study to pinpoint the extremely high bacterial densities in the river, so that effective remedial action might be taken. The request resulted in the bacteriological survey presented here.

WATER CYANIDES NUMBER 1.
Environmental health series,
Raymond J. Lishka, Laurella A. Lederer, and Earl F. McFarren. 1967, 55p PHS Pub-999-UIH-4, PHS-ARS-Study-29
Report of a study conducted by the Analytical Reference Service.

Descriptors: (*Cyanides, *Water analysis), Standards, Accuracy.
Identifiers: *Water pollution detection.

The objective of the study was to evaluate the ability of the distillation, titrimetric, and colorimetric procedures offered in Standard Methods to quantitatively measure both simple and complex cyanides in water. In the study each participant was shipped three concentrated solutions in sterile, sealed, glass ampoules. On receipt they were instructed to dilute 5 ml of each sample to 1 liter with a good qaulity distilled water and to analyze each sample to 1 liter with a good quality distilled water and to analyze each sample by each of two standard methods, copies of which were provided. In view of the drinking water limitation of 0.01 mg per liter of cyanide, these results indicate the need for an improved method.

WATER FLUORIDE NUMBER 3.
Earl F. McFarren, B. J. Moorman, and J. H. Parker. 1969, 71p PHS-Pub-1895, PHS-ARS-Study-33

Descriptors: (*Water analysis, *Fluorides), Potentiometric analysis, Ion exchanging, Accuracy, Comparisons.
Identifiers: *Water pollution detection, *Ion selective electrodes.

The constantly increasing number of communities fluoridating their water supplies has made the measurement of fluoride a routine analysis in many laboratories. Since strict control of the con-

centration of fluoride is required, and most of the currently used methods of analysis are sensitive to interferences commonly encountered in surface waters, better methods of analysis have been sought. It was determined that at least two were worthy of collaborative study: the fluoride electrode and the ion-exchange methods. The lanthanum alizarin complexone method also was investigated and found to be useful for high salinity waters but not for ordinary waters. In this report the results obtained on analysis of three water samples for fluoride by an electrode method, an ion-exchange method and a modified electrode method are compared.

DETERMINATION OF FORMALDEHYDE BY THE CHROMOTROPIC ACID METHOD,
Aubrey P. Altshuller, David L. Miller, and Stanley F. Sleva. 1960, 23p

Descriptors: (*Formaldehyde, *Colorimetic analysis), (*Gas analysis, Formaldehyde).
Identifiers: *Air pollution detection, *Naphthalene disulfonic acid/dihydroxy.

Large quantities of formaldehyde are produced both by combustion sources such as automobile exhaust and by photooxidation reactions in the atmosphere. It has been suggested that formaldehyde is likely to be a factor in eye irritation by Los Angeles type smog. Consequently, there is much interest in the accurate microdetermination of formaldehyde in the atmosphere. One reagent proposed for the analysis of formaldehyde is chromotropic acid (1,8-dihydroxynaphthalene-3,6-disulfonic acid). The report discusses the use of this substance for the purpose.

WATER POLLUTION ASPECTS OF URBAN RUNOFF.
Water pollution control series.

Jan 69, 271p FWPCA-11030-DNS-01/69

Descriptors: (*Water pollution, *Surface water runoff), (*Urban areas, Surface water runoff), Solids, Streets, Refuse, Sources, Air pollution, Catch basins, Sewers, Sediments.
Identifiers: *Storm water runoff, Urban hydrology, Water pollution abatement.

Analysis and evaluation of environmental pollution factors and their potential pollutional effects resulting from the water-wastes interfacial contracts during precipitation and runoff. Factors studied included, street refuse and litter, catch basins, environmentally used chemicals, contributions from air pollution and its control, and sewer solids deposition. Street refuse found to be significant to pollution load. Pollution load measured in terms of BOD is estimated in terms of average daily load, and in terms of the shock pollution load on the receiving body of water. Findings and Recommendations are presented in summary form. Comprehensive set of typical ordinances regarding possible sources of pollution included. (Author)

THE EFFECT OF SMALL SURFACE WAVES ON INTERFACIAL MASS TRANSFER.
Research rept.,
Kurt Muenz. 1965, 142p
Grant PHS-WP-00323

Descriptors: (*Air water interactions, Mass transfer), (*Dissolved gases, *Mass transfer), Oxygen, Carbon dioxide, Hydrocarbons, Helium, Solubility, Mathematical models.

A quantitative experimental program, to determine the effects of small surface waves on interfacial mass transfer was undertaken. In addition, pertinent mass transfer and hydrodynamic theory is presented and discussed. The particular scheme explored is that of transfer from the gas phase into a liquid (absorption), with water as the liquid throughout all experiments. The substances absorbed were Oxygen, Helium, Carbon Dioxide and Propylene. They were present as essentially pure gases. Small amplitude, progressive two dimensional waves were mechanically generated at the liquid surface. For each system, control experiments with non-waved surfaces were also carried out. Unsteady state runs were made and total gas absorbed was measured with time. (Author)

INTERSTATE AIR POLLUTION STUDY. PHASE II PROJECT REPORT. III. AIR QUALITY MEASUREMENTS,
J. R. Farmer, and J. D. Williams. Dec 66, 191p

Descriptors: (*Air pollution, *Missouri).
Identifiers: *Saint Louis (Missouri), *Air quality data.

The development of an effective air resource management program begins with identification of the pollutants in the air, and determination of the quantity and origin of each type. The air quality measurement program was designed and operated to make these determinations in the Metropolitan St. Louis area. Once the physical aspects of the air pollution problem are defined, air-pollution-effect data and criteria as well as opinion surveys can be used to set the air quality goals. In addition to its use in the air resource management program, the report provides a reasonably complete list of air quality data in a form that will assist research and program personnel in developing activities and attaining program objectives. A population distribution map of the Study area, is provided to allow comparison between distribution of population, pollutants, and sampling measurement networks.

ANALYSIS OF CYANIDE IN WATER AND WASTE SAMPLES,
F. J. Ludzack, W. A. Moore, and C. C. Ruchhoft.
Mar 53, 18p

Descriptors: (*Cyanides, *Water analysis).
Identifiers: *Water pollution detection.

The presence of cyanide in water has a significant effect upon the biological activity of the system. Most cyanide compounds are highly reactive. The analytical procedures used for their estimation are not specific; therefore the major problem is that of isolation from interferences. Although many procedures for the analysis of cyanide have been published, relatively few of these are satisfactory for general use in water and industrial waste analysis. The procedures described were selected because they are applicable for many types of samples. The methods were found effective on relatively pure water, river water, sewage and several industrial wastes, including those from gas and coke operation, petroleum refining, and plating.

APPLICATION OF ELECTRONIC PROCESSING TO AIR QUALITY DATA,
Arthur C. Stern. 1957, 15p
Presented at the Semi-Annual Technical Conference, Air Pollution Control Association, Fairmont Hotel, San Francisco, California, November 18-19, 1957.

Descriptors: (*Data processing, *Air pollution).

Because of the large amount of air quality data being accumulated by the National Air Sampling Network (NASN) of the United States Public Health Service, it became evident that electronic processing methods would have to be developed for data interpretation and analysis. When finally developed, it was apparent that these methods would also be useful for analysis of air quality data resulting from air sampling by state and local air pollution control agencies and by research and industrial groups. The purpose of the paper is to describe the forms of computed data output and their interpretation so that other agencies can determine whether this technique would be useful to them.

REPORT ON INTERSTATE AIR POLLUTION IN THE SHOREHAM, VERMONT - TICONDEROGA, NEW YORK, AREA.

Nov 65, 35p

Descriptors: (*Paper industry, Air pollution), (*Air pollution, *New York), (*Vermont, *Air pollution).
Identifiers: *Ticonderga (New York), *Shoreham (Vermont).

This report summarizes the activities undertaken by the Abatement Branch, Division of Air Pollution, Public Health Service, Department of Health, Education, and Welfare, along the following lines: Inspection of the pulp mill operated by the International Paper Company in Ticonderoga, New York; Review of available topographical and meteorological information; and Calculation of emissions, transport and diffusion of odorous materials from the mill site. ECOLOGY OF SPHAEROTILUS IN ACTIVATED SLUDGE.
Annual rept. no. 3,
Wesley O. Pipes. Dec 67, 107p

Descriptors: (*Activated sludge process, *Microorganism control (Sewage)).
Identifiers: *Spaerotilus natans.

Since the inception of the activated sludge process, operating problems have been associated with the growth of excessive numbers of filamentous organisms in the sludge. Since separation of the activated sludge from the effluent by sedimentation is absolutely essential for obtaining proper operation of the process, anything which interfers with the settling of the sludge produces a serious operating problem. Any problem with separation of activated sludge in the secondary settling tank, particularly if large concentrations of sludge solids are being lost into the effluent, may be called 'bulking.' Most of the descriptions of bulking ascribe its cause to an overgrowth of a particular filamentous organism, Sphaerotilus natans. The objective of the research described was to provide data which will serve as a basis for quantitative description of some of the phenomena which produce an activated sludge which separated poorly, to determine which filamentous organisms are associated with which phenomena, and to identify environmental factors in the process which could cause the occurrence of each phenomenon.

PLYWOOD PLANT GLUE WASTES DISPOSAL.
Progress rept.,
Danforth G. Bodien. Feb 68, 56p PR-2

Descriptors: (*Glue, *Industrial waste treatment), (*Plywood, Industrial waste treatment).
Identifiers: *Water pollution control, *Wood processing industry.

In the States of Oregon, Washington, Idaho, Montana, and California, 158 plywood plants generate

an estimated 6.2 million gallons of waste per day from the cleanup of glue mixing equipment and glue spreaders. The waste is toxic and high in pollutional strength. Treatment of these glue wastes varies from plant to plant but generally consists only of solids separation or the removal of suspended matter. The report presents continuing research on the treatment and disposal of the waste.

EFFECTS OF PLACER MINING ON WATER QUALITY IN ALASKA.

Feb 69, 88p

Descriptors: (*Placer mining, *Water pollution), (*Alaska, Water pollution), (*Mining, Water pollution).

The objectives of the study undertaken were to find answers to the following questions: What is the nature and extent of placer mining activities in Alaska. What effects do placer mining operations exert on water quality and water use. What treatment and control methods are presently being used, or could be used, for the control of placer mining wastes. The scope of the study was confined to the State of Alaska. The districts studied were: Fairbanks District; Tolovana District; Iditarod District; Seward Peninsula District; Koyukuk District; Wiseman District.

KANSAS RIVER DRAINAGE BASIN. A COOPERATIVE STATE-FEDERAL REPORT ON WATER POLLUTION.
Water pollution series.
Feb 53, 59p PHS-Pub-234, PHS-WPS-38
Prepared in cooperation with Kansas Board of Health, Nebraska Department of Health, and Colorado Department of Public Health.

Descriptors: (*Kansas River Basin, *Water pollution), (*Kansas, Water pollution), (*Nebraska, Water pollution), (*Colorado, Water pollution).

The report is produced under the cosponsorship of the Colorado Department of Public Health, the Kansas State Board of Health, the Nebraska Department of Health, and the Public Health Service. It is based on data gathered and reported in the Kansas River Basin Water Pollution Investigation Report of 1949 and subsequent information. The report presents data concerning use of water resources, pollution entering water resources and resulting damages, benefits which may result from pollution prevention and abatement, pollution prevention measures in effect, and those needed. A sincere effort has been made to present a picture of the water pollution problems in the Kansas River Basin.

FERTILIZATION AND ALGAE IN LAKE SEBASTICOOK, MAINE.

Jan 66, 131p

Descriptors: (*Lake Sebasticook, *Water pollution), (*Maine, Water pollution), Algae, Nutrients, Sewage, Industrial wastes.
Identifiers: *Water quality data.

The report discusses the algal growths in Lake Sebasticook at Newport, Maine. The algal growths are caused principally by nutrients contained in domestic and industrial plant wastes that are discharged to the East Branch of the Sebasticook River at Dexter and Corinna, Maine. These nutrients produce as much as 9,700,000 pounds of algae as a standing crop within the lake during those days of the year that are optimum for algal development.

TO DEMONSTRATE THE EFFECTIVENESS OF IODINE FOR THE DISINFECTION OF PUBLIC WATER SUPPLIES, AND TO DETERMINE THE PHYSIOLOGICAL EFFECTS ON A HUMAN POPULATION.
Progress rept. no. 4, 1 Nov 65-30 Jun 66,
A. P. Black. 5 Jul 66, 66p
Grant WPD-19-01-66

Descriptors: (*Water treatment, Disinfection), (*Iodination, *Disinfection), Public health.

The water supplies of three state institutions serving approximately 800 individuals in Florida have been continuously iodinated for a period of more than two years under the most careful chemical, bacteriological and physiological controls. One of each of four inmates was selected for medical and physiological tests, a total of 149 subjects. The studies indicate that iodine is fully as effective as chlorine for the disinfection of public water supplies and that it possesses a number of advantages over chlorine when used for that purpose.

CONSTRUCTION AND UTILIZATION OF A SIMPLE DEVICE FOR THE PRODUCTION OF REACTIVATABLE PHOSPHATASE.
Environmental health series,
C. B. Donnelly, J. E. Leslie, J. D. McDaniel, and L. A. Black. 1967, 22p PHS-Pub-999-UIH-5

Descriptors: (*Milk, *Pasteurizing), (*Phosphatases, Milk).

A laboratory-scale device for the heat-treatment of cream, with a capacity of 5 liters per hour, is described. The apparatus consists of a heating coil of small-diameter nylon tubing immersed in a constant-boiling liquid bath, through which milk or cream can be forced at a constant flow rate by air pressure. Cost of materials and labor is estimated at $80.00. Cream heat-treated in the device contained reactivatable phosphatase that was suitable for testing an analyst's ability to detect reactivated phosphatase. Such heat-treated products have been used successfully in a national split-sample program. (Author)

WASTES FROM THE POULTRY PROCESSING INDUSTRY.
Technical rept.,
Ralph Porges, and Edmund J. Struzeski, Jr. 1962, 49p SEC-TR-W62-3

Descriptors: (*Industrial waste treatment, *Food industry).
Identifiers: *Poultry processing, *Water pollution control.

The slaughtering and dressing of poultry is one of the smaller industries but nevertheless a very important one. Modern development has been towards centralization of poultry plants. In certain areas of the country where poultry processing establishments have concentrated, the problem of waste disposal is critical. Even one plant of average size or greater may pose a serious waste problem in a small town. The study was undertaken because of the interest shown by regulatory agencies, industry, consulting engineers, and others concerned with water use and waste disposal. The primary intent of this report is to show suitable means of waste water utilization, reduction, and disposal. Although much of the information has been obtained from the published record, considerable data have been derived from field investigation and contacts with many people vitally interested in the poultry industry.

STUDY OF OMAHA, NEBRASKA, MEAT--PACKING WASTES.

Feb 65, 55p

Descriptors: (*Food processing, Water pollution), (*Missouri River, Water pollution).
Identifiers: *Meat packing industry, *Omaha (Nebraska), *Water quality data.

The report describes and presents the findings of a survey of meat-packing house wastes discharged to the Missouri River at Omaha, Nebraska, during the period November 30 to and including December 12, 1964. The objective of the study was to secure data on the volume and characteristics of the wastes to the Monroe Street and South Omaha sewerage system. An evaluation of the pollution, particularly in terms of coliform bacteria, grease, solids, and oxygen demand, is included because of the decision to continue discharge of paunch manure and accompanying wastes to the city sewers. Grease quantities were measured because of experience of detrimental effects upon downstream water uses, including the St. Joseph, Missouri, municipal water treatment plant. The operation of the Omaha-Missouri River sewage treatment plant was reviewed.

SUMMARY OF CONFERENCE AND CONCLUSIONS AND RECOMMENDATIONS ON INTERSTATE AIR POLLUTION, NATIONAL CAPITAL METROPOLITAN AREA.
Dec 67, 33p

Descriptors: (*Air pollution, *District of Columbia), (*Air pollution, *Virginia), (*Air pollution, *Maryland).
Identifiers: *Washington Metropolitan Area.

Meteorological evidence demonstrated that pollutants discharged into the atmosphere in the District of Columbia, Virginia and Maryland are transported across their respective borders into neighboring jurisdictions subject only to the vagaries of wind and weather. It was further shown that in the National Capital metropolitan area topography allows free air movement across political boundaries because of the absence of significant natural or artificial obstructions. That such discharges cause or contribute to interstate air pollution which endangers health or welfare was demonstrated by a number of experts in many fields. Recommendations for abatement are summarized.

CONTROLLED ENVIRONMENT FACILITIES: A SURVEY.
Technical rept.,
John M. Henderson. 1961, 60p SEC-TR-W61-6

Descriptors: (*Environment simulators, *Laboratories).

With the increasing attention to environmental aspects of water quality, interest has developed in the feasibility of using controlled environment facilities in this research. Such facilities may make possible acceleration of important developments, whether the research relates to special variables under controlled conditions, or whether the need is to simulate a natural complex consistently over a period of time. Design requirements of controlled facilities must be approached thoughfully to achieve the desired results. Accordingly the Division of Water Supply and Pollution Control, Research Branch, enlisted the services of the author to survey some of the facilities of this type available in the United States. The present report summarizes his notes and observations.

Progress rept.,
Robert W. Vivian, and Kenneth A. Dostal. Jan 68, 85p PR-4

Descriptors: (*Food processing, *Industrial waste treatment), Anaerobic processes, Aerobic processes.
Identifiers: *Potato processing, Biological industrial waste treatment, *Water pollution control.

Potato wastes are one of the major pollutional sources in the State of Idaho. Even with primary treatment afforded by all processing plants, these wastes, in combination with other wastes, have resulted in fish kills and other pollution problems during periods of low flow in receiving streams. The potato processors are now faced with providing secondary treatment for their wastes and recognize that the cost of waste treatment must be considered to be part of the cost of doing business. The objective of the study is to conclude pilot plant studies on feasible methods of secondary treatment of potato processing wastes. Two specific methods are being investigated: an anaerobic lagoon followed by a surface-aerated, aerobic lagoon and an aerobic lagoon system. Due to late arrival of a surface-aerator the progress report covers only the first system - an anaerobic lagoon followed by a surface-aerated, aerobic lagoon.

WASTE WATER LAGOON CRITERIA FOR MARITIME CLIMATES.
Progress rept. 1 Dec 59-1 Jun 61,
Frederick J. Burgess, and Martin E. Northcraft. 1 Jun 61, 71p
Grant PHS-RG-6784

Descriptors: (*Sewage treatment, *Lagoons (Ponds)).
Identifiers: *Aeration ponds.

Waste water oxidation lagoon studies were conducted at Oregon State University to establish criteria for their use in the maritime climates of the Pacific Northwest. An experimental facility was constructed consisting of two cells, each one acre in surface area and three feet deep on which studies were conducted. Emphasis was placed on determination of basic factors influencing lagoon use under various conditions. These include surface reaeration mechanics, sludge accumulation and respiration, bacteriological quality, and disinfection requirements, together with other problems as defined in this report. WATER RESOURCES STUDY, PLATTE RIVER BASIN, IOWA AND MISSOURI. (STUDY OF POTENTIAL NEEDS AND VALUE OF WATER STORAGE FOR MUNICIPAL, INDUSTRIAL, AND QUALITY CONTROL PURPOSES.)
Mar 64, 51p

Descriptors: (*Platte River Basin, *Reservoirs), (*Missouri, *Water resources), (*Iowa, *Water resources), Trends, Water consumption.

The purpose of this study is to determine the need for and value of storage for municipal and industrial water supply and quality control in the Platte River Basin which is 2,440 square miles and is located in northwest Missouri and southwest Iowa. The study covers water storage needs and values during the 100-year study period, 1970 to 2070, as requested by the Corps of Engineers. (Author)

REPORT ON IMMEDIATE WATER POLLUTION CONTROL NEEDS, INTERSTATE AND INTRASTATE WATERS, LONG ISLAND REGION.
Apr 67, 99p

Descriptors: (*Long Island, *Water pollution), (*New York, Water pollution).
Identifiers: *Nassau County (New York), *Suffolk County (New York).

The report reviews the water pollution problems in the Long Island Region, which consists of Nassau and Suffolk Counties in New York State. The discharge of waste from municipalities and numerous other sources degrades water quality and prevents full utilization of this natural resource throughout the Region. The purpose of the report is to delineate those actions which should be undertaken immediately to prevent further degradation of these waters. Such actions include not only construction of new or improved municipal and industrial waste treatment facilities, but also those studies, surveys and research which must be completed prior to development of sound water quality management programs for the future.

AN ANALYSIS OF MUNICIPAL AND INDUSTRIAL WATER SUPPLY IN THE WILLAMETTE BASIN, OREGON,
J. E. Britton. Apr 65, 83p Working Paper-55
Report on Columbia River Basin Comprehensive Project for Water Supply and Pollution Control.

Descriptors: (*Willamette River Basin, *Water resources), (*Oregon, *Water resources), Trends, Water supply, Water consumption.

The report was prepared with several thoughts in mind other than merely to present a numerical description of the present and projected municipal water supply situation in the Willamette River Basin, Oregon. Factors that influence development and utilization of the water resource were examined in an effort to identify the major influences with this basin. Many of the factors have been subjects of individual studies at various times and places with little success in arriving at a universal formula for applying the influencing factors. Consideration of resource development resulted in several conclusions applicable to this basin at the present time.

AIR QUALITY DATA FROM THE NATIONAL AIR SAMPLING NETWORKS AND CONTRIBUTING STATE AND LOCAL NETWORKS 1964-1965.
1966, 127p

Descriptors: (*United States, *Air pollution).
Identifiers: *Air quality data, *National Air Surveillance Networks.

This report summarizes air quality data gathered during 1964 and 1965 at nearly 300 stations that gathered bi-weekly samples of suspended particulate matter, about 30 stations that gathered bi-weekly samples of two gaseous pollutants, and another seven stations that continuously monitored six gaseous pollutants, suspended particulates, and soiling index. This volume also continues the policy of including summaries of data contributed by state and local agencies that operate their own air sampling networks. In addition to the basic data on suspended particulates and gases, data on several fractions of the particulate matter are included herein. These are generally presented for years earlier that 1964-1965, not only because the chemical analysis of the particulate samples behind the primary weight determination, but also because expanded laboratory capacity has permitted the analysis of earlier samples held in reserve.

A REPORT OF WATER POLLUTION IN THE YELLOWSTONE DRAINAGE BASIN.
Water Pollution Series.

Jan 52, 69p PHS-Pub-129, PHS-WPS-23

Descriptors: (*Yellowstone River Basin, *Water pollution), (*Montana, Water pollution), (*Wyoming, Water pollution).

The report is produced under the cosponsorship of the Montana State Board of Health, North Dakota State Department of Health, Wyoming Department of Public Health, and the Public Health Service. It is based on data available as of January 1, 1952, on sources of pollution, treatment facilities employed, and stream conditions. The report also presents information concerning use of water resources, pollution entering water resources and resulting damages, benefits which may result from pollution prevention and abatement, pollution prevention measures in effect and those which appear to be needed. A sincere effort has been made to present a fair picture of the water pollution problems in the Yellowstone Basin and to present reasonable conclusions and recommendations.

AN APPROACH TO THE IDENTIFICATION OF PETROLEUM REFINERY WASTES IN SURFACE WATERS,
A. A. Rosen, and F. M. Middleton. 1954, 15p
Presented before the Division of Water, Sewage, and Sanitation Chemistry at the 125th Meeting of the American Chemical Society, Kansas City, Missouri, March 23 to April 1, 1954.

Descriptors: (*Refineries, Industrial wastes), (*Industrial wastes, Water analysis), (*Hydrocarbons, *Water analysis), Infrared spectra, Spectroscopic analysis.
Identifiers: *Water pollution detection.

Because of their large volumes and high odor intensities the most significant pollution effect of petroleum refinery process water effluents is the production of tastes and odors in receiving waters. The major organic component of petroleum refinery wastes is the neutral group, consisting of hydrocarbons and closely related compounds which do not form salts with acids or bases. A large proportion of the odorous organic components is contained in the neutral group. The report describes the analysis of the compounds of this group. In this method, organic substances are recovered from the water by adsorption on activated carbon and subsequent elution, then are compared with a sample of refinery waste materials on the basis of elemental analysis, physical and chemical properties, and infrared spectra. To minimize the interference of oxygenated compounds, the method described in this paper utilizes adsorption chromatography on silica gel to remove oxygenated substances.

Report on Yakima River Basin, Enlargement Project.

Descriptors: (*Yakima River Basin, *Water pollution), (*Washington (State), Water pollution), Reservoirs, Water resources.
Identifiers: Benton County (Washington), Killitas County (Washington), Yakima County (Washington).

The investigation on which this report is based was conducted for the purpose of advising the Bureau of Reclamation on the need for and value of storage in Bumping Lake Enlargement, Yakima River Basin, for water quality control. To accomplish this, all available data on water uses, waste sources, and water quality were examined, evaluated, and projected. Field data collected by the Public Health Service and Washington State Pollution Control Commission in 1961 and 1962 aided the evaluations. The area covered in the report included all of the Yakima River Basin drainage and is defined demographically by areas within Benton, Kittitas, and Yakima Counties.

BULLETIN OF COURSES: WATER POLLUTION CONTROL TRAINING PROGRAM; JULY 1969 TO DECEMBER 1970.

28 Feb 69, 49p

Descriptors: (*Water pollution, *Education).
Identifiers: *Water pollution control.

The objective of the Training Program is to provide specialized training in the causes, prevention, and control of water pollution. Training not generally available elsewhere is featured in specialized subjects, including recent developments in sanitary engineering, chemistry, aquatic biology, and microbiology in the field and in the laboratory. It is expected that this training will lead to rapid application of new research findings, increase skills of technical and professional personnel, and train new employees recruited from other professional or technical areas in the special skills required in water pollution control. Scientists, engineers, and recognized authorities from other FWPCA programs other government agencies, universities, and industry, supplement the training staff by serving as guest lecturers and special consultants. INVESTIGATION OF PHOTOCHEMICAL REACTIVITIES OF ORGANIC SOLVENTS.
Final rept.,
K. W. Wilson, and G. J. Doyle. Sep 70, 87p
Contract CPA-22-69-125

Descriptors: (*Photochemistry, *Organic solvents), (*Smog, Organic solvents), (*Air pollution, Organic solvents), Nitrogen dioxide.

The photochemical reactivities of 20 commercial solvents were measured by experiments using a smog chamber. Each solvent was studied in a simple system comprising pure air, nitrogen dioxide, and the individual test solvent and in a more complex mixture comprising pure air, propylene, toluene, butane, and nitrogen dioxide and the test solvent. To the extent possible, the test solvents were selected to give groups of chemicals that differed systematically in certain structural features so that conclusions could be drawn relating structure and reactivity. Reactivities were evaluated by measuring dosages of nitrogen dioxide, oxidant, ozone, and PAN (peroxyacetyl nitrate); rates of disappearance of nitrogen dioxide, test solvent, propylene, toluene, and butane; eye irritation level; and maximum aerosol level. Some of these measurements varied sufficiently so that they could be used as criteria for ranking the solvents.

UTILIZATION OF FREE AND COMBINED AMINO ACIDS BY ACTIVATED SLUDGE,
Dale A. Carlson. Jun 65, 138p
Grant PHS-WP-00247

Descriptors: (*Activated sludge process, Biodeterioration), (*Proteins, *Biodeterioration), Deoxyribonucleic acids, Sludge, Amino acids.

The research is concerned with utilization of nitrogen in the form of amino acids both singly and bound together in peptides and proteins. Such proteinaceous materials comprise the major nitrogen fraction in domestic sewage and, hence, studies on optimum conditions required for high rate biological utilization of proteins can be useful in the design of more efficient biological treatment facilities for the removal of nitrogen from waste waters. The study was concerned first with the utilization of individual amino acids as separate entities, then as components of di- and tri-peptides, and finally as components of keratins--a protein type very resistant to degradation. Auxiliary topics covered are: (a) modification of Burton's DNA test for use with the mixed cultures of activated sludge. (DNA was used as a measure of new cell production) (b) development of a graphical digital computer program for evaluating and presenting Warburg respirometric data and (c) development of a KWIC program for retrieval and storage of literature pertinent to the project.

AIR RESOURCE MANAGEMENT PROGRAM FOR SOUTHWESTERN OHIO-NORTHERN KENTUCKY.
Mar 67, 52p

Descriptors: (*Air pollution, *Kentucky), (*Air pollution, *Ohio), Regional planning.

The primary purpose of the report is to assist the citizens and governments of southwestern Ohio and northern Kentucky (SWO-NK) in understanding the nature of their air pollution problem and in developing a course of action - an air resource management program - to assure desirable air quality both now and in the future. The report also presents a general discussion of the air pollution problem in the SWO-NK area and applies to it the ideal methodology for solving the problem, the air resource management concept. Various aspects of the air pollution problem are summarized from Technical Committee reports to provide background for the program proposal. The current status of control efforts is also covered.

TOXICANT-INDUCED BEHAVIORAL AND HISTOLOGICAL PATHOLOGY. A AUANTITATIVE STUDY OF SUBLETHAL TOXICATION IN THE AQUATIC ENVIRONMENT.
Final rept. 1962-63,
Harvey F. Ludwig. 19 Aug 64, 133p

Descriptors: (*Indicator species, Water pollution), (*Water pollution, *Aquatic animals), (*Toxicology, Water pollution), Ecology, Toxic tolerances, Histology, Pathology, Animal behavior, Avoidance responses, Bioassay, Contamination.
Identifiers: *Water pollution effects (Animals).

Research efforts have centered on behavioral pathology resulting from microchemical toxication of fishes, the quantification of which has proved to be an analytical tool of great sensitivity. For example, behavioral aberrations have been recorded in goldfish exposed to Toxaphene at 0.44 micro gm/l or 25 times greater than that producing behavior aberrations. The various experimental results presented for 264 hours. The 96 hour TL (m) under the same experimental conditions was 11.0 micro gm/l or 25 times greater than that producing behavior aberrations. The various experimental results presented herein are believed to demonstrate some of the potential of this approach in quantifying the effects of sublethal concentrations of water contaminants.

WATER METALS NO. 4, STUDY NUMBER 30. REPORT OF A STUDY CONDUCTED BY ANALYTICAL REFERENCE SERVICE.
Environmental Health Series,
Earl F. McFarren, John H. Parker, and Raymond J. Lishka. 1968, 128p
Report on Urban and Industrial Health.

Descriptors: (*Metals, *Water analysis), (*Trace elements, Water analysis), (*Spectrochemical analysis, Trace elements), (*Atomic spectroscopy, Trace elements), Standards, Accuracy, Statistical analysis.
Identifiers: *Water pollution detection.

In the study, three samples containing between 0.005 and 5.0 mg per liter of each of nine metals - zinc, chromium, copper, magnesium, manganese, silver, lead, cadmium, and iron - were provided. Each participant was requested to do a single analysis for each of the metals in each of the three samples by the provided atomic absorption spectrophotometric method. This method, depending upon the sensitivity of the instrument (burner, tube, etc.) available, gave the participant a choice of aspirating the sample directly into the flame or of chelating with ammonium pyrrolidine dithiocarbamate and extracting into methyl isobutyl ketone before aspirating. The results obtained were evaluated in terms of whether the sensitivity of the method was sufficient to permit the measurement of the metal with a reasonable degree of precision and accuracy at the concentration prescribed by the drinking water standards.

Report of a study conducted by the Analytical Reference Service.

Descriptors: (*Milk, Chemical analysis), (*Insecticides, *Chemical analysis), (*Food contamination, Milk), Accuracy, Standards.

In the study, 41 participating laboratories were instructed to analyze two solutions of ethyl acetate containing different mixtures of lindane, heptachlor epoxide, DDE, and dieldrin both before and after dilution with canned evaporated milk supplied with the sample. This was done to compare various techniques and ascess their accuracy. Gas chromatography with a microcoulometric titration was used by one participant, and the electron capture detector was used by 38 participants; thin-layer and paper chromatography were each used by one participant. Most participants achieved separation of pesticides either by use of a florisil clean-up column or a gas chromatograph column containing a mixture of a polar and a nonpolar liquid phase, or by use of both techniques. APPLICATION OF SPECTRAL ANALYSIS TO STREAM AND ESTUARY FIELD SURVEYS. I. INDIVIDUAL POWER SPECTRA.
Environmental Health Series,
T. A. Wastler. Nov 63, 36p PHS-Pub-999-WP-7

Descriptors: (*Water pollution, Sampling), Power spectra, Diurnal variations, Statistical analysis.
Identifiers: *Water pollution sampling.

The application of spectral analysis techniques to sanitary engineering stream and estuary studies is discussed from a practical operational viewpoint. Techniques of interpretation and the data requirements are emphasized rather than the mathematical basis and details of the technique. The usefulness of spectral analysis in analyzing records obtained from continuous, automatic monitoring stations is pointed out. Spectral analyses applied to tidal height records and dissolved oxygen records obtained in a field study of the Potomac Estuary are discussed. The discussion is limited to the application of individual power spectra computation to sanitary engineering investigations. (Author)

SUMMARY OF WATER QUALITY STANDARDS FOR THE INTERSTATE WATERS OF MONTANA.
Aug 69, 21p
Prepared in cooperation with the Montana State Water Pollution Control Council, Helena.

Descriptors: (*Montana, *Water pollution), Standards.
Identifiers: *Water pollution standards.

During the period of 1958 to 1965 Montana adopted water quality standards for all waters of the State. The standards consist of three major components: designation of the uses which interstate waters are to serve, specification of narrative and numerical criteria to protect and enhance water quality, and specification of a plan of implementation and enforcement, which includes treatment and control requirements for municipal, industrial, and other wastes discharged to or effecting interstate waters. These components are discussed.

TRACE METALS IN WATERS OF THE UNITED STATES. A FIVE YEAR SUMMARY OF TRACE METALS IN RIVERS AND LAKES OF THE UNITED STATES (OCTOBER 1, 1962-SEPTEMBER 30, 1967),
John F. Kopp, and Robert C. Kroner. 1967, 212p

Descriptors: (*Water pollution, *Trace elements), United States, Metals, Tables (Data), Boron, Barium, Strontium, Zinc, Iron, Copper, Manganese, Aluminum, Lead (Metal), Chromium, Molybdenum, Nickel, Silver, Cadmium, Beryllium, Cobalt, Vanadium, Arsenic.
Identifiers: *Water quality data.

The data presented in this publication were obtained over a five-year period, October 1, 1962-September 30, 1967 and represent over 1,500 samples collected from over 130 sampling stations. Of the nineteen elements routinely sought, boron, barium and strontium occurred with a frequency of over 98%. Zinc, iron and copper were found quite frequently, being observed in about 75% of the samples. Manganese was slightly less frequent at 51%. Aluminum, lead, chromium, molybdenum and nickel varied between 16 and 33%. Cadmium, beryllium, silver, cobalt, vanadium and arsenic were detected at measurable levels in less than 7% of the samples. DRIVER LICENSING GUIDELINES FOR MEDICAL ADVISORY BOARDS RELATING FUNCTIONAL ABILITY TO CLASS OF VEHICLE,
Michael S. Stock, William O. Light, Frederic D. Burg, and John M. Douglass. 1969, 38p PHS-Pub-1996

Descriptors: (*Licenses, *Motor vehicles), Medical examination.
Identifiers: *Drivers licenses.

Responsibility for licensing motor vehicle operators rests with state motor vehicle departments. Licensing administrators rely heavily on recommendations from medical advisors in problem cases where questions arise as to whether physical or mental impairments of an individual would make him an unacceptable risk as a driver on public highways. The functional criteria selected are common to several different disease entities or impairments. For the purpose of these guidlines, subdivisions of functional level have been grouped within the seven of the relationship between the type of license and the functional ability required for the three classes of licenses, recommended license limitations are given, in tabular form where feasible.

UPGRADING EXISTING WASTEWATER TREATMENT PLANTS,
John M. Smith, Arthur N. Masse, and Walter A. Feige. 1972, 15p

Descriptors: (*Sewage treatment, Upgrading).

It is estimated that an investment of 18.1 billion dollars will be required for the construction of municipal wastewater treatment facilities in the United States to meet the projected 1976 Federal State Water Quality Standards (1). Approximately one fourth of this amount will be used for upgrading the performance of the existing wastewater treatment facilities. The application of todays technology in upgrading plant performance includes (a) techniques that can be used to maintain the original treatment plant efficiency under increasing organic and/or hydraulic loading, (b) the addition of processes that can be used to increase overall plant removal efficiencies and (c) process additions or modifications for specific contaminant removal. Physically, these upgrading procedures may be applied ahead of the plant; as modifications of the treatment process itself; or as effluent polishing techniques. The report describes these upgrading procedures.

HYPOCHLORITE GENERATOR FOR TREATMENT OF COMBINED SEWER OVERFLOWS.
Water pollution control research series,
Frank B. Leits, Steven A. Michalek, and John L. Greatorex. Mar 72, 91p EPA-11023-DAA-03/72
Contract DI-14-12-490
Paper copy available from GPO $1.00 as EPI.16.11023-DAA-03/72

Descriptors: (*Sewage treatment, Disinfection), (*Disinfection, *Overflows), (*Electrolytic cells, *Gas generators), Combined sewers, Sodium hypochlorite, Operating costs, Design, Capitalized costs, Ion exchange membrane electrolytes, Process variables, Performance evaluation.
Identifiers: *Water pollution control.

An advanced electrolytic generator has been developed for on-site production of sodium hypochlorite for disinfection of overflows from combined sewer systems. In this system an electrochemical cell electrolyzes sodium chloride brine to chlorine gas and sodium hydroxide solution, which are reacted immediately outside the cell to produce a 5 to 10% sodium hypochlorite solution. Significant advances in safety and economy have been realized by use of a hydraulically impermeable cation exchange membrane. The most critical components have operated for over 3000 hours with no deterioration of performance. The generator requires 1.6 KWH of electricity and 2.1 pounds of salt per pound of sodium hypochlorite. The operating cost for systems larger than 500 pounds of hypochlorite per day is projected to be 3 to 4 cents per pound of hypochlorite. (Author Modified Abstract)

THE SANTEE RECREATION PROJECT, SANTEE, CALIFORNIA.
Water pollution control research series (Final),
John C. Merrell, Jr., William F. Jopling, Roderick F. Bott, Albert Katko, and Herbert E. Pintler.
1967, 174p WP-20-7

Descriptors: (*Santee Lakes, *Water quality), (*California, Recreational facilities), Water reclamation.

The report presents the results of a study of the Santee, California recreational lakes, which were deliberately planned to utilize the community's reclaimed sewage effluent. By the summer of 1965, a special basin adjacent to one of the lakes was supplied with reclaimed water and used for swimming. A seven-agency cooperative study evaluated the content of waste water passed through conventional secondary treatment processes, the sand filtration, and the recreational lakes. No health hazards were demonstrated by the viral or other findings, and this fact had considerable impact in the promotion of public acceptance of the use of the recreational facilities.

REPORT ON WATER RECLAMATION.
Progress rept., 1 Jan 65-1 Jan 66,
Herbert J. Simins, and John H. Peters. Apr 66, 52p
Grant WPD-71-01

Descriptors: (*Sewage disposal, *Ground water recharge), (*Injection wells, Sewage disposal), Salt water intrusion, New York.
Identifiers: *Nassau County (New York), *Liquid waste disposal.

In Nassau County, New York, it is estimated that 27 million gallons a day of fresh water is flowing out to waste to sea from the south watershed. A barrier injection line utilizing renovated water along the south shore of the County would prevent the escape of this 27 million gallons a day and also supply the alternate flow which would maintain the fresh-salt water interface and prevent salt water intrusion. By the creation of this hydrologic dam, the 27 million gallons a day of fresh water thus made available could be utilized for additional water supply. The report discusses laboratory bench studies and model unit studies to determine parameters for a larger 400 gpm tertiary treatment pilot plant.

AN INVESTIGATION OF TECHNIQUES FOR REMOVAL OF CHROMIUM FROM ELECTROPLATING WASTES.
Final rept.,
G. R. Smithson, Jr. Mar 71, 98p EPA-WQO-12010-EIE-03/71
Grant WPRD-201-10-68

Descriptors: (*Activated carbon treatment, Chromium), (*Water pollution, *Chromium), (*Electroplating, Industrial waste treatment), (*Industrial waste treatment, *Metal finishing), Flotation, Solvent extraction, Operating costs, Capitalized costs.
Identifiers: *Water pollution control.

The report describes work on the removal of hexavalent chromium from plating rinse waters employing various treatment processes. Information was sought by questionnaire and by waste water analyses on the type of waste produced by smaller electroplating plants. Laboratory studies were conducted on several nonconventional methods for treatment of these wastewaters including ion flotation, adsorption on activated carbon, and solvent extraction. A demonstration pilot-plant study also was conducted on the activated carbon process employing actual rinse waters from a hard chrome plating operation. The results of the various phases of the study indicated that activated carbon adsorption for chromium removal may have practical application in many small plating plants.

SCREENING/FLOTATION TREATMENT OF COMBINED SEWER OVERFLOWS.
Water pollution control research series,
Donald G. Mason, and Mahendra K. Gupta. Jan 72, 173p EPA-11020-FDC-01/72
Contract DI-14-12-40
Paper copy available GPO $1.50 as EP1.16:11020F 01/72.

Descriptors: (*Flotation, Overflows), (*Disinfection, Overflows), (*Size screening, Overflows), (*Sewage treatment, *Overflows), Combined sewers, Chlorination, Ultraviolet radiation, Flocculating, Biochemical oxygen demand, Design, Capitalized costs, Operating costs, Performance evaluation, Oxidation, Ozone.
Identifiers: *Water pollution control.

The report documents a study to develop a treatment system for combined sewer overflows. The processes of chemical oxidation, screening, dissolved-air flotation, and disinfection were evaluated in the laboratory. A 5 MGD demonstration system was designed, installed and evaluated. Suspended solids and volatile suspended solids removal in the range of 65-80% were consistently obtained at influent concentrations of 150 to 600 mg/l. BOD and COD removals were slightly lower at 55 to 65% for influent concentrations of 50 to 500 mg/l. Addition of chemical flocculents (ferric chloride and a cationic polyelectrolyte) was necessary to obtain these removals. Without the use of chemical flocculents, removal of BOD, COD, suspended solids, and volatile suspended solids were all in the range of 40-50%. The screening flotation system provided sufficient detention time (difference 15 minutes) for adequate disinfection with hypochlorite salts. Cost estimates are presented.

BRASS WIRE MILL PROCESS CHANGES AND WASTE ABATEMENT, RECOVERY AND REUSE.
Water pollution control research series,
Leslie E. Lancy, and Charles A. Forbes. Nov 71, 47p EPA-12010-DPF-11/71
Paper copy available from GPO $0.55 as EP1.16:12010DPF-11/71.

Descriptors: (*Metal finishing, *Industrial waste treatment), (*Materials recovery, *Copper), (*Water pollution, Pickling compositions), (*Pickling compositions, Materials recovery), Brasses, Process charting, Chemical cleaning, Hydrogen peroxide, Sulfuric acid, Electrolysis, Water reclamation, Wire processing, Capitalized costs, Operating costs, Sludge disposal.
Identifiers: *Metal recycling, Waste water reuse, *Water pollution control.

The report describes process changes and waste treatment, recovery, and reuse facilities installed by Volco Brass and Copper Company, Kenilworth, New Jersey. The plant produces 75 tons of wire per day. An electrolytic system was installed to recover copper from the spent primary pickle solution and to regenerate the sulfuric acid for reuse. A hydrogen peroxide bright pickle replaced the chromate and fluoride bright pickles previously used. Copper from the bright pickle is also recovered in the electrolytic system. The electrolytic copper is reused on location in casting. An integrated copper treatment system was installed to treat bright pickle drag-out. Sludge from the integrated system is recovered for sale. Rinse water consumption was reduced from 150 gpm to 10 gpm. Former discharges of chromium, ammonium, and fluoride ions have been eliminated. Cost and operating data and effluent analyses are presented. (Author)

MARICOPA COUNTY. AN INTERIM REPORT ON A SOLID WASTE DEMONSTRATION PROJECT.
Interim rept.
1969, 329P
Grant PHS-UI-00039

Descriptors: (*Waste disposal, *Arizona), (*Regional planning, Waste disposal).
Identifiers: *Maricopa County (Arizona), *Solid waste disposal.

The project demonstrates how new or improved solid waste management techniques could solve a regional solid waste problem by developing a solid waste disposal system and plan for county-wide reference and use, and by developing a protocol and timetable for putting the plan into effect. Types and quantities of solid wastes now being produced in Maricopa County, Arizona, will be determined, and existing disposal methods identified. The interrelationship between current collection practices and disposal practices will be studied. Estimates of population growth to the year 2000, and parallel projected increases in solid waste production will be made.

REPORT ON THE IMMEDIATE WATER POLLUTION CONTROL NEEDS FOR THE IN-

TERSTATE AND INTRASTATE WATERS OF THE METROPOLITAN NEW YORK REGION.

Jun 67, 94p
Includes Addenda.

Descriptors: (*New York, *Water pollution), (*New Jersey, *Water pollution).
Identifiers: *New York City Metropolitan Area.

The report reviews the water pollution problems in the metropolitan New York region, which includes the drainage basins of all streams entering the Hudson River south of the southern boundaries of Orange and Putnam Counties; entering and including Raritan, Newark and New York Bays; and entering the north side of Long Island Sound west of the Housatonic River Basin. The Region lies chiefly in New Jersey and New York, but includes a small portion of Connecticut. The discharge of waste from municipalities, industries and numerous other sources has degraded water quality and prevents full utilization of this natural resource throughout the region. The purpose of the report is to delineate the actions which should be undertaken immediately to prevent further degradation and to provide enhancement of these waters.

STATE-OF-THE-ART OF THE MICROSCREEN PROCESS.

Jul 70, 95p

Descriptors: (*Sewage treatment, Sewage filtration), (*Reviews, *Sewage filtration).
Identifiers: *Microscreening.

The objective of the study was to develop a microscreen model as a computer subroutine compatible with the executive program of the Federal Water Quality Administration. The goal for model development was that the model should enable one to predict microscreen performance when the process is used for treatment of secondary effluents as well as capital, operating, and maintenance costs associated with use of the process. A critical review of the solids removal mechanisms potentially operative in the microscreen process has been presented. The mechanisms examined include: mechanical screening; gravity settling; interception; impaction; Browian diffusion; molecular forces; electrostatic and electrokinetic forces; and chemical forces. The two primary design considerations have been the hydraulics and solids removal efficiency. Performance of specific microscreen installations have been tracked variously by : liquid balances; solids balances; screen and solids character; and screen loading rates. (Author)

CELLULOSE DEGRADATION IN COMPOSTING.
Final rept.,
Raymond Regan, John S. Jeris, Robert Gasser, Kevin McCann, and Joseph Hudek. Mar 73, 153p*
EPA-R3-73-029
Grant EP-00161

Descriptors: (*Waste disposal, Composts), (*Cellulose, *Biodeterioration), (*Composts, Cellulose), Microbiology, Design criteria, Performance evaluation, Refuse disposal, Oxygen, Nutrients, Temperature.
Identifiers: *Solid waste disposal, Oxygen requirements, Nutrient requirements.

The purpose of the research investigation was to determine the optimum environmental conditions for the degradation of refuse using the composting process. Shake flasks and Warburg studies were used to scan wide ranges of environmental parameters to locate optimum conditions for continuous studies in three bench scale composters of 1.5 cubic feet capacity each. Close control of the following parameters was maintained: temperature, air, moisture, pH, nitrogen, and phosphorus. Temperature and residual oxygen were monitored electronically while other analyses were performed periodically. Optimum values of various environmental parameters are given. Free air space is suggested as a universal parameter for composting solid wastes from various sources. The use of recycle especially under winter conditions, is recommended. Due to its resistance to biological degradation, cellulose, a major component of paper, should be recovered rather than composted. (Author)

A CITIZEN'S GUIDE TO CLEAN AIR.

Jan 72, 92p*
Library of Congress catalog card no. 71-187901. Sponsored in part by Environmental Protection Agency, Washington, D. C.

Descriptors: (*Air pollution, *Legislation), (*Regulations, Air pollution), Reviews, Standards, Automobiles, Exhaust gases, Public law, Economic analysis, Financing, Government policies, Mass communication.
Identifiers: Air pollution standards, Citizen participation.

In 1970 the Conservation Foundation published Your Right to Clean Air, a manual designed to help citizens participate in air quality control processes. In the last days of 1970, government control procedures were changed radically when Congress attached major amendments to the Clean Air Act. The federal revisions make necessary corresponding changes in state and local programs. New time schedules have been set, accelerating the entire control process, and important new avenues have been opened for public participation in decisions affecting every community's air. This is why this new edition was written. Some of the topics include: The clean air amendments of 1970; The first steps in the federal process; Implementation plans; Standards of performance; Hazardous air pollutant standards; Auto emission controls The citizen's legal rights; Economic considerations; and The citizen's role in policy-making.

It is a truism that the air we breathe is essential to our health and well-being. However, when that air is laden with extraneous substances--when there is air pollution--then, although still essential to our good health, the air can also produce undesirable health effects. In the discussion the authors shall consider only the recognizable manmade air pollutants. They consider only the effects on the health of man.

AERATED LAGOON TREATMENT OF FOOD PROCESSING WASTES,
Kenneth A. Dostal. Mar 68, 53p
FWQA-12060/03/68

Descriptors: (*Food processing, *Industrial waste treatment), (*Lagoons (Ponds), Industrial waste treatment).
Identifiers: *Aeration ponds, *Pea processing, *Water pollution control.

The report presents the data collected and the conclusions drawn from a six-week period of sampling of an aerated lagoon used to treat wastes from the frozen pea processing plant of Kelley-Farquhar located at Ferndale, Washington. Eleven hour composite samples were collected one day per week from July 6 to August 17, 1967, of the influent to the 5.6 million gallon aerated lagoon, effluent from the lagoon and effluent from a 135,000 gallon polishing pond. BUILDING FOR CLEAN WATER, 1965. A REPORT ON FEDERAL INCENTIVE GRANTS FOR MUNICIPAL WASTE TREATMENT AND FUTURE CONSTRUCTION NEEDS.

1965, 13p

Descriptors: (*Sewage treatment, *Grants).
Identifiers: *Sewage treatment plants.

Every city and town is responsible for cleaning up the pollution it creates. One objective of the Federal Water Pollution Control Act passed by Congress in 1956 and strongly amended in 1961 and 1965 was to help communities meet this responsibility. This law authorizing Federal grants to municipalities to assist them in the construction of sewage treatment works is discussed.

ENVIRONMENTAL HEALTH PLANNING GUIDE.

1962, 67p, PHS-Pub-823

Descriptors: (*Public health, *Regional planning).

The report emphasizes the evaluation of health-related utilities and services which readily lend themselves to long-range planning, and deals primarily with water, sewerage, refuse, air pollution and housing programs. Health department inspectional services are covered only in the organizational sense, and reference is made to existing rating schedules for several of these vital services. The procedures described in the guide can be applied to an area as small as a town or as large as a metropolitan area, and are particularly suited for use in a county with several incorporated places and operating agencies.

STATISTICAL SUMMARY OF MUNICIPAL WATER FACILITIES IN THE UNITED STATES, JANUARY 1, 1963,
Richard S. Green. 1965, 69p PHS-Pub-1039
See also rept. nos. PHS-Pub-301 and PHS-Pub-775.

Descriptors: (*Sewage treatment, *United States), (*Water treatment, *United States), Inventories, Water supply.
Identifiers: *Sewage treatment plants.

The report summarizes and analyzes data on community water supply and treatment facilities, based on the 1963 Inventory of Municipal Water Facilities. This is the fourth such study prepared by the Public Health Service. Comprehensive data are presented by States, community population size groups, and major drainage basins. For analytical and comparative purposes certain statistical data have been reproduced from the 1958 study. (Author)

PLANKTON POPULATION DYNAMICS.
Rept. for 1 Jul 59-30 Jun 61,
Louis G. Williams. 1962, 95p PHS-Pub-663-Suppl-2

Descriptors: (*Plankton, *Biological surveys), (*Water quality, Plankton), (*Algae, Biological surveys).
Identifiers: *Water quality data.

The chemical, physical and biological characteristics of surface waters are interrelated phenomena. Making greater use of the stream biota to determine existing, and to forecast future, water quality in the stream offers promising possibilities. Plankton studies within the National Water Quality Network have included extensive work designed to permit application of the principle of diatom species diversity to the development of water quality indices. The studies required development of new laboratory analytical techniques, as well as preliminary application of the methodology to surface water samples from the many diverse Network sampling points. Published herein are data from samples collected in the 2-year period July 1959 through June 1961 at 65 of the Network stations.

THE ECONOMICS OF CLEAN WATER.
Summary rept.
Mar 70, 48p
Paper copy available from GPO $0.50 as I67.1/2:970.

Descriptors: (*Sewage treatment, *Economic analysis), Cost analysis, Financing, Industrial wastes.
Identifiers: *Water pollution economics.

The report consists primarily of a comprehensive reassessment of the nation's municipal sewage treatment needs and costs. Each reported need associated with those systems was evaluated individually on the basis of the kind and normal size of the project required to eliminate it and the average unit cost of components required. In addition, adjustments were made to reflect the higher than average costs that occur in some States. Expected future needs and unreported needs were also evaluated in terms of observed statistical relationships between capital supply and growth and replacement factors. The report also deals with industrial investment requirements, historical investments, Federal cost-sharing, priority systems, public treatment of industrial wastes, and status of regional waste handling systems.

RECOMMENDED STATE LEGISLATION AND REGULATIONS. URBAN WATER SUPPLY AND SEWERAGE SYSTEMS ACT AND REGULATIONS. WATER WELL CONSTRUCTION AND PUMP INSTALLATION ACT AND REGULATIONS. INDIVIDUAL SEWAGE DISPOSAL SYSTEMS ACT AND REGULATIONS.
Jul 65, 113p PHS-Pub-1451

Descriptors: (*Septic tanks, *Regulations), (*Water wells, *Regulations), (*Government policies, Septic tanks), State government, Legislation.

One of the growing public health problems today is achieving satisfactory water supply and sewerage services in urban areas and in urban-like developments in nonurban areas. Widespread and uncontrolled use of individual wells and septic tanks in and near urban areas can endanger the public health because of associated hazardous chemical and bacteriological contamination. A report is made on recommendations for legislation endowing state and local agencies with regulatory authority over individual wells and septic tank installations.

A STUDY OF INDUSTRIAL WASTE POLLUTION IN THE SOUTH PLATTE RIVER BASIN. APPENDIX C. OUTFALL STUDY, LOCATION AND SAMPLING RESULTS.
Dec 66, 83p PR-6C
Supplement to the Basic Report.

Descriptors: (*Platte River Basin, *Outfall sewers).

A two and one-half year Industrial Waste Survey in the South Platte River Basin was culminated by the Federal Water Pollution Control Administration, South Platte River Basin Project in late 1966. The highlights of this Survey together with major recommendations on pollution abatement by industry are given in the basic report entitled 'A Study of Industrial Waste Pollution in the South Platte River Basin.' The Appendixes given here represent a supplementary issue to the main report. The appendix provides the location and description of 639 outfalls, pipes and ditches believed to represent potential or real sources of contributory pollution to Basin streams. These outfalls receive industrial wastes from one or more industries which could not be readily identified. Waste sampling was undertaken on 74 of these outfalls and all results are shown.

COMPARISON OF KINETIC AND DIFFUSIONAL MODELS FOR SOLID-LIQUID REACTIONS,
C. Y. Wen. 1967, 27p
Grant FWPCA-WP-00699
Report on Mass Transfer and Chemical Reaction in Water Pollution.

Descriptors: (*Particles, *Diffusion), (*Chemical reactions, Particles).

A comparison of the kinetic and diffusional models for solid-liquid reactions occuring in a spherical particle is presented. The similarities and differences of the unreacted-core shrinking model and the homogeneous model are examined in light of the rate-controlling factors. In view of the similarity of the two models, it is shown that erroneous conclusions in regard to the mechanism and the activation energies may be drawn from an analysis of the experimental data. A more versatile model is developed in order to augment the two models so that wider varieties of solid-liquid reaction systems may be treated. The concept of effectiveness factors in solid-liquid reactions is introduced and the influence of diffusion is ascertained. The present study presents a better phenomenological understanding of the mechanism of mass transfer and chemical reaction occuring in water pollution between liquid and solid. (Author)

MANUAL OF INDIVIDUAL WATER SUPPLY SYSTEMS.
1962, 132p PHS-Pub-24-Rev-62
Prepared in cooperation with the Joint Committee on Rural Sanitation, Washington, D.C. Revision of report dated 1950, PB-215 955.

Descriptors: (*Water supply, Handbooks), Public health, Water treatment, Sources.

An essential requirement for healthful and comfortable living is a dependable supply of water for drinking and other domestic uses. This supply should be palatable, convenient, of good quality, and adequate in quantity. This manual is a revision of PHS Publication No. 24, Individual Water Supply Systems, issued in 1950. It is hoped that the manual will be useful to State and local health authorities, well-drillers, industry groups, and others concerned with the development and operation of such supplies. This manual emphasizes the sanitation aspects of small supply systems such as those serving individual dwellings, farms, rural schools or similar institutions, recreational or tourist accommodations, camps, or other installations not having access to public water supply systems. The recommended practices should be helpful in the design, construction, and operation of these types of private and quasi-public systems.

USE OF MATHEMATICAL MODELS AS AIDS TO DECISION MAKING IN WATER QUALITY CONTROL,
Charles R. Hall, and Leo J. Hetling. 1968, 41p
Presented at the National Meeting of the American Inst. of Chemical Engineers (63rd), St. Louis, Mo. February 19, 1968. Prepared in cooperation with Water Resources Engineer, Maryland Dept. of Water Resources, Annapolis, Md.

Descriptors: (*Water resources, Hydraulic models), (*Water pollution, Cost analysis), (*Water quality, *Cost analysis), (*James River Basin, Water pollution), Virginia, Decision making, Benefit cost analysis.

A method of utilizing existing water quality and hydraulic computer models to arrive at least cost solutions of water quality problems is presented. The alternatives considered are reduction of waste loads by treatment, industrial process modification, and construction of reservoirs for low flow augmentation. The application of the methods to water resources problems in the James River Basin is discussed. The least cost solution of the water quality control problem is presented along with a subjective analysis of various alternatives. (Author)

MUNICIPAL WATER FACILITIES INVENTORY AS OF JANUARY 1, 1958. VOLUME I. REGION I - CONNECTICUT, MAINE, MASSACHUSETTS, NEW HAMPSHIRE, RHODE ISLAND, VERMONT.
1958, 78p
See also report dated 1958, PB-215 877.

Descriptors: (*Water supply, *Connecticut), (*Water supply, *Maine), (*Water supply, *Massachusetts), (*Water supply, *New Hampshire), (*Water supply, *Rhode Island), (*Water supply, *Vermont), (*Water treatment, Inventories).

This volume is one of nine which, taken together, comprise an inventory of public water supply facilities in the United States as of January 1, 1958. The listing includes all facilities in the six states serving places having a 1950 population of 100 or more which have been reported by the respective State Departments of Health. At the end of each State listing there appear the names of all places having a 1950 population of 100 or more but which were not reported as having a community water supply. The purpose of this inventory is to furnish up-to-date information on all water facilities for the use of industries and other private agencies and all levels of government.

HANDBOOK ON SANITATION OF VESSEL CONSTRUCTION.
1965, 95p PHS-Pub-393

Descriptors: (*Tanks (Containers), Design), (*Storage tanks, Design), (*Swimming pools, Design), (*Public health, Tanks (Containers)), Food sanitation, Rats.

Set forth in this handbook are minimum public-health standards relating to general sanitation and ratproofing in the construction of vessels. These standards have been developed over a period of several decades; experience has shown that their observance during construction, reconstruction, or major repair, will make it much easier to maintain the vessels in an acceptable, sanitary condition during operation. SEWAGE AND WATER WORKS CONSTRUCTION - 1958,
Richard S. Green, William H. Abbott, and Elsie M. Gibson. 1959, 18p PHS-Pub-673

Descriptors: (*Sewage treatment, *Contracts), (*Water treatment, *Contracts), Tables (Data).
Identifiers: *Sewage treatment plants.

The contract award data presented in this publication for the year 1958 result from the careful examination of over 25,000 contract notifications in the sewage and water works construction and related fields. All notifications of similar contracts awarded in the same geographical area are checked to reduce the chance of duplication. Certain contracts, primarily those covering sewage treatment plants, are checked and verified by the various state water pollution control agencies.

GROUND-WATER POLLUTION IN THE MIDDLE AND LOWER SOUTH PLATTE RIVER BASIN OF COLORADO.

Jul 67, 126p PR-9

Descriptors: (*Platte River Basin, *Water pollution), (*Ground water, Platte River Basin), (*Colorado, Water pollution), Water wells.

On July 18, 1963, the Governor of Colorado requested the Secretary of Health, Education, and Welfare to assist the State in determining sources of pollution and quality of waters of the South Platte River Basin within the State of Colorado. Findings and recommendations from this study were to lead to a program of pollution abatement to be developed jointly by the South Platte River Basin Project and the Colorado State Department of Public Health. Specific water quality objectives were recommended for the South Platte River and its major tributaries. (Author)

COMBINED SEWER REGULATOR OVERFLOW FACILITIES.
Water pollution control research series.
25 Jun 70, 152p FWQA11022-DMU-07/70
Contract DI-14-12-456
Paper copy available from GPO $1.50 as I67.13/4:11022DMU07/0.

Descriptors: (*Combined sewers, *Flow regulators), (*Overflows, Flow regulators).
Identifiers: *Water pollution control.

Current design, operation and maintenance practices used by local jurisdictions in the United States and Canada were determined by personal interviews and compiled in the report. Particular attention was given to the performance of various types of regulators, the use of tide gates, new designs, European practices and the systems concept of combined sewer regulation. Thirty-seven drawings and photographs of regulators are included. Seventeen recommendations are made, the adoption of which would upgrade regulator facilities and tend to reduce receiving water pollution from combined sewer overflows. (Author)

AN ACCOUNTING SYSTEM FOR SANITARY LANDFILL OPERATIONS,
Eric R. Zausner. 1969, 21p BSWM-SW-15ts PHS-Pub-2007
Library of Congress catalog card no. 70-604125.

Descriptors: (*Waste disposal, *Accounting).
Identifiers: *Solid waste disposal, *Sanitary landfills.

The increasing costs and complexities of solid waste handling require new, more sophisticated management techniques. Data on performance and the costs of operation and ownership are essential for the use of these management tools. Hence, an adequate information system is a prerequisite to effective management. Although cost accounting represents only one part of the total information system, its design, installation, and utilization can represent the most significant step in the development of effective solid waste management. The proposed system provides a guide to the type and quantity of information to be collected, its classification, and the method of collection. It is intended to be of use to municipal or private personnel involved in landfill operation and ownership.

INVENTORY OF INTERSTATE CARRIER WATER SUPPLIES, BY STATES AND PUBLIC HEALTH REGIONS. JULY 1963.
1964, 30p PHS-Pub-1116

Descriptors: (*Water supply, Inventories).

The interstate carrier water supplies listed herein, which currently number 766, serve some 2,000,000 persons who travel daily from State to State on airplanes, buses, railway cars, and vessels. In addition, they are the source of water for 76,000,000 persons residing in the communities from which water is taken and placed aboard the conveyances. Thus, about 57% of the total United States population provided with public water supply, utilize systems which are certified by the Surgeon General as meeting the Public Health Service Drinking Water Standards. The last inventory of interstate carrier water supplies was issued in 1960. Since that time the status of some supplies has changed and other supplies have been added or deleted. The inventory is published for use of State Health Department engineers, municipal authorities and Public Health Service personnel who are concerned with the annual certification of the supplies and discussions which arise therefrom. Supplies are listed with regard to approval. (Author)

INVENTORY OF INTERSTATE CARRIER WATER SUPPLIES BY STATES AND PUBLIC HEALTH SERVICE REGIONS.
Aug 66, 41p

Descriptors: (*Water supply, Inventories).

This Inventory lists the 775 water supplies serving interstate carriers which have been classified as Approved, Provisionally Approved, or No Current Report on the data of recall from the computer, August 9, 1966. Water supplies listed as 'Approved' are in substantial compliance with the 1962 Public Health Service Drinking Water Standards. Those which are 'Provisionally Approved' are classified as such, pending the correction of certain defects. Water supplies which are classified as 'No Current Report' have been found acceptable at the time of the last survey report, but have been listed as 'No Current Report' automatically because the bacteriological records have not been kept up-to-date. HEALTH OF FERROUS FOUNDRYMEN IN ILLINOIS.
1950, 132p PHS-Pub-31
Prepared in cooperation with Illinois Department of Public Health.

Descriptors: (*Occupational diseases, Silicosis), (*Foundries, *Silicosis), (*Industrial medicine, Silicon dioxide), (*Air pollution, *Silicon dioxide), (*Illinois, Occupational diseases), Dusts, Iron, Industrial hygiene, Respiratory diseases, Pulmonary fibrosis, Tuberculosis, Skin diseases, Public health.
Identifiers: *Infoor air pollution, *Air pollution effects (Animals).

The report presents the clinical and environmental findings of a cooperative investigation into the exposures of ferrous foundry workers to silicosis and other hazards. Environmental investigations were made in 18 ferrous foundries, in which approximately 1,100 samples of air-borne dust were collected and studied. The amount of free silica in the air-borne dust varied with the operation and ranged from 13 percent at coremaking to 29 percent in pouring, shakeout and sand conditioning. The percentage of iron in the air-borne dust was found to range from 3 to 9 percent for all operations except casting cleaning, for which the proportion varied from 30 to 38 percent. Operational dust levels at various foundry activities in general were found to be much lower than those reported in earlier investigations. Concentrations of aldehydes were of a low order of magnitude. Carbon monoxide concentrations were relatively low in most instances. The most significant clinical findings dealt with those of the respiratory system. Pulmonary fibrosis of occupational origin was found in 9.2 percent of the men. Reinfection type of tuberculosis was found in 0.7 percent of white workers and in 1.7 percent of the Negroes. Skin diseases probably of occupational origin, was found in 1.7 percent of the men. The correlation of the clinical and environmental findings reveals that there is no reason to believe that dust conditions in the foundries studied have improved in the past 10 to 20 years.

Irwin M. Rosenstock, and Arthur P. Miller. Apr 54, 22p PHS-M-21

Descriptors: (*Sanitary engineering, *Personnel management).

In 1951, the Division of Engineering Resources of the Public Health Service reported a study of 1,782 college graduates who had received undergraduate education in sanitary engineering in the 40-year period 1910-49. The results showed that a little more than half of that group were employed in the profession in 1950. The purpose of the present study is to find out why half of those who made a choice in favor of sanitary engineering as undergraduates were not practicing it in 1950. Identification of the reasons that cause graduates who have completed sanitary engineering courses to depart from the sanitary engineering work area may permit the formulation of measures to reduce the loss. A STUDY OF THE POLLUTION AND NATURAL PURIFICATION OF THE SCIOTO RIVER,
Robert W. Kehr, W. C. Purdy, James B. Lackey, Oliver R. Placak, and William E. Burns. 1941, 174p
Public Health-Bull-276

Descriptors: (*Scioto River, *Water pollution), (*Ohio, Water pollution), Limnology.
Identifiers: *Self purification, *Water quality data.

Hydrometric, bacteriological, chemical, plankton, and bottom sediment studies were made of the Scioto River for 115 river miles below Columbus, Ohio, during a period of 30 months, involving three types of sewage treatment at Columbus, the point of heaviest pollution of the Scioto. Times of flow were determined for the stretch of river between Shadeville and Red Bridge 8 and 25 miles, respectively, below the point of entrance of Columbus sewage effluent. The bacteriological and chemical data were grouped according to three temperature and five discharge ranges. A careful examination of the physical properties and biological content of such sediments gives a reasonably accurate picture of average stream conditions. (Author Modified Abstract)

NITROGEN AND PHOSPHORUS IN WATER. AN ANNOTATED SELECTED BIBLIOGRAPHY OF THEIR BIOLOGICAL EFFECTS,
Kenneth M. Mackenthun. 1965, 139p PHS-Pub-1305

Descriptors: (*Water pollution, Nutrients), (*Nutrients, *Bibliographies), (*Limnology, Nutrients), Nitrogen, Phosphorus.

The book compiles a selected bibliography of literature with annotations specifically directed toward nitrogen and phosphorus and the ramifications of these and closely associated elements in the aquatic environment. Freshwater investigations have received preferential treatment but marine investigaions and research have been considered as such may relate or furnish clues to the solution of problems in freshwater. This book was compiled for the engineer and the scientist who are faced with predicting limnological changes resulting from nutirent loadings to standing bodies of water, with recognizing critical concentration values for algal development, and with predicting the effects of fertilizers on aquatic life. STUDIES ON HOUSING FOR ALASKA NATIVES.
Environmental health series: Arctic health,
Dennis R. Wik, William B. Page, and Michael L. Shank. Oct 65, 139p PHS-Pub-999-AH-1

Descriptors: (*Alaska, Houses), (*Arctic regions, *houses), Design.

The research described was begun in response to the critical health problems of Alaskan aboriginesin particular, high tuberculosis incidence and death rates. The expenditure of millions of dollars on tuberculosis treatment for a relatively small population clearly indicated the need for basic measures such as adequate housing. After an analysis of the technical problems relevant to housing construction in remote Alaskan villages, four experimental houses were designed and constructed in the field. Each was occupied by an Eskimo family; in return for rent-free occupancy, the householders maintained the houses and kept temperature records. The house construction types were plank-and-beam; rough lumber; commercial wood-stave water tank; and an extremely light shell mounted on a stable foundation (which could be adjusted to compensate for frost heaving). The results of the studies are presented.

WATER POLLUTION CONTROL. SEWAGE TREATMENT. WATER TREATMENT. SELECTED BIOLOGICAL REFERENCES,
Bibliography series,
William M. Ingram, and Kenneth M. Mackenthun. 1963, 146p PHS-Pub-1053, PHS-BS-8-Rev-63

Descriptors: (*Water pollution, Fresh water biology), (*Bibliographies, Fresh water biology).

The report of selected biological references on water pollution control include a number of related topics ranging from specific groups of organisms to those techniques used to determine changes in the environment and methods used in reporting data. Much literature is of relatively recent origin. The general expansion of the biological field, the introduction of new factors for consideration, e.g., radioactivity, new insecticides, and a wide range of pollutants for bio-assay, have stimulated research on the short- and long-range impact of these materials.

TIME-TEMPERATURE EFFECTS ON SALMONELLAE AND STAPHYLOCOCCI IN FOODS: II. BEHAVIOR AT WARM HOLDING TEMPERATURES THERMAL-DEATH-TIME STUDIES.
Milk and Food Research Program,
Robert Angelotti, Milton J. Foter, and Keith H. Lewis. 1960, 53p SEC-TR-F59-2, SEC-TR-F60-5

Descriptors: (*Food sanitation, Heat treatment), (*Salmonella, Food sanitation), (*Staphylococcus, Food sanitation).

The most commonly reported types of foodborne disease outbreaks are caused by salmonellae and staphylococci. A practical method of preventing foodborne disease outbreaks is the application of temperatures that will inhibit or destroy the causative organisms in perishable foods. Toward this end, studies were undertaken to establish experimentally the temperature limits for growth of salmonellae and staphylococci in ham salad, chicken a la king, and custard in the range of 95F to 120F. In addition, thermal-death-time studies were conducted on salmonellae and staphylococci in the same foods at 5F intervals from 130F to 150F. (Author)

WATER SUPPLY MANAGEMENT IN THE PACKAGED DISASTER HOSPITAL.
Health mobilization series.

1965, 40P PHS-Pub-1071-F-6

Descriptors: (*Hospitals, *Water supply), (*Nuclear warfare defense, Water supply).

In the event of a thermonuclear attack on the United States, it is assumed that a major proportion of existing hospital facilties would be destroyed. In recognition of these facts, the U.S. Public Health Service has pre-positioned Packaged Disaster Hospitals (PDH's) in communities throughout the nation. The PDH is a unit of supplies and equipment which, in disaster, can be set up in an existing building, such as a school, to supply an austere but functional general hospital. The booklet is the sixth in a series developed to assist those persons in a community responsible

for preparing to use the PDH in a disaster. It discusses water conservation techniques, suggests guidelines for meeting the emergency water requirements of the PDH (both quantity and quality), and contains sufficient information to be used as a training manual for familiarizing assigned operating personnel with their responsibilities and with actions required to activate the water supply section.

INDIVIDUAL WATER SUPPLY SYSTEMS.
1950, 68p PHS-Pub-24-Rev-50
Report on Recommendations of the Joint Committee on Rural Sanitation. For 1962 revision, see PB-215 858.

Descriptors: (*Water wells, *Design), National government, Government policies.

The development of safe and adequate supplies of drinking water for individual homes is essential and necessary to protect the health of the individuals residing in suburban areas. Urban fringe areas are often beyond the reach of municipal water systems, and individual wells or a community distribution system must be provided to serve the properties with a safe supply of water. The accelerated rate of housing construction has greatly aggravated environmental health problems, especially in fringe areas and rural communities. The recommendations of the Joint Committee are presented primarily for the purpose of establishing a uniform approach for various Federal agencies concerned with the sanitation of individual water supplies. SEWAGE TREATMENT PLANT CONSTRUCTION COST INDEX. CONSTRUCTION COST TRENDS MUNICIPAL WASTE TREATMENT WORKS.
1963, 37p PHS-Pub-1069

Descriptors: (*Sewage treatment, *Construction costs), Trends, Cost analysis, Indexes (Ratios).
Identifiers: *Sewage treatment plants.

Grants-in-aid for municipal waste treatment works construction authorized under the Federal Water Pollution Control Act in 1956, have been accompanied by a steady increase in the dollar volume of construction contracts awarded for these facilities. An accurate assessment of the increased construction activity and estimate of future construction needs require a thorough understanding of the changing purchasing power of the local and Federal funds invested in waste treatment works construction. Since waste treatment works have generally been considered to follow the ENR Construction Cost Index, a comparison of this index to the Public Health Service Sewage Treatment Plant (PHS-STP) Construction Cost Index was undertaken.

TO DEMONSTRATE THE EFFECTIVENESS OF IODINE FOR THE DISINFECTION OF PUBLIC WATER SUPPLIES AND TO DETERMINE THE PHYSIOLOGICAL EFFECTS ON A HUMAN POPULATION.
Progress rept. no. 6, 1 Mar 67-29 Feb 68,
A. P. Black. 1 Mar 68, 74p
Grant WPD-19-05-67

Descriptors: (*Water treatment, *Iodination), (*Disinfectants, *Iodine), Potable water, Water supply, Dosage, Ingestion (Biology), Public health, Gainesville (Florida), Florida, Bactericides, Algicides.

The production of objectionable tastes and odors during the period of experimental iodination of the municipal water supply of Gainesville, Florida in 1967 emphasized the importance of a better understanding of the types of compounds which are formed by the reaction of various types of organic compounds present in polluted water with disinfecting concentrations of elemental iodine. The taste threshold concentrations of iodine, free chlorine, and monochloramine were determined. Studies of the disinfection of swimming pool water have further demonstrated the effectiveness of iodine as a sanitizing agent, have shown that staphylococci are controlled more effectively by iodine than by chlorine, and that iodine does not control the growth of algae. A five year study of the physiological effect of iodine on a human population at the prisons at Lowell, indicate that no undesirable effects have resulted from the ingestion of a water disinfected with a dosage of 1.0 ppm of iodine.

GRAND (NEOSHO) RIVER INVESTIGATION (KANSAS, OKLAHOMA, MISSOURI, ARKANSAS),
Mark D. Hollis, Richard L. Woodward, Sam R. Weibel, and Paul D. Haney. Aug 40, 122p

Descriptors: (*Grand River, *Reservoirs), (*Neosho River, Reservoirs), (*Kansas, Water resources), (*Oklahoma, Water resources), (*Missouri, Water resources), (*Arkansas, Water resources), Water pollution.

The report describes an investigation of the Grand (Neosho) River to correlate the need, value, and effect of conservation storage in proposed flood control reservoirs with public water supply use and stream pollution control. Locally, there is

definite need and demand for low flow control, and this demand can be met most equitably by flow regulation from conservation storage in proposed flood control reservoirs. Optimum conservation storage as proposed at Council Grove and Marion is theoretically sufficient for minimum water supply and dilution requirements. (Author)

INVESTIGATION OF A PROPOSED RECIRCULATION SYSTEM FOR TOILET WASTES,
James B. Coulter, John F. Kopp, and David A. Thiemann. 1 Jul 52, 20p

Descriptors: (*Houses, Sewage treatment), (*Toilet facilities, *Sewage treatment), Aeration.

Two trials of a proposed system for the disposal of toilet-waste were made. The system investigated in the first trial consisted of three functional units: a grinder-type toilet, a receiving tank and a small pump. The hydraulically driven grinder was located below the bowl in the base of the toilet. The pump, operating continously, recirculated the tank contents through the toilet, furnishing power to drive the grinder, and liquid to flush the toilet. Solid particles deposted in the toilet bowl were flushed into the grinder where they were finely ground and carried in the liquid by gravity flow from the toilet to the receiving tank on the floor below. No effluent was discharged from the system. (Author)

INTERAGENCY PROGRAM REVIEWS.
1970, 100p

Descriptors: (*Water pollution, Government policies).
Identifiers: *Government agencies.

An objective of our 1970 work plans for the Federal Activities Coordination Branch was to conduct program reviews with agency heads for the purpose of establishing procedures for coordination and implementation of a program for controlling the pollution from Federal installations and activities. Top level discussions were held between FWQA and agency heads in FY 1970 to discuss and clarify the coordination and application of water quality control. The agencies dealt with included: Bureau of Land Management; Corps of Engineers; U. S. Forest Service; Bureau of Indian Affairs; and Soil Conservation Service.

EPA-SW-5rg, PHS-Pub-2104
Grant PHS-EC-00309
Library of Congress catalog card no. 73-608768.
Paper copy available from GPO $1.50 as HE20.1402:M42/2.

Descriptors: (*Waste disposal, *Collecting methods), Mathematical models.
Identifiers: *Solid waste disposal, *Baltimore (Maryland).

The application of operations research to the analysis of solid waste collection systems was studied. Models and techniques for facility location and routing are discussed and extended. Three different types of problem areas are viewed. Facility location, in particular the location of transfer facilities within a large-scale system was covered. The finding of optimal flow through given systems with added constraints is also discussed. One chapter is concerned with vehicle scheduling problems where routes are to be found for individual collection vehicles among various tasks. Finally, the analysis of an actual large-scale solid waste collection system, that of Baltimore, Maryland, is carried out using some of the methods developed. (Author Modified Abstract)

LIMNOLOGICAL ASPECTS OF RECREATIONAL LAKES,
Kenneth M. Mackenthun, William Marcus Ingram, and Ralph Porges. 1964, 188p PHS-Pub-1167

Descriptors: (*Lakes, *Limnology), (*Recreational facilities, *Water quality).

The enrichment of waters in natural basins often brings about biological excesses that are inimical to recreational and other water uses. The demand for clean, nuisance-free water, ever increasing with more leisure time and the growing population, will exert pressure for pollution abatement and water management to minimize nuisances. The book is written for persons involved in interpreting

and managing the biological problems and associated phenomena of recreational lakes.

INVENTORY: MUNICIPAL WASTE FACILITIES, 1962. REGION VIII. COLORADO, IDAHO, MONTANA, UTAH, WYOMING.
1963, 71p PHS-Pub-1065-Vol-8

Descriptors: (*Water pollution, *Colorado), (*Water pollution, *Idaho), (*Water pollution, *Montana), (*Water pollution, *Utah), (*Water pollution, *Wyoming), Inventories, Sources, Sewage.

The inventory contains the latest available data for all sources of municipal pollution in Region VIII which are of significance in water pollution control programs. Each non-community entry is referred to the nearest community, whenever possible. Entries appear in alphabetical order according to community. Entries listed under the same community are alphabetized by name, under that community. Following each State listing is a table showing those sewage disposal facilities which serve more than one of the entries, together with the names of all entries which are served by the particular facility.

BACTERICIDAL EFFECTS OF ALGAE ON ENTERIC ORGANISMS.
Water pollution control research series,
Ernst M. Davis, and Earnest F. Gloyna. Mar 70, 141p FWQA-18050-DOL-03/70

Descriptors: (*Algae, Bacteria), (*Bacteria, *Biodeterioration), Water pollution.

A series of experiments involving the effects of blue-green and green algae on the dieoff rates of selected bacteria have been conducted. Cultures of the normal blue-green contaminants were exposed to the enterics to determine antagonistic effects toward the enterics. Filtrate from actively growing algae was exposed to cultures of enterics to determine whether any antibiotic compounds were imparted to the medium during lag phase growth of algae. To determine aftergrowth of the enteric species, the duration of the tests was extended to about 90 days. Mixed cultures of green and blue-green algae were exposed to both single species of enteric bacteria and mixed cultures. The results indicated that mixed algal cultures cause a greater dieoff among the enteric bacteria than do individual species of algae. The dieoff characteristics of pathogenic species were also determined. The pathogenic species did not survive as long as the enteric test species under similar test conditions. Virtually no aftergrowth was detected on the part of the pathogens. (Author)

POLLUTION-CAUSED FISH KILLS IN 1962.
Annual rept. no. 3.

1962, 23P PHS-Pub-847-62
See also PB-216 112.

Descriptors: (*Water pollution, Fishes), Inventories.
Identifiers: *Fishkill, *Water pollution effects (Animals).

This publication is the third annual report of fish kills caused by pollution occurring in the United States. This report includes all fish kills in 1902 which were reported by the various State agencies. Even though the resulting totals of fish killed are large, they probably represent only a fraction of fish actually killed throughout the United States by man-made pollution.

POLLUTION-CAUSED FISH KILLS IN 1963.
Annual rept. no. 4.

1963, 30P PHS-Pub-847-63
See also PB-216 111.

Descriptors: (*Water pollution, Fishes), Inventories.
Identifiers: *Fishkill, *Water pollution (Animals).

A total of 6,816,530 fish were reported killed by water pollution in the United States in the year ending December 31, 1963, as compared to 6,200,000 the previous year. This fourth annual fish kill report shows that pollutants arising from industrial operations led all categories both as to number of kills and number of fish. Agricultural operations, chiefly pesticides, were second in number. For the first time, this report categorizes pollution attributable to 'transport operations' which accounts for accidental spills of chemicals and other toxic substances in transit.

THE COST OF CLEAN WATER. VOLUME IV. STATE AND MAJOR RIVER BASIN MUNICIPAL TABLES.

10 Jan 68, 49p

Descriptors: (*Water pollution, *Cost analysis), Tables (Data).
Identifiers: *Water pollution economics.

The Federal Water Pollution Control Act (Section 16 (a)) directs the Secretary of the Interior to conduct a comprehensive analysis of the national requirements for, and the cost of, treating municipal, industrial, and other wastewater effluents to attain water quality standards established under the Act. This first analysis is required to be submitted to the Congress by January 10, 1968, to cover Fiscal Years 1969-1973, inclusive, and to be updated each year thereafter. This is Volume IV of the report (State and Major River Basin Municipal Tables) containing a tabular breakdown of estimated construction costs of municipal treatment works and sanitary sewers, and the operation and maintenance costs of treatment works. The data are shown for each of the 50 states and District of Columbia and the Nation's major river basins as described by the Water Resources Council.

AUTOMOBILE SCRAPPING PROCESSES AND NEEDS FOR MARYLAND.
Final rept.

1970, 77P PHS-Pub-2027
Grant PHS-UI-00187
Library of Congress Catalog Card no. 73-605837.
Paper copy available from GPO $1.25 as HE20.1402:AU8.

Descriptors: (*Waste disposal, *Automobiles), (*Maryland, Waste disposal), Metal scrap.
Identifiers: *Junk car disposal.

Considering the abandoning, collecting, storing, disposing, salvaging, and processing of junked

cars as an integrated system, the authors analyzed each component of the system-the Junked Car, the Abandoned Car, the Impounded Car, the Auto Dismantler, the Scrap Processor, the Scrap User-and identified seven problem areas in the system, each requiring a solution. Based upon the data collected, alternative approaches to each problem were evaluated. In the evaluation, all alternatives, based on both technological changes in the private sector and suggested government actions, were analyzed to determine the effect of each on all problems and components of the system. Finally, a set of conclusions and recommendations was developed. (Author Modified Abstract)

MUNICIPAL WATER FACILITIES. INVENTORY AS OF JANUARY 1, 1958. VOLUME 8: COLORADO, IDAHO, MONTANA, UTAH, WYOMING. A COOPERATIVE STATE-FEDERAL REPORT.

1960, 58p PHS-Pub-775
Grant WPD-74

Descriptors: (*Water supply, *Colorado), (*Water supply, *Idaho), (*Water supply, *Montana), (*Water supply, *Utah), (*Water supply, *Wyoming), (*Water treatment, Inventories).

The report is one of nine which, taken together, comprise an inventory of public water supply facilities in the United States as of January 1, 1958. The listing includes all facilities serving places having a 1950 population of 100 or more. The listing is alphabetic by name of place within the State. At the end of each State listing there appear the names of all places having a 1950 population of 100 or more but which were not reported as having a community water supply. The purpose of this inventory is to furnish up-to-date information on all water facilities for the use of industries and other private agencies and all levels of government.

THE COST OF CLEAN WATER. VOLUME III. PLASTICS MATERIALS AND RESINS.
Industrial waste profiles.

12 Oct 67, 97p FWPCA-IWP-10
Contract DI-14-12-104

Descriptors: (*Plastics industry, *Industrial waste treatment), (*Water pollution, Plastics industry).
Identifiers: *Water pollution control.

This profile study of Standard Industrial Code (SIC) 28210 represents one segment of the total analysis of major contributors of water-borne pollution. The purposes of this profile study were (1) to identify, quantify and qualify processes and wastes, gross waste quantities, waste reduction practices, and waste reduction cost information, (2) to summarize these various facets of the waste picture, and (3) to make projections on future product growth. The major effort of the study involved the acquisition of first-hand organized information from the producers of plastics. Thus key production plants were visited, and the actual production facilities, in addition to the water renovation facilities, were physically surveyed.

INDUCED AERATION OF SMALL MOUNTAIN LAKES.
Water pollution control research series,
Lowell E. Leach, and Curtis C. Harlin, Jr. Nov 70, 58p EPA-WQO-16080-11/70
Paper copy available GPO $0.65 as EP1.16:16080-11/70.

Descriptors: (*Lakes, *Aeration), (*Stratification, Lakes), Nutrients, Oxygenation.
Identifiers: *Water pollution control, *Destratification.

Summer stratification in small mountain trout-fishery lakes restricts trout habitat to the thin layer of surface water. As atmospheric temperatures increase during later summer months, the epilimnion waters reach temperatures intolerable for trout. A technique of managing trout-fishery lakes, through introduction of compressed air, was studied at Lake Roberts in southern New Mexico during the summer of 1969. Research was conducted to determine the feasibility of induced aeration to control nutrient stratification and dissipation of high-bottom concentrations of hydrogen sulfide. The oxygenation efficiency of the induced aeration system was evaluated, and further research required for optimum development of the systems as management tools for trout-fishery lakes is discussed. WATER POLLUTION ASPECTS OF URBAN RUNOFF.
Final rept.
Jan 69, 270p WP-20-15
Contract FWPCA-WA-66-23
Report on the Causes and Remedies of Water Pollution from Surface Drainage of Urban Areas - Research Project No. 120.
Paper copy available from GPO $1.50 as 167.13/3:15.

Descriptors: (*Water pollution, *Surface water runoff), (*Urban areas, Surface water runoff), Storm water.
Identifiers: *Storm water runoff, *Urban hydrology, *Water pollution control.

A study was conducted to determine the factors in the urban environment which contribute to the pollution of urban storm water runoff and to determine methods to limit this source of water pollution. It was found that street refuse - litter - could be a significant factor when the nature of the shock discharge of the pollution is considered. An evaluation was made of the efficiency of street cleaning methods and limitations of commonly used equipment explored. Catch basins in conjunction with street inlets to the storm water disposal system were also determined to be a potential major source of pollution. Other potential sources of pollution considered included air pollution, roof discharges, and chemicals used in the urban environment. (Author Modified Abstract)

LABORATORY PROCEDURES FOR THE DIAGNOSIS OF INTESTINAL PARASITES,
Dorothy M. Melvin, and Marion M. Brooke. 1969, 153p PHS-Pub-1969
Paper copy available from GPO $2.75 as stock no. FS2.60/7:IN8/2.

Descriptors: (*Parasitic diseases, *Intestines), (*Parasitology, *Medical laboratories), Tests, Serology, Diagnosis, Nematoda, Protozoa, Platyhelminthes, Manuals.
Identifiers: *Laboratory diagnosis.

The manual is concerned with direct laboratory procedures used in recovery and identification of intestinal parasites and related species (atrial, bladder, and lung parasites) and with the collection of satisfactory specimens. Competent laboratory work is dependent on several factors: 1) personnel trained in examining specimens and accurately identifying organisms, (2) adequate laboratory facilities, including a good microscope, and (3) satisfactory specimens. The primary purpose of this manual is to present selected methods which can be used routinely in laboratories performing parasitologic examinations and which, when performed properly, are reliable and thorough.

DRINKING WATER QUALITY OF SELECTED INTERSTATE CARRIER WATER SUPPLIES, 1960-1961.

Jun 63, 188p PHS-Pub-1049
Errata sheet and Addendum inserted.

Descriptors: (*Water supply, *Water quality), (*Water treatment, Water quality), (*Potable water, Water quality), Inventories.
Identifiers: *Water quality data.

The drinking water quality of 176 selected interstate carrier water supply sources is being determined in a joint program conducted in 1960-1963 by municipalities, State health departments and the Public Health Service. Samples of water are being analyzed for organic chemicals, radiochemicals and trace elements and other determinations generally classed as sanitary chemical analyses. Samples are composite over a two-week period and collected of finished water at points believed to be most representative of water consumed by residents of the community. The project consists of taking two series of samples, of which this publication gives data on the first.

THE COST OF CLEAN WATER. VOLUME III. MEAT PRODUCTS. 1. MEAT PACKING. 2. POULTRY PROCESSING.
Industrial waste Profiles.

Sep 67, 148p FWPCA-IWP-8
Contract DI-14-12-103
Paper copy available from GPO $1.00 as I67.2:C82/Vol3/No8

Descriptors: (*Food processing, *Industrial waste treatment), (*Water pollution, Food processing).
Identifiers: *Poultry processing, *Meat packing, *Slaughtering house wastes, *Water pollution control.

The Industrial Waste Profiles were established to describe the source and quantity of pollutants produced by each of the ten industries studied. The profiles were designed to provide industry and government with information on the costs and alternatives involved in dealing effectively with the industrial water pollution problem. They include descriptions of the costs and effectiveness of alternative methods of reducing liquid wastes by changing processing methods, by intensifying use of various treatment methods, and by increasing utilization of wastes in by-products or water reuse in processing. They also describe past and projected changes in processing and treatment methods. This report is concerned with the meat packing and poultry processing industry.

Descriptors: (*Missouri River Basin, *Water pollution), (*Souris River Basin, *Water pollution), (*North Dakota, Water pollution), (*Minnesota, Water pollution), (*Montana, Water pollution), River basin development, Water resources.

The Missouri-Souris portion of the land and water resources development program for the Missouri River Basin calls for diversion of Missouri River water at strategic points for multipurpose use and to supplement available water in the Souris, Red, and James River Basins. The report covers the Missouri-Souris-Red area. A general section deals with over-all water supply and water pollution problems pertinent to the area and includes survey methods, review of State Water Pollution Control Law, conclusions and recommendations. The major sub-basins are discussed in detail in separate sections of the report. Pertinent detail infomation, laboratory and flow data, and other presentations are included as appendixes.

EMISSIONS OF OXIDES OF NITROGEN FROM STATIONARY SOURCES IN LOS ANGELES COUNTY. REPORT NO. 2. OXIDES OF NITROGEN EMITTED BY SMALL SOURCES.
Sep 60, 86p

Descriptors: (*Nitrogen oxides, Air pollution), (*California, *Air pollution), Industrial wastes, Sources, Furnaces, Iron and steel industry, Boilers, Combustion products.
Identifiers: *Los Angeles (California).

The project objective was to determine the total weight of oxides of nitrogen emitted into the atmosphere each day from non-moving sources of air pollution. The report discusses the evaluation of data obtained from tests made on small sources such as: Domestic and commercial gas appliances; Metallurgical furnaces; Non-metallurgical furnaces and kilns; Chemical process equipment; General industrial equipment; and Air pollution control equipment.

INTERSTATE ATMOSPHERIC TRANSPORT OF TRACER PARTICLES IN THE NEW YORK--NEW JERSEY METROPOLITAN AREA.
Technical rept.,
William H. Megonnell. Jan 58, 121p SEC-TR-A58-6

Descriptors: (*Air pollution, *New York), (*Air pollution, *New Jersey), (*Atmospheric motion, Air pollution).
Identifiers: *New York City Metropolitan Area.

The purpose of the project was to investigate the interstate transport of air pollutants in the New York-New Jersey area. Small amounts of an identifiable simulated atmospheric pollutant (fluorescent zinc cadmuim sulfide tracer material) were released in one State and recovered in the other. The interstate-transfer potential of air pollutants, in both directions, between the States of New Jersey and New York was clearly demonstrated. Dispersal patterns and flight paths of the tracer material were determined.

HANDBOOK OF SELECTED BIOLOGICAL REFERENCES ON WATER POLLUTION CONTROL, SEWAGE TREATMENT, AND WATER TREATMENT.
Bibliography Series,
William M. Ingram. 1953, 76p PHS-Pub-214, PHS-BS-8

Descriptors: (*Sewage treatment, Biology), (*Water treatment, Biology), (*Bibliographies, Biology).

These biological bibliographies may be found useful as pertinent references for those working in water pollution control, sewage treatment and water treatment. The bibliographies are by no means complete. The references in them were selected largely on their availability and for their potential usefulness to those not trained primarily in biology. These brief bibliographies can serve those in water pollution control programs, sewage treatment, and water treatment in unfolding information that may be basic to a good understanding of certain biological problems that could arise in the course of professional work. Marine waters are not considered.

HEALTH OF WORKERS IN CHROMATE PRODUCING INDUSTRY: A STUDY,
A. L. Koven, C. J. Buhrow, F. J. Walters, R. E. Bales, and C. D. Yaffe. 1953, 143p PHS-Pub-192

Descriptors: (*Carcinogens, Chromates), (*Occupational diseases, *Malignant neoplasms), (*Chromates, *Industrial medicine), (*Air pollution, Chromates), Industries, Bronchial neoplasms, Dusts, Eye diseases, Pulmonary fibrosis, Respiratory diseases, Mortality, Morbidity.
Identifiers: *Indoor air pollution, *Air pollution effects (Humans).

In recent years, suspicion has steadily increased of carcinogenic hazards in the chromate-producing industry. Although various theories have been advanced as to the causative agent believed to be responsible for bronchiogenic cancer in the industry, this agent has not been precisely identified. The results of the study constitute a contribution to knowledge in that they substantiate the existence of a cancer problem among chromate workers, help to identify the causative agents, and present methods of controlling the hazard.

STUDY REPORT ON A PILOT-PLANT CONICAL INCINERATOR,
William C. Achinger. 1970, 61p BSWM-SW-14ts

Descriptors: (*Waste disposal, Incinerators), (*Incinertors, Design), Performance evaluation, Air pollution, Water pollution.
Identifiers: *Solid waste disposal.

The incinerator tested, a pilot plant designed to process 1,000 lb of solid waste per hr, incorporated upper and lower duct sprays, a water scrubber, an afterburner, and, an electrostatic precipitator. These air pollution control devices could be operated independently or, to a degree, in series. Approximately 13 tons of waste were processed through the conical burner at a rate of 1,430 lb/hr. After incineration, the total residue as sampled was approximately 6,800 lb with a heat content of 180 Btu/lb. Incinerator design and methods used to collect and analyze solid waste samples or residue are given.

SEWER AND SEWAGE TREATMENT PLANT CONSTRUCTION COST INDEX.

Dec 67, 65p CWT-1

Descriptors: (*Sewage treatment, *Construction costs), Cost estimates, Indexes (Ratios).
Identifiers: *Sewage treatment plants.

Construction costs for sewers and treatment plants have risen steadily since the mid 1930's. Rates of increase vary among the different construction elements such as labor, materials and equipment, as well as for different types of construction. Contract award data have proven useful for evaluating progress in the construction of sewers and treatment plants. During a period of rising costs, however, such data need to be adjusted to a standard base to assure comparability. This can be done through the use of an appropriate construction cost index. The report presents such an index.

WATER QUALITY CONSERVATION ARKANSAS-RED RIVER BASINS. SUMMARY REPORT ON BASIC STUDY OF WATER QUALITY. SOURCES OF NATURAL AND MANMADE SALT POLLUTION, AND SUGGESTED CORRECTIVE MEASURES.

Mar 64, 75p

Descriptors: (*Arkansas River Basin, *Water pollution), (*Red River Basin, *Water pollution), (*Kansas, Water pollution), (*Oklahoma, Water pollution), (*Texas, Water pollution), Minerals, Inorganic salts.

Intensive study and investigation of mineral pollution and its causes, both natural and manmade, were carried out on the Arkansas and Red Rivers together with their tributaries in the middle third of the basins. The study covered water years 1961 and 1962. The investigations of benefits considered the impact of water quality improvement on municipal, industrial, and agricultural water uses. The evaluation was extended to include areas immediately adjacent to, and forming an integral part of economy of, the Arkansas-Red River basins. The evaluation extended through the year 2070, with emphasis on the 1970-2020 period. (Author)

WATER PHENOLS NO. 1.
Environmental health series,
Earl F. McFarren, John M. Matthews, and Raymond J. Lishka. 1967, 55p PHS-Pub-999-WP-43, PHS-ARS-Study-28

Report of a study conducted by the Analytical Reference Service.

Descriptors: (*Water analysis, *Phenols), (*Water pollution, Phenols), Standards, Accuracy.
Identifiers: *Water pollution detection, *Phenol/dichloro.

The objective of the study was to evaluate the ability of methods to quantitatively measure a low concentration of a mixture of phenols. The study consisted of four concentrated solutions shipped in sealed glass ampoules to various laboratories. The participants were instructed on receipt to dilute 5 ml of each sample to 1 liter with a good quality (phenol free) distilled water, and were informed that the samples would then contain concentrations of phenol and 2,4-dichlorophenol in the range of 1.0 to 200 microgram per liter. The distillation and chloroform extraction (of the final color) method will measure the phenol content of a sample very accurately and precisely, but it is not as sensitive as is desired. On the other hand the simplified aminoantipyrine method will measure neither phenol nor 2,4-dichlorophenol very accurately or precisely.

Public Health Service, Cincinnati, Ohio. Div. of Water Supply and Pollution Control.
AN INDUSTRIAL WASTE GUIDE TO THE CANE SUGAR INDUSTRY.

1959, 24p
Prepared in cooperation with American Sugar Cane League and National Technical Task Committee on Industrial Wastes.

Descriptors: (*Food processing, *Industrial waste treatment), (*Sugarcane, Food processing).
Identifiers: *Cane sugar industry, *Water pollution control.

In the Cane Sugar Industry, as in many other industries, control and disposal of wastes is of major concern. There are two important reasons for increased attention to these problems: First, the greatest possible recovery, use, and reduction of wastes is necessary for most economical production in small as well as in large plants. Second, protecting the Nation's limited water resources for maximum use is essential to our health and continued economic growth. Stream pollution control is mutually beneficial to industry, the individual citizen, and the Nation as a whole. Thus, wastes which cannot be eliminated must be disposed of in a manner which will not impair the usefulness of stream waters for other beneficial purposes. The Industrial Waste Guide to the Cane Sugar Industry is intended primarily to assist the operators and managers of cane sugar factories to utilize, reduce, and otherwise suitably dispose of waste waters. A STUDY OF THE EFFECT OF SEWAGE DISTRIBUTION ON HIGH RATE FILTER EFFICIENCY,
W. Q. Kehr, C. C. Ruchhoft, and W. Scott Johnson. Dec 47, 44p

Descriptors: (*Sewage treatment, *Trickling filtration).
Identifiers: *Neosho sewage treatment plant.

A study was made of the effect of sewage distribution on the efficiency of high rate sewage filters at Neosho, Missouri. The Neosho municipal sewage treatment plant has two parallel, high-rate filters of the Aerofilter type and was designed for a population of 12,000 and a population equivalent of 22,500, the industrial wastes consisting principally of the wastes from a large milk condensery. The first period of study extended from March 19 to April 11, 1945, and the second from July 12 to August 8. Twenty 24-hour composite and five 4-hour composite samples were collected and analyzed from each sampling point during the first period and twenty-four 24-hour composite and two 4-hour composite samples during the second. In addition, grab samples were collected for analysis during both periods for dissolved oxygen, B.O.D. of the digester supernatant, and special determinations.

THE INFLUENCE OF CAPILLARITY ON THE FLOW OF WATER AND AIR IN A POROUS MEDIUM.
Technical rept.,
Donald Dean Adrian. Jun 64, 170p TR-38
Grant PHS-WP-00246

Descriptors: (*Hydrogeology, Gas flow), (*Ground water recharge, Gas flow), Compression, Mathematical models, Theses.

In the usual analysis of the flow of water into a porous medium, such as infiltration into a soil, air resistance is neglected. Obviously as water moves into the air-filled pores air must be driven out. In most cases the air flows with a negligible resistance compared to the resistance of water to flow. However, if the air escape route deeper into the medium is blocked by an impermeable barrier, the air will be trapped and its pressure will increase as the combined action of gravity and capillary forces try to force the air from the pores. This air pressure build-up will decrease the infiltration rate below the rate predicted from measurements of the permeability of the medium and its capillary characteristics. The report presents a mathematical analysis of this effect.

UTILIZATION OF THE MILK ORDINANCE AND CODE RECOMMENDED BY THE U.S. PUBLIC HEALTH SERVICE.
Jan 63, 31p PHS-Pub-1018

Descriptors: (*Milk, *Food sanitation), (*Regulations, Food sanitation).

The States and their political subdivisions which have utilized the Public Health Service Milk Ordinance and Code as the basis of their milk sanitation law or regulations, and the number of county and municipal adoptions by States, are shown in both tabular and chart form. Also presented are the following: A chronological summary of adoptions of milk sanitation laws or regulations based on the milk ordinance and code recommended by the Public Health Service; A geographical summary of adoptions of milk sanitation laws or regulations based on the milk ordinance and code recommended by the Public Health Service; List of American communities in which the milk ordinance recommended by the Public Health Service is in effect; and A list of states, counties, and municipalities in the United States which require compulsory pasteurization of market milk.

WATER QUALITY CONSERVATION ARKANSAS-RED RIVER BASINS APPENDIX. VOLUME II. WATER QUALITY DATA. PART I: MONTHLY SUMMARY OF CONTINUOUS RECORDED FLOW AND QUALITY DATA CHEMICAL ANALYSES OF NATURAL BRINE SOURCES .
Mar 64, 241p

Descriptors: (*Arkansas River Basin, *Water pollution), (*Red River Basin, *Water pollution), (*Colorado, Water pollution), (*Kansas, Water pollution), (*Oklahoma, Water pollution), (*Arkansas, Water pollution), (*Louisiana, Water pollution).
Identifiers: *Water quality data.

The compilation of water quality data collected during the 27-month period of intensive study (July 1960 through September 1962) of the Arkansas-Red River Basins Water Quality Conservation Project is presented in five parts. These data were gathered to provide a basis for (1) location and definition of the significant natural and manmade sources of slat (mineral) pollution, and (2) determination of the effects of these sources on the quality of water in the receiving streams. The intensive investigation of water quality and natural sources of mineral pollution was limited to the central portions of both basins, the area in which major salt sources exist, and mineral pollution is most severe. Stream quality monitoring consisted of continuous specific conductance recording combined with continuous flow measurement. Weekly grab samples were collected and analyzed to provide a basis for correlation of specific conductance with dissolved solids, chlorides, and sulfate concentration. In addition, samples were collected for trace elements and radioactivity analyses. (Author Modified Abstract)

WATER QUALITY EVALUATION OF THE BLUESTONE PROJECT, COLORADO.

Dec 69, 23p

Descriptors: (*Colorado, *Reservoirs), Water resources, Water quality.
Identifiers: *Mount Logan Reservoir, Garfield County (Colorado), Mesa County (Colorado).

The water quality evaluation has been prepared for the Bureau of Reclamation, Region 4, U. S. Department of the Interior, Salt Lake City, Utah, for inclusion in their feasibility report for the Bluestone Reservoir Project, Colorado. The primary purposes of this evaluation are: To determine the need for and value of separable reservoir storage for streamflow regulation to control water quality; To assess the overall impact of the proposed development on water quality, both in and outside the Project area; and To recommend, where applicable, water quality control measures for the project. OPERATIONAL DEMONSTRATION OF OXIDATION DITCH METHOD OF WASTE TREATMENT.
Progress rept. 1 May 67-30 Apr 68,
Harry M. Kaneshige. 21 May 68, 108p
Grant WPD-100-02-67

Descriptors: (*Sewage treatment, *Lagoons (Ponds)), Channels (Waterways).
Identifiers: *Aeration ponds.

A statistical optimization method was developed for the systems analysis of the project on a sewage treatment effluent oxidation ditch. The results of the analysis are presented as three separate papers in the Appendix. Chlorination studies on batch samples in the laboratory were made. Biochemical oxygen demand reaction rate constants of 0.131 per day for raw wastewater and 0.078 per day for final effluent were obtained. Samples of raw wastewater, final effluent, mixed liquor, return sludge, and stream water were routinely analyzed two or three times weekly. Averages and ranges of values for the various laboratory analyses are presented. (Author)

THE ECONOMICS OF CLEAN WATER. VOLUME 3. INORGANIC CHEMICALS INDUSTRY PROFILE.
Mar 70, 482p
Contract DI-14-12-592
Paper copy available from GPO $3.50 as I67.1/2:970/v3.

Descriptors: (*Industrial waste treatment, *Economic analysis), (*Chemical industry, Industrial waste treatment), Cost estimates, Manpower, Requirements.
Identifiers: *Water pollution economics.

The primary objective of the study was to acquire data and develop cost estimates on the waste treatment practices of selected industrial categories within the inorganic chemicals industry over the 1970 to 1974 period, and to develop manpower planning criteria for each of the waste treatment practices identified. A secondary objective of the study was to further test and refine as necessary the generalized methodology for establishing and projecting industry costs which was developed in the course of work 'Projected Wastewater Treatment Costs in the Organic Chemicals Industry.' A generalized framework for analyzing waste treat-

ment practices has been provided. (Author Modified Abstract)

EFFECTS OF IMPOUNDMENTS ON WATER QUALITY IN THE SOUTHWEST. DISCUSSION - BACTERIAL CYCLES AND WATER QUALITY.
Report for period 1 Dec 66-31 Aug 69,
Rufus K. Guthrie. 31 Aug 69, 58p
Grant WPD-146-01
Includes reprint, Bacterial Cycles and Water Quality, published in Southwest Water Works Jnl., v 50 p 54-56 Oct 68.

Descriptors: (*Reservoirs, *Bacteria), (*Water pollution, Bacteria), Seasonal variations.

In the determination of bacterial counts for the detection of cycles of presence in a large body of water, one must take into account several sources of error, such as a period of heavy rainfall, producing extensive runoff into the water impoundment. A study on bacterial presence in one water impoundment for a period of 1 1/2 years indicated that this influx of bacterial population does not alter the overall pattern of cycles which may be present.

AIR POLLUTION MEASUREMENTS OF THE NATIONAL AIR SAMPLING NETWORK. ANALYSIS OF SUSPENDED PARTICULATE SAMPLES COLLECTED 1953-1957.

1958, 263p

Descriptors: (*Air pollution, *Particles), (*United States, Air pollution), Tables (Data).
Identifiers: *Air quality data.

The report covers the first five years of operation of the U.S. Public Health Service's National Air Sampling Network. It has been designed to present basic data on suspended particulate matter in the air over the United States. Much of its content consists of tables which present this information. The various text sections reflect the second purpose of this report: to provide the technical information necessary for the establishment of similar or identical sampling stations in community, area, or State Networks throughout the United States by appropriate agencies. For this reason, data concerning the statistical and chemical procedures used in the Network have been presented in greater detail than probably would have been necessary for an evaluation of the results.

REGISTER OF AIR POLLUTION ANALYSES AS OF JANUARY 1, 1956.
1958, 349p PHS-Pub-610

Descriptors: (*Air pollution, *United States), Tables (Data).
Identifiers: *Air quality data.

Many workers concerned with the problems of community air pollution have recognized the need of assembling in one reference the scattered information relating to past air pollution surveys that exist in the literature of libraries and in files of control agencies, health department, universities and research institutions. The Register of Air Pollution Analyses has been prepared as a step toward filling this need. Contained within the Register is a record of community air sampling and analyses performed in the United States and the Territories of Alaska and Hawaii prior to January 1, 1956. More than 100 different chemically definable individual pollutants or constituents of mixed ones, such as dustfall, are listed for 200 cities in 110 counties of 32 states and territories.

ADSORPTION OF BIOCHEMICALLY RESISTANT MATERIALS FROM SOLUTION. 1.
Environmental health series,
J. Carrell Morris, and Walter J. Weber, Jr. May 64, 92p AWTR-9 PHS-Pub-999-WP-11
Contract SAph-76295

Descriptors: (*Activated carbon treatment, Organic compounds), (*Sewage treatment, Activated carbon treatment).

The Advanced Waste Treatment Research Program of the Public Health Service has two ultimate goals: One is to help abate our Nation's growing water pollution problems, and the other, more startling in concept, is to renovate waste water for direct and deliberate re-use. Conventional water and waste treatment practices have little or no effect on many simple inorganic salts and permit an ever-increasing number and amount of highly complex, synthetic organic wastes to contaminate drinking water supplies. The present report describes the experimental program on the Kinetics of adsorption on granular carbon as a further investigation for waste and water treatment.

SURVEY OF COMPOUNDS WHICH HAVE BEEN TESTED FOR CARCINOGENIC ACTIVITY. SUPPLEMENT I.
Philippe Shubik, and Jonathan L. Hartwell. 1957, 390p PHS-Pub-149
Prepared in cooperation with Chicago Medical School, Chicago, Ill.

Descriptors: (*Carcinogens, *Reviews).

This supplement to Survey of Compounds Which Have Been Tested for Carcinogenic Activity has retained the format of the previous two editions with some minor modifications. Radioactive materials have not been included on this occasion because it was felt inappropriate to classify these materials on the basis of their chemical structure rather than physical properties. It can be seen that the proportion of carcinogens among the new compounds (21%) is similar to that found before (23%). In view of the greatly increased interest in carcinogenesis as a problem of human environmental cancer, it is of great importance to analyze the significance of this proportion.

Report of Monongahela River Mine Drainage Remedial Project, Upper West Fork River Sub-Basin, W.Va. See also Part II, PB-216 238.

Descriptors: (*Coal mines, *Sealing), (*Water pollution, Mine water), Grouting, Seismic surveys, West Virginia.
Identifiers: *Water pollution control, *Mine acid drainage.

The initial phase of this project involved the studies and investigations performed in the exploration of drift mines in the Upper West Fork River Sub-basin, West Virginia. Included as a part of the study was the application of various grouting agents and techniques to the abatement of mine drainage pollution. Part IV of the project is a modification of the original contract for the purpose of conducting additional field tests on methods and materials not previously evaluated in this project. The Part IV program includes an experimental test program, a seismic survey and study, and field construction tests and evaluation. The experimental test program was conducted for the purpose of determining improvements in techniques and materials previously used for remedial applications as well as consideration of different techniques which might be evaluated in field tests. The seismic survey and study included was for the purpose of locating hidden mine openings or thin high wall sections by seismic methods.

INCENTIVES TO INDUSTRY FOR WATER POLLUTION CONTROL: POLICY CONSIDERATIONS.
Dec 67, 109p
Contract DI-14-12-138

Descriptors: (*Water pollution, Abatement), (*Industries, Water pollution), Cost analysis, Economic analysis.
Identifiers: *Water pollution abatement, *Tax incentives.

The study is an examination of alternative possible approaches for providing incentives to industry to comply with the pollution abatement standards being created under the Water Quality Act of 1965 and the Clean Water Act of 1966. The study is limited chiefly to manufacturing industry, although there are significant water pollution problems associated with aspects of mining and agriculture as well. The primary focus of the technological analysis is on the problems of organic and inorganic wastes, rather than thermal pollution. Among industrial incentives, it proved impossible to limit consideration to only a few obvious alternatives. In addition to the more straightforward devices like tax incentives, grants, and loans, less direct approaches were also examined, most notably the creation of treatment authorities for a whole area, river basin, or the part of such a basin within a single state. In addition, it became necessary to examine the problem of possible hardship cases, and the question of whether or not

the existing supply of men and material is adequate to produce and maintain the expanded amount of treatment capacity planned under the law. Also included in the report is extensive consideration of the nature of river hydrology and of some aspects of waste abatement technology.

A REPORT ON THE EXAMINATION OF THE WASTE TREATMENT AND DISPOSAL OPERATIONS AT THE NATIONAL REACTOR TESTING STATION, IDAHO FALLS, IDAHO.
Oct 69, 106p
Prepared in cooperation with Idaho Dept. of Health Boise, Idaho.

Descriptors: (*Nuclear reactors, Water pollution), (*Water pollution, *Snake River), Idaho, Radioactive contaminants.

The report reviews and evaluates the existing waste management operations at the National Reactor Testing Station to determine whether any additional pollution control systems or procedures are necessary or desirable to improve or protect water quality. The NRTS is located near the eastern end of the Snake River Plain in southeastern Idaho. Recommendations for additional water pollution control practices are made to improve and protect the water quality in the Snake Plain Aquifer. They include elimination of disposal wells that discharge waste directly into the ground water supply, the elimination of the use of seepage ponds for the disposal of chemical wastes, and the improvement of some sanitary waste treatment systems.

SOIL ABSORPTION SYSTEMS IN HOUSEHOLD SEWAGE DISPOSAL,
T. W. Bendixen. 1952, 21p
Presented at the American Society of Sanitary Engineering Refresher Course, held at Miami, Fla., on 16 Nov 52.

Descriptors: (*Septic tanks, *Soil properties).

A septic tank-soil absorption system under favorable environmental circumstances is a satisfactory method of residential sewage disposal. Under unfavorable environmental circumstances and if carelessly designed and constructed, such systems are a source of embarrassment and expense to the home owner as well as a problem to the authorities. Soil absorption systems have apparently resulted from a gradual evolution from a privy, to a cesspool, to a seepage pit and to a trench type system. The report discusses the testing and problems of soil absorption.

Presented before the Water and Air Session of the Laboratory Section 1 Nov 60.

Descriptors: (*Disinfectants, Effectiveness), (*Water treatment, *Disinfection), Viruses.

In view of the outbreak of water-borne infectious hepatitis in New Helhi, India, reported in 1960, and the discovery of more than 70 new human enteric viruses, it seems appropriate to review the information available regarding the viricidal efficiencies of disinfectants in water.

POLLUTION CONTROL COUNCIL, PACIFIC NORTHWEST AREA. WATER QUALITY OBJECTIVES.
Nov 66, 36o

Descriptors: (*Pacific Northwest, *Water pollution).

How good is this water. How bad is that water. Will other uses be affected if this treated waste is discharged to this stream. These wastes have been going in here for twenty years and haven't hurt anyone; why do we have to stop now. Pollution control personnel are making decisions daily on these and similar questions. In the Pacific Northwest area many of these decisions had as their basis the Water Quality Objectives and Minimum Treatment Requirements promulgated

in 1952 by the Pollution Control Council. It is the basic purpose of the report to set forth updated and revised water quality objectives which can be used as bases for decision-making.

CHEMICAL OXYGEN CONSUMED AND ITS RELATIONSHIP TO B.O.D,
W. Allan Moore, and C. C. Ruchhoft. 24 Oct 50, 22p
Presented at the Kentucky-Tennessee Industrial Wastes and Sewage Works Association Meeting, held at Memphis, Tenn., on 23-25 Oct 50.

Descriptors: (*Water analysis, *Oxygen).
Identifiers: *Chemical oxygen demand.

The oxidation of organic compounds contained in sewage and polluted water has interested workers in the field of sanitary science for a number of decades. The biochemical oxygen demand (BOD) determines the quantity of oxygen required for biochemical stabilization when a sewage or industrial waste is discharged into a surface water. However, the oxygen consumed test is a measure of the chemical oxidant required to oxidize the organic matter under very special and unnatural conditions, i.e., high acidities and temperatures. The report reviews the test for oxygen consumed and its use in analyzing sewage, industrial wastes, and pollution streams.

ULTIMATE DISPOSAL OF ADVANCED WASTE TREATMENT RESIDUES,
Robert B. Dean. 23 Oct 68, 5p
Presented at the Water and Air Conference of the Technical Association of the Pulp and Paper Industry, held in Portland, Oreg., 1-3 Apr 68. Revision of report dated 13 Jun 68. Pub. in Tappi, v52 n3 p457-461 Mar 69.

Descriptors: (*Sewage treatment, *Waste disposal), Sludge disposal.
Identifiers: *Solid waste disposal.

Advanced waste treatment processes include methods for removing pollutants such as nutrients, suspended matter, dissolved organics, and salts from waste water and concentrating them in a waste stream. Pollutants that are removed from waste waters must be treated so that they will not interfere with the intended use of the environment. The elements of polluting substances may be placed in the air, either on or under the land, and in the oceans. Preliminary conversion to innocuous or nonextractable forms is necessary. (Author)

THERMAL REGENERATION OF SPENT POWDERED CARBON USING FLUIDIZED-BED AND TRANSPORT REACTORS,
Edward L. Berg, Roland V. Villiers, Arthur N. Masse, and Lawrence A. Winslow. 1970, 12p
Availability: Pub. in Chemical Engineering Progress. Symposium Series, v67 n107 p154-164 1970.

Descriptors: (*Activated carbon treatment, *Sewage treatment), (*Activated carbon, Regeneration (Engineering)), Fluidized bed processes.

Adsorption on powdered activated carbon has been proven to be a feasible method for removing the bulk of the dissolved organic materials from a municipal secondary effluent. The cost of the carbon is such that it must be regenerated and reused. A transport reactor and a fluidized-bed regeneration furnace were evaluated at the Federal Water Quality Administration's pilot plant at Lebanon, Ohio, regnerating carbon from a 10-gal./min. adsorption system. The carbon was regenerated to near virgin capacity by both furnaces. Physical losses in both systems were near 15%. Operating difficulties with the transport reactor furnace led to the selection of the fluidized-bed furnace for further development. (Author)

A REPORT OF SPHAEROTILUS GROWTHS IN THE LOWER COLUMBIA RIVER. 1955, 1956, AND 1957.
15 Oct 58, 103p

Descriptors: (*Columbia River, *Sphaerotilus), (*Water pollution, Columbia River), (*Oregon, Water pollution), (*Washington (State), Water pollution), Bacteria, Industrial wastes.
Identifiers: *Water quality data.

Field studies have shown that growth of Sphaerotilus is triggered into nuisance concentrations during certain seasons of the year between Camas and Longview in the Columbia River and between Oregon City and Upper Portland Harbor in the Lower Willamette River. Floods and freshets influence the growth. At such times growths are loosened en masse and transported many miles to points downstream. Moreover, high water and floods shorten time of flow to downstream points so that transportation of nutrients occurs over much longer distances and the range of active slime growth is extended accordingly. The sulfite pulp mills were found a major contributor to the production of Sphaerotilus and associated slimes in the Columbia River. Kraft mills, canneries and domestic sewage are other lesser contributors.

REVERSE OSMOSIS TREATMENT OF CONCENTRATED FERROUS IRON ACID MINE DRAINAGE,
Roger C. Wilmoth, and Robert B. Scott. Aug 70, 16p

Descriptors: (*Osmosis, *Mine waters), (*Water pollution, Mine waters), Iron.
Identifiers: *Mine acid drainage, *Water pollution control, *Reverse osmosis.

A 4,000 gpd reverse osmosis unit was tested on a severely polluted ferrous iron acid mine discharge near Morgantown, West Virginia. The water recovery rate was limited to fifty percent due to membrane fouling problems. The role of ferrous iron fouling could not be identified because of a predominance of calcium sulfate precipitation on the membranes. The feasibility of reverse osmosis treatment is doubtful for mine drainage having concentrations of acidity, iron, sulfate, and calcium as high as 5,000 mg/l, 2,300 mg/l, 10,000 mg/l and 525 mg/l, respectively, due to the membrane fouling problem, maximum recoveries of only 50 percent, and the non-potable quality of the product water. EXTENDED-AERATION SEWAGE TREATMENT: A PRELIMINARY EVALUATION.
Technical rept.
1960, 48P SEC-TR-W60-6
Report on Waste Treatment Studies.

Descriptors: (*Sewage treatment, Aeration), (*Activated sludge process, *Aeration).
Identifiers: *Sewage treatment plants.

The Public Health Service initiated a project to evaluate the experience of the States with 'extended aeration' plants and to collect and review available data and performance records. The study was limited to plants of 20 to 2,500 population equivalent utilizing the extended-aeration process. Laboratory data from 59 of the 1,224 plants form the basis of the performance evaluation. Extended-aeration plants with proper design, maintenance, and operation can effect high BOD reductions. Records show a wide range of efficiencies with an average of 86 percent BOD removal. Suspended solids removal is less, averaging 62 percent and ranging from 0 to 96.5 percent.

TASTE AND ODOR PRODUCING COMPONENTS IN PETROLEUM REFINERY GRAVITY OIL SEPARATOR EFFLUENTS,
C. C. Ruchhoft, F. M. Middleton, Harry Braus, and Aaron A. Rosen. Mar 53, 27p
Presented at the National Meeting of the American Chemical Society (123rd), Los Angeles, Calif., 15-19 Mar 53.

Descriptors: (*Water pollution, *Taste), (*Odors, Water pollution), (*Refineries, Water pollution).

The control of tastes and odors in drinking waters obtained from surface water sources is a major problem in water purification. Tastes and odors in surface waters may come from aquatic plants such as algae natural land drainage, and the discharge of domestic sewage and industrial wastes. The odor bearing materials, largely organic, may undergo physical and chemical changes as a result of sedimentation, vaporization, oxidation, temperature and light effects, and biochemical action. The study was undertaken to determine the types and quantities of materials present in petroleum refinery gravity oil separator effluents that contribute to taste and odor when discharged into surface waters used as drinking water sources. SPECTROPHOTOMETRIC DETERMINATION OF BUTENES AND HIGHER MOLECULAR WEIGHT OLEFINS IN COMBUSTION GASES AND IN THE ATMOSPHERE.
A. P. Altshuller, and S. F. Sleva. 1961, 46p

Descriptors: (*Gas analysis, *Alkene hydrocarbons), (*Air pollution, Alkene hydrocarbons), Exhaust gases, Colorimetric analysis, Spectroscopic analysis.
Identifiers: *Air pollution detection.

Four-carbon and higher molecular weight olefins can be quantitatively determined in the gas phase by reaction with p-dimethylaminobenzaldehyde in concentrated sulfuric acid, heating at 100 degrees, and measurement of the absorbance at 500 micrometers. The absorptivities are such that 0.1 ppm or less of gaseous olefins can be determined. Interference by formaldehyde is appreciable. Excess amounts of aromatic hydrocarbons and phenols interfere somewhat in the procedure. Simple methods for removing possible interferences in gas mixtures are discussed. The method has been applied to the analysis of automobile exhaust and diluted irradiated exhaust mixtures. (Author)

FOAM FRACTIONATION WITH REFLUX.
Progress rept. 1 Sep 64-30 Nov 66,
Robert Lemlich. 1 Dec 66, 61p
Contract FWPCA-WP-00161

Descriptors: (*Flotation, *Chemical engineering), Theories.
Identifiers: *Foam fractionation.

The theoretical model for foam drainage and overflow, which was developed earlier, was tested in detail against experimental data. This data was gathered from foam fractionation columns, the operation of which included reflux, no reflux, pool feed, and foam feed. The test yielded good agreement. The theory was also tested against experimental data for stationary foam draining at steady state. This too yielded good agreement. The theoretical model was then extended to stationary foam in unsteady state drainage by combining it with a differential mass balance and suitable boundary conditions. A comparison of theoretical prediction with experimental measurement indicated that the effect of bubble coalescence in the foam can be very important in this situation. (Author)

DETERGENTS AS THEY AFFECT THE SEWAGE TREATMENT PLANT,
Archie E. Becher, Jr. 1957, 28p
Presented at the Arkansas Water and Sewage Conference Annual Meeting, Little Rock, Ark., 18 Mar 57.

Descriptors: (*Sewage treatment, *Detergents), Retarding, Surfactants.

Frothing which is both a hazard and a nuisance, has frequently been associated with increased detergent use. Froth control may be accomplished by plant operational methods, sprays, defoamers, or a combination of these devices. Foam control of any kind costs money and determination of the best type of control depends on the individual plant. Evidence has been presented, in spite of some disagreement in the field, to indicate that detergents do interfere with sedimentation, coagulation, trickling filters, the activated sludge process, and sludge digestion. It does appear that different detergents have different effects on the treatment processes, and that the activated sludge process is most susceptible to their interference.

MEMORANDUM ON THE DETERMINATION OF PHENOLS IN THE MIXED WASTE FROM A CHEMICAL MANUFACTURING PLANT,
C. C. Ruchhoft, W. A. Moore, and R. C. Kroner. 1 Aug 49, 7p

Descriptors: (*Chemical industry, Water pollution), (*Water pollution, Phenols), (*New York, Water pollution).
Identifiers: *Buffalo (New York).

At a meeting on March 22, 1949 in the offices of the National Aniline Company at Buffalo, New York, attended by representatives of the National Aniline Company; the Public Health Service; the State of New York, and the Buffalo Sewer Authority, the analytical values for phenols in a report of the Buffalo Sewer Authority were discussed. Representatives of the National Aniline Company were of the opinion that the calculated phenol contributions from the wastes given in this report were too great. Exception was also taken to the quantity of cyanide that was attributed to the wastes from the plant. To clarify the values for cyanide and phenol, it was agreed that samples of the waste in question would be submitted to the Environmental Health Center. The results of these tests are presented.

ACTIVATED SLUDGE TREATMENT OF CYANIDE, CYANATE AND THIOCYANATE,
F. J. Ludzack, and R. B. Schaffer. 1960, 32p
Presented at the Industrial Waste Conference (15th), Lafayette, Ind., 2-5 May 60.

Descriptors: (*Activated sludge process, *Cyanides), (*Sewage treatment, Cyanides), (*Cyanates, Sewage treatment), (*Thiocyanate, Sewage treatment), (*Chemical removal (Sewage treatment), Cyanates).

Cyanide, cyanate, and thiocyanate, separately or in combination with other wastes, frequently are waste water problems. Several treatment methods are available for cyanide; some lack the desired efficiency, others are difficult to control, and all have high operating costs. Little information is available on the biological degradation of cyanates. Thiocyanate pollution has a long history but its characteristics commonly are misunderstood or ignored; lower treatment efficiency follows. Since the three anions are related in chemistry, in industry, and in waste control, a group comparison should bring out certain aspects of the individuals that might otherwise be unnoticed. The report discusses the authors' research in this area.

Contract DI-14-12-146
Errata sheet inserted.

Descriptors: (*Sewers, *Sealing), (*Fluid infiltration, Sewers).

The objective of the program was to develop new, more effective sealants for sewer line leaks (leaking joints, cracks and large holes). This purpose was achieved, and all equipments and materials investigated, tested and compared are presented, along with the test results, supporting data, conclusions and recommendations. A wide range of candidate materials was surveyed, and weaknesses of rejected materials were noted. Cost/effectiveness of the new sealant materials was compared with that of present sealant materials. It was concluded that infiltration adversely influences sewer system operating costs and effectiveness, and that leakage repair systems are limited in their effectiveness. (Author Modified Abstract)

Federal Water Quality Administration, Portland, Oreg. Northwest Region.
AN EVALUATION OF SALMONID HATCHERY WASTES,
Danforth G. Bodien. Oct 70, 54p

Descriptors: (*Fisheries, *Water pollution), Salmon, Aquaculture.

Throughout the Northwest Region 114 State and Federal hatcheries produce an estimated 8.6 million pounds of salmonid fish annually. In addition, the Region contains numerous private hatcheries and fish farms. In the Hagerman Valley alone such hatcheries produce over 4.5 million pounds annually with a developmental potential of 20 million pounds. Large quantities of water are utilized in raising fish, and generally the water used is discharged without treatment to the receiving stream. In most cases no problems have been associated with this method of operation. Within the past few years, during low summer flows, however, wastes discharged from some hatcheries have created nuisance conditions in receiving waters. The report attempts to define the problem and recommends methods for correction. (Author Modified Abstract)

MANPOWER NEEDS AT WATER POLLUTION CONTROL FACILITIES IN NEW ENGLAND.
Paul Ferraro. Jun 69, 58p CWT-10-10

Descriptors: (*New England, Manpower), (*Sewage treatment, *Manpower), Requirements.

The Federal Water Pollution Control Administration has evaluated the manpower and training needs of treatment plant operators in New England. The purpose of the survey was to gather information on the existing manpower resource,

salaries, and previous training of operators responsible for the operation of control facilities. Specifically, the report presents an estimate of the existing manpower resource and future needs; compares the salaries of operators with those in comparable occupations; evaluates existing and future training needs; assesses present certification and recruitment programs; and makes recommendations for action to meet the manpower requirements for effective, efficient operation of water pollution control facilities in New England. ILLUSTRATIONS OF FRESH WATER ALGAE TOXIC TO ANIMALS,
William Marcus Ingram, and G. W. Prescott. Jun 52, 11p

Descriptors: (*Algae, *Toxicity), (*Cyanophyta, *Bibliographies), Aquatic plants, Freshwater biology, Animals, Fishes.
Identifiers: Microcystis, Anabaena, Aphanizomenon, Nodularia, Gloeotrichia, Coelosphaerium.

The algae that have been reported as causing death and, or, illness in domestic animals, fish, and wildlife through toxic action action are, as far as are known, the blue-greens, Cyanophyta. The genera of the Cyanophyta that appear to possess toxic species are: Microcystis, Anabaena, Aphanizomenon, Nodularia, Gloeotrichia, and Coelosphaerium whose illustrations are presented.

REPORT ON POLLUTION OF THE HUDSON RIVER AND ITS TRIBUTARIES.

Sep 65, 101p

Descriptors: (*Hudson River Basin, *Water pollution), (*New York, Water pollution).
Identifiers: *Water quality data.

The entire Hudson River, from the Albany-Troy-Rennsselaer area to the Narrows, can be categorically described as polluted. The pollution from the equivalent of more than 10,000,000 persons is discharged to the river in this area. 43% of this is discharged without any treatment or the equivalent of the waste of 4,217,000 people. 38% receive primary treatment. The report includes a description of the area, water uses, source of waste, water quality, and water pollution effects.

WATER POLLUTION PROBLEMS AND IMPROVEMENT NEEDS LAKE ONTARIO AND ST. LAWRENCE RIVER BASINS.

Jun 68, 129p

Prepared in cooperation with New York State Dept. of Health, Albany. Div. of Pure Waters.

Descriptors: (*Water pollution, *Lake Ontario), (*Water pollution, *Saint Lawrence River Basin).

The report summarizes the water pollution problems of the United States water of Lake Ontario and the St. Lawrence River and their tributaries. It identifies the causes of these problems or sources of pollution, discusses the improvements needed, and presents a program of recommended actions. The report is based on extensive field and office studies, initiated in 1964 and still continuing, by the Federal Water Pollution Control Administration's Rochester Program Office; and on information of the New York State Department of Health.

ESTIMATING DIFFUSION CHARACTERISTICS OF TIDAL WATERS,
Hetling, and O'Connell. May 65, 12p CB-SRBP-Technical paper-4

Descriptors: (*Potomac River, Tidewater), (*Estuaries, *Tidewater), Mixing, Mathematical models, Diffusion.

Both the four-thirds law and random process analogy formulas yield effective diffusion coefficients in the proper order of magnitude for the brackish portion of the Potomac Estuary. Either of these formulas should provide useful approximations for other estuaries where good information on salinity variations is not readily available. These formulas should be used with caution in the fresh water portion of tidal rivers, in view of the possible important influence of salinity gradient induced density currents on diffusion. Prototype tracer studies in such locations appear to be necessary to provide reliable estimates of the appropriate diffusion coefficient. (Author Modified Abstract)

THE BACTERIOLOGICAL AND CHEMICAL BEHAVIOR OF SILVER IN LOW CONCENTRATIONS.
Technical rept.,
Cecil W. Chambers, and Charles M. Proctor. 1960, 21p SEC-TR-A60-4

Descriptors: (*Disinfectants, *Silver inorganic compounds), (*Water treatment, *Disinfection), Bactericides, Bacteria.

Much consideration has been devoted to whether silver, when added to water by mechanisms such as filter beds, electrolytic devices, or as colloidal suspensions, has greater germicidal efficiency than the same amount of silver added as AgNO3. In the present investigation, improved bacteriological and chemical methods, including radioisotope Ag110m, have been used to study the factors affecting the practical application of silver germicides in water treatment. Concentrations of silver are expressed either in terms of dissolved or suspended agent determined by analysis at the time of the test or in terms of silver quantitatively added. (Author Modified Abstract)

METHODOLOGY FOR EVALUATING THE AIR POLLUTION PROBLEMS OF A STATE,
Donald M. Keagy, Paul A. Kenline, E. R. Hendrickson, and Roy O. McCaldin. 1957, 19p
Presented at the Air Pollution Session of the Annual Meeting of the American Industrial Hygiene Association, St. Louis, Mo. 25 April, 1957.

Descriptors: (*Air pollution, Data acquisition), State government, Questionnaires.

Realizing that pollution of the atmosphere by domestic, industrial and agricultural activities is becoming an ever-increasing environmental problem, some states have recognized the need to assess their current and potential air pollution problems in order to inaugurate prevention and control activities without delay. The methods described here were developed and used in three state-wide air pollution appraisals in Connecticut, Washington, and Tennessee respectively during the past 12 months and will shortly be put to use in a fourth such study in Texas.

KETCHIKAN, ALASKA BACTERIOLOGICAL SURVEY. TECHNICAL ASSISTANCE AND INVESTIGATIONS.

Aug 69, 26p

Descriptors: (*Tongass Narrows, *Water pollution), (*Alaska, Water pollution), Sewage.
Identifiers: *Sewage treatment effluents, *Ketchikan (Alaska), *Water quality data.

The sewage disposal system at Ketchikan, Alaska discharges raw sewage directly into the adjacent marine waters of Tongass Narrows. The purpose of the study was to document the bacteriological water quality of Tongass Narrows with respect to the effects of raw sewage outfalls from the city of Ketchikan, Alaska. The study was limited geographically to the section of Tongass Narrows between Ward Cove and the Ketchikan U. S. Coast Guard Station. The study was conducted May 7 through May 12, 1969. This time period was selected to avoid possible influence from fish processing wastes discharged to the area later in the season. (Author Modified Abstract)

TO DEMONSTRATE THE EFFECTIVENESS OF IODINE FOR THE DISINFECTION OF PUBLIC WATER SUPPLIES AND TO DETERMINE THE PHYSIOLOGICAL EFFECTS ON A HUMAN POPULATION.
Progress rept. no. 5, 1 Jul 66-28 Feb 67.

10 Mar 67, 59p
Grant WPD-19-04-66

Descriptors: (*Water treatment, *Iodination), (*Public health, Water treatment), Florida.
Identifiers: *Gainsville (Florida).

The water supply of the three institutions has been continuously disinfected with iodine since October, 1963. The general health and thyroid function of the 29 remaining inmates of the original test group were re-evaluated in December, 1966. All continue to be in good health and have no evidence of impaired thyroid function. Thus, there is no evidence in these subjects that long-term use of an iodinated water supply has been deleterious to health. Additional inmates are being examined and added to the test group. Iodine was added to the water supply of the City of Gainesville, Florida, for a twelve-hour period on February 23, 1967. A dosage of 1 ppm was added to the water which contained about 2 ppm of combined chlorine. Iodine residuals were maintained to the ends of the system by reoxidation of the iodide ion. The year's research concerned with the above is discussed.

DIFFUSION OF PARTICLES BY TURBULENCE: EFFECT OF PARTICLE SIZE.
Final rept.,
Hirebdra Majumder, and M. R. Carstens. Dec 67, 112p WRC-0967
Grant FWPCA-WP-00912-02

Descriptors: (*Diffusion, Particles), (*Turbulent flow, Particles), (*Liquid flow, *Particles), Mathematical models, Particle size.

Particle diffusion of six sizes of nylon particles was observed, recorded, and analyzed. The experimental apparatus was designed and the particles were selected to achieve the following: (a) restriction of the particle motion to a horizontal plane thereby eliminating the effect of gravity; (b) elimination of particle-to-particle collisions by observing the motion of widely separated individual particles; (c) elimination of the effect of particle density by using nearly neutrally buoyant particles; and (d) a homogeneous and isotropic field of fluid motion in which particle diffusion occurs without mean motion. The motion of individual particles was recorded on motion-picture film, which was subsequently projected for displacement measurements. (Author Modified Abstract)

EMISSION OF HYDROCARBONS TO THE ATMOSPHERE FROM COOLING TOWERS,
Frank Bonamassa, and Yee Sing Yee. Aug 57, 18p
4

Descriptors: (*Refineries, Air pollution), (*Petroleum refining, Air pollution), (*Air pollution, *Hydrocarbons), (*California, Air pollution), (*Cooling towers, Air pollution), Leakage.
Identifiers: *Los Angeles County (California).

Cooling towers in petroleum refineries are a source of hydrocarbon emissions to the atmosphere when the cooling water acquires hydrocarbons in leaking heat exchangers and releases them when passing through the tower. A sampling procedure and an analytical method were developed to measure the hydrocarbon concentration of the water before and after its pass through the cooling tower. Tests revealed that of the 93 cooling towers operating in Los Angeles County, 17 showed detectable emissions totaling about three tons of hydrocarbons per day.

KEYS TO WATER QUALITY INDICATIVE ORGANISMS. (SOUTHEASTERN UNITED STATES),
Fred K. Parrish. Nov 68, 206p
Errata sheet inserted.

Descriptors: (*Water analysis, *Biological surveys), (*Fresh water biology, Biological surveys), (*Water pollution, Biological surveys), Fungi, Algae, Mollusca, Oligochaeta, Crustacea.
Identifiers: Ephemoroptera, Plecoptera, Trichoptera, Chironomidae.

The manual was written to be used as a reference for Southeastern biologists involved in water quality studies. The keys are designed to supply useable, accurate aids for the identification of organisms usually encountered in water quality surveys. In all except three sections, a sketch is included to illustrate nearly all couplets. The emphasis is directed toward an introduction to the fungi, their occurrence in nature, and a guide to the literature. Accurate, up-to-date, illustrated keys are readily available for the algae and fish. (Author Modified Abstract)

PROCEEDINGS: CONFERENCE IN THE MATTER OF POLLUTION OF THE INTERSTATE WATERS OF LAKE TAHOE AND ITS TRIBUTARIES, HELD AT STATELINE, NEVADA ON JULY 18-20, 1966. VOLUME 1.

1966, 323p

Descriptors: (*Lake Tahoe, *Water pollution), (*California, Water pollution), (*Nevada, Water pollution).

The purpose of the conference was to bring together the State water pollution control agencies, representatives of the Federal Water Pollution Control Administration and other interested parties to review the existing pollution situation, to appraise what has been done, to correct the situation so far, to lay a basis for future action, and give the states and localities an opportunity to take whatever remedial action is possible and practicable under state and local law. SURVEY OF COMPOUNDS WHICH HAVE BEEN TESTED FOR CARCINOGENIC ACTIVITY. SECOND EDITION,
Jonathan L. Hartwell. 1951, 585p PHS-Pub-149
Revision of report dated 1939.

Descriptors: (*Carcinogens, Tables (Data)), Chemical compounds, Inorganic compounds, Organic compounds, Malignant neoplasms, Mutagens, Neoplasms, Surveys.

The book lists 1329 compounds of which 322 were reported to cause malignant tumors in animals and 35 others to induce only benign ones. The work lists only single compounds. Such complex mixtures as tars, irradiated sterols and articles of diet are not included. Mixtures of two or more compounds given simultaneously are generally excluded. Since the mass of short term pharmacological observations in the literature are not informative as regards tumor-producing potency, only compounds on which observations have been made for at least one month after the first administration have been included. The applications of chemical compounds to all vertebrates excepting fish have been considered. The action of carcinogens on fish, flowering plants, yeasts, bacteria, tissue cultures, isolated tissues, and the like has not been covered. Names have been altered to conform to the Chemical Abstracts system. In addition, trade names and alternate chemical names have been placed in the index of compounds to help in locating certain compounds.

WATER QUALITY CONSERVATION, ARKANSAS-RED RIVER BASINS. APPENDIX. VOLUME II. WATER QUALITY DATA. PART 3 STREAM UNIFORMITY STUDY DATA AND BASIS FOR CORRELATION OF SPECIFIC CONDUCTANCE AND CHEMICAL ANALYSES, ARKANSAS RIVER BASIN.
Rept. for Jul 60-Sep 62.
Mar 64, 405p

Descriptors: (*Arkansas River Basin, *Water pollution), (*New Mexico, Water pollution), (*Texas, Water pollution), (*Oklahoma, Water pollution), (*Kansas, Water pollution), (*Arkansas, Water pollution), Colorado, Louisiana.
Identifiers: *Water quality data.

The compilation of water quality data collected during the 27-month period of intensive study (July 1960 through September 1962) of the Arkansas-Red River Basins Water Quality Conservation Project is presented in five parts. These data were gathered to provide a basis for (1) location and definition of the significant natural and manmade sources of salt (mineral) pollution, and (2) determination of the effects of these sources on the quality of water in the receiving streams. The intensive investigation of water quality and natural sources of mineral pollution was limited to the central portions of both basins, the area in which major salt sources exist, and mineral pollution is most severe. This report, Part 3, discusses stream uniformity and basis for correlation of specific conductance and chemical analyses in the Arkansas River Basin. (Author Modified Abstract)

NATURAL SOURCES OF GASEOUS POLLUTANTS IN THE ATMOSPHERE,
Aubrey P. Altshuller. 1957, 33p

Descriptors: (*Air pollution, Sources), (*Atmospheric composition, Sources), Abundance, Ozone, Ethylene, Formaldehyde, Methane, Hydrogen, Photochemical reactions, Nitrogen oxides.
Identifiers: *Natural abundance, Biosphere.

The concentration of pollutants within a given political or geographical urban area can arise (1) from combustion or industrial process sources within a given area, (2) from similar sources outside the boundaries of that area or, (3) from natural processes taking place over large areas of the earth's surface or upper atmosphere. The pollution arising from man-made sources outside a given area may come from nearby cities or industrial areas. But the pollutants may also come from distant sites not at all obvious, and perhaps only occasionally offenders, under special meteorological conditions. In the report the methods of production, destruction, and the concentrations of various individual trace gases will be discussed. This can occur as natural releases from the earth's surface, microbiological reactions, and upper atmospheric reactions.

COLORIMETRIC DETERMINATION OF ALKYL NITRITES.

Sep 57, 5p
Presented at Air Pollution Symposium of Div. of Industrial and Engineering Chemistry Meeting (132nd), American Chemical Society, New York City, Sep 57.

Descriptors: (*Nitrites, *Gas analysis), (*Nitrogen dioxide, Gas analysis), Errors, Mixtures.
Identifiers: *Saltzman analysis, *Air pollution detection.

The Griess method (Saltzman procedure) has been used in air pollution work to determine NO2 in laboratory and field operations and it has been adapted for use in automatic instrumentation. In this latter investigation it was shown that alkyl nitrites also react with the reagent in the automatic nitrogen dioxide analyzer used. It appeared of interest to determine the reactivity of the alkyl nitrites directly without also having to consider absorption efficiencies. The amount of reaction on a micromole basis of n-butyl nitrite, t-butyl nitrite, n-amyl nitrite, and i-amyl nitrite was determined for comparison with the reactivity of sodium nitrite and nitrogen dioxide.

RELATIONSHIPS OF AN AIR QUALITY MEASUREMENT TO METEOROLOGICAL PARAMETERS,
E. H. Markee, Jr. Apr 58, 25p
Presented at the Industrial Health Conference, American Industrial Hygiene Association, Atlantic City, N. J. 24 Apr 58.

Descriptors: (*Air pollution, *Atmospheric motion), Wind (Meteorology).
Identifiers: Soiling index.

A two-year joint federal, state, and city-county air quality study was recently completed in the city of Louisville and Jefferson County, Kentucky. An extensive air sampling and meteorological network had been set up for this study. A small sample of the data collected during the course of the study was analyzed to show the relationships of an air quality measurement to meteorological parameters using graphical multiple curvilinear regressions and correlation indices. The air quality measurement selected for use in this analysis was optical density (soiling index) which is an index of smoke concentrations. (Author Modified Abstract)

CARCINOGENIC BIOASSAYS ON AIR POLLUTANTS,
W. C. Hueper, P. Kotin, E. C. Tabor, Wm. W. Payne, and H. Falk. 1960, 63p
Presented at the Annual Meeting of the Air Pollution Control Association (53rd), 25 May 60, Cincinnati, Ohio.

Descriptors: (*Carcinogrens, *Air pollution), Bioassays, Malignant neoplasms, Lung, Contaminants, Laboratory animals, Neoplasms, Etiology, Public health, United States.

Biossays performed on mice with four subcutaneously injected solvent fractions of the particulate phase of air pollutants of eight cities containing aromatic as well as aliphatic hydrocarbons, yielded cancerous reactions with all four fractions. The cancer yield obtained by the various fractions differed with the fraction as well as with the city from which the air-pollutants were collected. With the exception of air pollutants of Birmingham, which showed the highest total cancer yield and which had also the highest amount of 3.4-benzpyrene, there was no consistent correlation between the degree of carcionogenic potency of the solvent fractions bioassayed, the amount of 3.4-benzpyrene, and the reported lung cancer mortality rate in the eight cities studied. Every community has an atmospheric carcinogenic spectrum which depends upon industrial activities, traffic conditions, climate, solarization, and geologic conditions. An exploration of the relative role and importance of these factors for the lung cancer panorama of individual cities should include an investigation not only of the aromatic and aliphatic hydrocarbons present in the particulate phase of air pollutants but also of metallic, mineralic and radio-active constituents as well as the relative chemical stability and the physical status of some of these elements in the atmosphere.

ILLUSTRATED FLOW CHART TO CERTAIN GROUPS OF CHIRONOMID LARVAE,
George H. Paine, Jr. 1965, 12p

Descriptors: (*Diptera, *Larvae), (*Water pollution, *Indicator species), Taxonomy, Identifying, Physiology, Morphology.
Identifiers: *Chironomidae, Midges.

Presented is an illustrated flow chart intended to facilitate identification of some common genera and species of Chironomid larvae of North America. Some brief remarks on the morphology and physiology of the family are given. Some of these species are actively favored by pollution and their presence, especially in the absence of intolerant forms may be taken as a strong indication of the presence of organic pollution. Other Chironomids conversely are highly intolerant of pollution, and a diagnosis of 'pollution' based solely on their presence as 'Chironomid larvae', would be a gross error. The importance of generic species identification in interpreting the pollutional significance of this group is thus self-evident.

CHEMICAL AND HYDRAULIC CHARACTERISTICS OF THE ANAEROBIC CONTACT PROCESS FOR SEWAGE TREATMENT,
M. B. Ettinger, J. L. Witherow, and J. B. Coulter.
Apr 57, 21p
Presented at Manhattan Waste Treatment Conference (2nd), Apr 57.

Descriptors: (*Sewage treatment, *Anaerobic processes), Design criteria.

Performance characteristics required in a plant to treat sewage from a few houses so that it will be suitable for discharge to open storm sewers have been discussed. The possibility of using anaerobic treatment in simple units is being explored. Some of the hydraulic problems of design, and chemical problems relating to observation of system performance have been presented. The up-flow sludge contact system described shows promise of becoming a useful addition to sewage disposal procedures, particularly for the very small installation.

ESTIMATES OF FUTURE POPULATION - DALLAS, INDEPENDENCE AND MONMOUTH (POLK COUNTY).
Nov 61, 8p Working Paper-7
Report on Columbia River Basin Project for Water Supply and Water Quality Management.

Descriptors: (*Oregon, Economic development), (*Willamette River Basin, *Economic development), River basin development.
Identifiers: *Polk County (Oregon), Dallas (Oregon), Independence (Oregon), Monmouth (Oregon).

Estimates of future population of cities are subject to a wider margin of error than those for areas such as counties or river basins because of the additional variable of possible annexations to the cities. In the case of Dallas, Independence, and Monmouth discussed in this report, no attempt has been made to separate the portion of their past growth due to annexations from the portion due to development within previous boundaries. It is assumed, in the following projections, that future growth will represent about the same mixture as it has in the past of (1) annexation and (2) more intensive development of the older area.

WATER RESOURCES STUDY - MARMATON RIVER BASIN, KANSAS AND MISSOURI. STUDY OF POTENTIAL NEEDS AND VALUE OF WATER STORAGE FOR MUNICIPAL, INDUSTRIAL, AND QUALITY CONTROL PURPOSES.
Mar 64, 45p

Descriptors: (*Marmaton River Basin, *Reservoirs), (*Kansas, *Water resources), (*Missouri, *Water resources), Forecasting.

The Kansas City District of the Corps of Engineers requested the Public Health Service to make an investigation of the present and prospective needs for municipal and industrial water supply and for the regulation of streamflow for water quality control in the Marmaton River Basin. The purpose of this study is to determine the need for and value of storage for municipal and industrial water supply and streamflow regulation for quality control in the Marmaton River, a tributary of the Osage River. The study area is the Marmaton River Watershed. The study covers the period of 1960 to 2060. (Author Modified Abstract)

POLLUTION EFFECTS OF PULP AND PAPER MILL WASTES IN PUGET SOUND. A REPORT ON STUDIES CONDUCTED BY THE WASHINGTON STATE ENFORCEMENT PROJECT.
Mar 67, 486p

Descriptors: (*Puget Sound, *Water pollution), (*Washington (State), Water pollution), (*Paper industry, Water pollution), Toxicity.
Identifiers: *Water pollution effects (Plants), *Water pollution effects (Animals), *Water quality data.

The seven pulp and paper mills considered in the report discharge large quantities of process wastes into estuarine waters in four areas of Puget Sound. Greatest concern is the toxic effects of pulping wastes on marine life. Sludge deposits formed by settled waste solids are commonly found in the vicinity of waste discharge. These are usually anaerobic and produce toxic and odorous gases. There is the problem of aesthetic impairment of water quality by colored, odorous, and turbid mill wastes. The document studies in detail the following areas: Everett Harbor and Port Gardner; Guemes Channel, Padilla Bay in the vicinity of Anacortes; Whatcom Waterway at Bellingham; Port Angeles area.

USE OF CHEMICAL ADDITIVES TO IMPROVE AERATION RATES. STUDY OF THE BEHAVIOR OF SINGLE BUBBLES,
Progress rept. no. 2a,
Stefan A. Zieminski, and Delmar R. Raymond.
1966, 31p R-848-2a
Grant PHS-WP-00562
See also PB-216 548.

Descriptors: (*Aerators, *Mass transfer), (*Dissolution, *Aeration), Bubbles.

The report deals with construction and testing of equipment for the study of the behavior of a single bubble in the presence of minute quantities of organic substances. The variables proposed for investigation are the velocity of rise, instantaneous dissolution rate, shape, oscillation and effects of age of the bubble on the mass transfer. One of the main objectives of the design of the equipment was to obtain a continuous record of the behavior of the bubble from the moment of its formation to the end of its journey at the top of the column. USE OF CHEMICAL ADDITIVES TO IMPROVE AERATION RATES. PRELIMINARY STUDY OF MODELS.
Progress rept. no. 2b,
Stefan A. Zieminski, and Martin E. Ray. 1966, 35p R-848-2b
Grant PHS-WP-00562
See also PB-216 547.

Descriptors: (*Aerators, *Mass transfer), (*Dissolution, *Aeration).

Previous investigations conducted with porous plates have shown that some organic substances present, in minute quantities, in an aerated mixture increase the interfacial surface area (A) to such an extent that despite the reduced mass transfer coefficient (K sub L) the total rate of oxygen transfer (K sub L) can be considerably increased. The report deals with a preliminary investigation of three different models of aerators in which the organic agent was introduced at different rates of flow and concentrations. The objective of the tests was to obtain some information about the effects of these variables on quantities such as the bubble diameter, the interfacial area, the mass transfer coefficient, and the total rate of oxygen transfer. REMOVAL OF SUB-MICRON PARTICLES IN ACTIVATED CARBON FILTER BEDS,
John Thomas Cookson, Jr. Dec 68, 92p
Grant FWPCA-WP-981

Descriptors: (*Activated carbon treatment, *Bacteria), (*Colloids, Activated carbon treatment), (*Water treatment, Activated carbon treatment), Absorption, Filtration, Transport properties.

The study was undertaken to provide a better understanding of colloid removal in filter beds. The influence of chemical and physical parameters are evaluated and a model presented to correlate physical filtration parameters to removal efficiency. The removal of the virus Escherichia coli bacteriophage T4 is studied in beds of activated carbon. The report has been divided into three major parts: Studies on the chemical nature and behavior of activated carbon in water; The mechanism of virus absorption on activated carbon; and The physical aspects of filtration. A transport model, based on diffusional transfer in a flowing fluid, is correlated to experimental data.

SURPLUS PHOSPHORUS UPTAKE BY MICROORGANISMS. BATCH TESTS WITH DILUTE ACTIVATED SLUDGE CULTURES.
Technical rept. no. 2,
Harry G. Moore, Jr., Robert B. Higgins, and E. Gus Fruh. Feb 69, 53p EHE-69-08, CRWR-41
Grant FWPCA-WP-01449-01

Descriptors: (*Sewage treatment, Phosphorus), (*Bioassay, Activated sludge process), Enzymes, Phosphatases, Microorganism control (Sewage).

An alkaline phosphatase assay based on the use of a p-nitrophenyl phosphate substrate was studied for its applicability to indicate surplus phosphorus uptake by a dilute heterogeneous bacterial culture obtained from an activated sludge process. This investigation demonstrated the validity of the enzymatic bioassay using viable bacterial cells and determined conditions under which the bioassay should be conducted as a standard procedure. Alkaline phosphatase activity was found to be repressed by both orthophosphate external to the cells and by stored phosphorus within the bacterial cells. Based on these studies, the assay appears useful to help elucidate the mechanism responsible for the abnormally high phosphorus removal being attained by various activated sludge plants in the United States. The research also indicates the possible significance of the surplus phosphorus uptake phenomenon in waste treatment processes. (Author)

WATER RESOURCES STUDY, MILFORD RESERVOIR PROJECT, KANSAS RIVER BASIN, KANSAS. STUDY OF POTENTIAL NEEDS AND VALUE OF WATER STORAGE FOR MUNICIPAL, INDUSTRIAL AND QUALITY CONTROL PURPOSES.
Mar 64, 90p

Descriptors: (*Milford Reservoir, Assessment), (*Kansas River basin, *Reservoirs), (*Kansas, *Water resources).

Milford Reservoir is being built on the lower Republican River in the State of Kansas for flood control and other purposes. The study determines the quantities of water that will be needed for municipal and industrial water supply and for water quality control, sets forth the locations at which flow regulation will be needed, identifies the beneficiaries, and estimates the benefits attributable to inclusion of storage in Milford Reservoir to meet these needs. The primary area of influence of Milford Dam is the main stem of the Kansas River, but water draining from the entire basin affects the quality of water in the Kansas River and consequent flow regulation needs. Water supply and quality control needs for the next 100 years have been estimated.

CONTROLLING FACTORS IN METHANE FERMENTATION.
Summary of research progress rept. 1 Sep 62 - 1 Sep 64,
R. E. Speece, and R. S. Engelbrecht. 1964, 46p
Grant FWPCA-WP-00394

Descriptors: (*Anaerobic processes, Process variables), (*Sewage treatment, Anaerobic processes), (*Fermentation, *Metabolism), Nutrients, Digestion (Decomposition).
Identifiers: *Methane bacteria.

A number of approaches have been taken in attempting to evaluate the important factors which control the rate of methane fermentation in anaerobic digestion. The ultimate goal of the research has been to determine the chemical, physical, and biochemical requirements which will enable the methane fermentation to proceed at rates on the order of one magnitude greater that commonly observed in conventional anaerobic digestion. A considerably detailed study was conducted to assay the methane fermentation stimulation potential of six compounds which had shown promise in a previous study conducted by the principal investigator. Next, a series of studies was designed to evaluate the influence of many physical and chemical factors involved in digestion. Following this, the methane fermentation requirements for trace organics, such as vitamins and amino acids was studied. Combinations of individual amino acids and vitamins as well as mixtures, e.g. case in hydrolyzate (enzymatic), yeast extract, and fortified vitamin B complex, were assayed for their stimulation potential. The surface charge on the microorganisms was altered by inorganic and organic coagulating agents while observing the acetate utilization rate.

WATER RESOURCES STUDY, GRAND RIVER BASIN, IOWA AND MISSOURI. STUDY OF POTENTIAL NEEDS AND VALUE OF WATER STORAGE FOR MUNICIPAL, INDUSTRIAL, AND QUALITY CONTROL PURPOSES.

Nov 63, 47p

Descriptors: (*Grand River Basin, *Reservoirs), (*Iowa, *Water resources), (*Missouri, *Water resources).

Seven multipurpose reservoirs are proposed for the Grand River Basin. The reservoirs are planned for flood control, municipal water supply, pollution abatement, recreation, and fish and wildlife. Economic projections were made for all or parts of the following counties: Iowa - Ringgold, Decatur, Union, and Adair; Missouri - Worth, Harrison, Mercer, Gentry, Grundy, Sullivan, DeKalb, Daviess, Livingston, Linn, Caldwell, Clinton, and Chariton. The areas studied are within the Grand River drainage basin. The study was made to determine the need for and value of storage for municipal and industrial water supply and streamflow regulation for quality control. The report contains estimates of water requirements for the present and for the years 2010 and 2060.

MAXIMUM PERMISSIBLE CONCENTRATION OF RADIOISOTOPES IN AIR AND WATER FOR SHORT PERIOD EXPOSURE,
Karl Z. Morgan, Walter S. Snyder, and Mary R. Ford. 1973, 44p

Descriptors: (*Radioactive isotopes, Radiation dosage), (*Radiobiology, *Radiation dosage), Exposure.
Identifiers: *Permissible dosage.

The purpose of this report is to extend the method of calculation used in the International Commission on Radiation Protection Handbook to estimate the Maximum Permissible Concentrations values or the maximum permissible intake (MPI) of these same radioactive materials for a single exposure. Since the concentration of material in the GI tract reaches equilibrium with that in air and water in a few days, one might suspect that the GI tract frequently would become the critical body organ for short periods of exposure. Another body organ likely to receive a high exposure and as a consequence become the critical body organ for single exposure is the lung. (Author Modified Abstract)

WATER SUPPLY AND POLLUTION CONTROL RESEARCH INVENTORY ACTIVE PROJECTS, 1958,
Frank A. Butrico, Harry A. Faber, and Keene Taylor. 1960, 72p PHS-Pub-768

Descriptors: (*Water pollution, *Research).

The report summarizes data on 280 water supply and pollution control research projects active in the United States during 1958. The information presented was compiled from questionnaires distributed to investigators and administrators known to be conducting or directing research in water, sewage, and industrial wastes. The Inventory is designed to provide a useful record of research underway, and also to facilitate communication between investigators. It includes a brief report of basic data concerning each research project, a comprehensive index of subjects being studied, and an address list for use in the exchange of information. (Author)

NEW ENGLAND DRAINAGE BASINS: A COOPERATIVE STATE-FEDERAL REPORT ON WATER POLLUTION.
Water pollution series summary rept.
1951, 167P PHS-Pub-88, PHS-WPS-7

Descriptors: (*United States, *Water resources), (*New England, *Water pollution), Connecticut, MAINE, Massachusetts, New Hampshire, New York, Rhode Island, Vermont.

The summary report presents information about the ways the water resources are used, the pollution going into the water resources and the resulting damages, the benefits which may result from pollution prevention and abatement, the pollution prevention measures now in effect, and those required. It is in two parts. Part one considers the water pollution problems of the basin as a whole. Part two presents briefly the data for each of the several sub-basins of the major basin, including a list of projects now known to be needed for water pollution control.

WATER CHLORINE (RESIDUAL) NUMBER 1,
R. J. Lishka, E. F. McFarren, and J. H. Parker.
1969, 137p PHS-Pub-1988, PHS-ARS-Study-35
Report of a Study Conducted by Analytical Reference Service.

Descriptors: (*Chlorine, *Water analysis), Standards, Accuracy.

The chlorination of water supplies accomplishes, in addition to the destruction of microorganisms, a number of other objectives. The reaction of chlorine with compounds such as phenol may result in the production of undesirable taste and odor compounds. If the chlorination is carefully controlled, however, even the latter can be improved. In any case, as a result of chlorination, one of the most commonly performed chemical determinations is the measurement of free available or combined available chlorine in water. At present, there are nine methods for the determination of free and combined chlorine. Unfortunately, none of these have been studied collaboratively. This study was undertaken in an effort to evaluate and prehaps eliminate some of them.

PURE AIR FOR PENNSYLVANIA - A JOINT STUDY OF THE EXTENT AND NATURE OF AIR POLLUTION IN PENNSYLVANIA,
David M. Anderson, Jan Lieben, and Victor H. Sussman. Nov 61, 138p SEC-TR-A61-57
Prepared in cooperation with Pennsylvania Department of Health.

Descriptors: (*Air pollution, *Pennsylvania).
Identifiers: *Air quality data.

Basically the study consisted of an analysis of all available air pollution data. The main sources of information concerning community problems were personal visits and interviews with local officials. More than 80 percent of the State's population was covered. The air pollution control officer or the health officer, if any, were the preferred officials for interviewing. All manufacturing industries and public utilities in Pennsylvania employing 100 or more persons were contacted by letter to ascertain industrial air pollution control activities in the State. All available air quality data were assembled and tabulated as concisely as possible. Data on local control activities received special emphasis. Certain technical methods were developed. Photographs were obtained to illustrate some of the more severe problems. (Author Modified Abstract)

SEWER CONSTRUCTION COST INDEX. CONSTRUCTION COST TRENDS. MUNICIPAL SEWERS.
1964, 32p PHS-Pub-1132

Descriptors: (*Sewers, *Construction costs), Indexes (Ratios).

The index, utilizing known quantities of labor and materials properly proportioned, has the advantage of being its own test for the base period. Because it has a fixed base, periodic surveys can be made to test whether or not the fixed base still reflects sewer construction practice. This method provides a yardstick to study the trends and magnitude of sewer project construction costs in constant dollar values. The two indexes--the Sewage Treatment Plant Construction Cost Index (PHS-STP) and the Sewer Construction Cost Index (PHS-S)-- when used in conjunction, provide the tools necessary to equate sewerage projects, one to another, in both time and place.

CONTROL OF RADON AND DAUGHTERS IN URANIUM MINES AND CALCULATIONS ON BIOLOGIC EFFECTS,
Duncan A. Holaday, David E. Rushing, Richard D. Coleman, Paul F. Woolrich, and Howard L. Kusnetz. 1950, 93p PHS-Pub-494

Descriptors: (*Industrial medicine, *Radon), (*Radioactive isotopes, Industrial medicine).
Identifiers: *Uranium mining, *Mine safety.

A steadily mounting rate of uranium production has focused increasing attention on the health hazards associated with the mining of this strategic metal. Predominant among these hazards is exposure to radon, a dense gas emanating from the ore, together with the products which result from the radioactive decay of radon. To date, neither records of human exposure to radon daughter products nor data from animal experimentation have been available in sufficient quantity to permit a determination of a maximum permissible concentration for these elements. It has therefore been necessary to establish a working level which appears to be safe, yet not unnecessarily restrictive to industrial operations. Such a level, it is believed, has been established and recommended in the report. (Author Modified Abstract)

Descriptors: (*Refineries, Air pollution), (*Petroleum refining, Air pollution), (*Air pollution, *Hydrocarbons), (*California, Air pollution), Industrial wastes, Pumps, Seals, Compressors.
Identifiers: *Los Angeles County (California).

One phase of the Joint District, Federal and State Project for the Evaluation of Refinery Emissions was the study of hydrocarbon leakage from seals on pumps and compressors. The report details the techniques and conclusions of the study. Using the census data, pumps were classified into 27 unique combinations of pump type, seal type, product and pump operation. Approximately 15 per cent of the seals in each group were checked. A total of 473 pump seals were inspected and these had an average loss of 4.2 pounds of hydrocarbons per day. This average loss is based on emissions from 75 measured leaks and loss estimates for 95 small leaks. All compressor seals were tested. These lost an average of 8.5 pounds per day per seal. The hydrocarbon leakage from pump seals is given. (Author Modified Abstract)

ANALYSIS OF SOLID WASTE COMPOSITION. STATISTICAL TECHNIQUE TO DETERMINE SAMPLE SIZE,
Dennis E. Carruth, and Albert J. Klee. 1969, 28p BSWM-SW-19ts

Descriptors: (*Waste disposal, *Samples), Sampling, Statistical analysis.
Identifiers: *Solid waste disposal.

The work analyzes data obtained after separating and weighing solid waste and presents a statistical technique to determine the minimum weight and number of samples needed to realistically and reliably estimate the characteristics of a given quantity of solid waste. Samples of solid waste of varying weights were taken and separated into nine components; each component was weighed, and the data were then statistically evaluated. It was determined that there is no significant variance among sample weight groups. The study recommends that 12, relatively small (200-lb) samples will validly reflect the composition of a given supply of solid waste. (Author)

A REPORT ON THE DEKALB COUNTY INCINERATOR STUDY,
Leland E. Daniels. 1970, 74p BSWM-SW-31ts

Descriptors: (*Waste disposal, *Incinerators), (*Georgia, Waste disposal), Air pollution, Performance evaluation.
Identifiers: *Solid waste disposal, *DeKalb County (Georgia).

On October 28, 1968, the DeKalb County, Georgia, Department of Public Health, requested assistance from the Bureau of Solid Waste Management in solving the problem of excess particulate emissions from the DeKalb County incinerator. A field study of the incinerator was conducted from December 11 to 13, 1968, to determine the potential level of pollution resulting from the solid, liquid, and gaseous effluents from the incinerator. The results of this study are presented.

SOLID WASTE MANAGEMENT PRACTICES IN A PLASTICS PRODUCTION PLANT,
William T. Dehn, and Dennis E. Carruth. 1970, 39p BSWM-Open File Rept-TO-5.0/0

Descriptors: (*Waste disposal, *Plastic industry).
Identifiers: *Solid waste disposal.

A study of solid waste generation, storage, collection, and disposal was conducted at a plastics production plant during the fall of 1968. A study team observed the normal solid waste management practices within the plant during one week. Additional data and information, unavailable during the field study, were obtained through written request to the company. The solid wastes were categorized as either process waste or nonprocess waste. (Author)

REPORT ON A STUDY OF THE ALEXANDRIA, VIRGINIA INCINERATOR,
Tobias A. Hegdahl. 1970, 53p BSWM-SW-12ts

Descriptors: (*Waste disposal, *Incinerators), (*Virginia, Waste disposal), Performance evaluation.
Identifiers: *Solid waste disposal, *Alexandria (Virginia).

In October 1967, the Solid Waste Management Representative, Bureau of Solid Waste Management was contacted by the City of Alexandria, Virginia, regarding the possibility of having their incinerator tested. The city was interested in finding out if recently made changes in furnace operation had affected particulate emissions. Since the stack-emission tests had been conducted in April 1967, before the changes in operation were made, a direct comparison would be possible. A study was conducted from May 18 to 25, 1968.

FISH POISONING: A PROBLEM IN FOOD TOXICATION,
Alfred F. Bartsch, and Earl F. McFarren. 1960, 34p
Presented at the Milk and Food Sanitation Session of the Laboratory Section held in Cincinnati, Ohio, on 2 Nov 60.

Descriptors: (*Fishes, *Toxicity), (*Food poisoning, Fishes), (*Seafood, Food poisoning), Public health, Poisons, Distribution (Property), Identifying, Shellfish.
Identifiers: *Poisonous fishes.

Some marine organisms are dangerous because of their venomous stings or bites, while others are poisonous to eat. Among the latter are shellfish of several kinds, including mussels, clams, and oysters. Some fin fishes also are poisonous to eat. They are intrinsically poisonous and, like the toxic shellfish, do not produce their undesirable effects through bacterial spoilage. Such fishes are the subject of this paper.

THE JOINT CITY, COUNTY, STATE, AND FEDERAL STUDY AIR POLLUTION IN LOUISVILLE, KENTUCKY,
August T. Rossano, Jr. 1956, 10p
Presented at the Annual Meeting of the Air Pollution Control Association (49th), held at Buffalo, N. Y., on 21 May 56.

Descriptors: (*Kentucky, *Air pollution).
Identifiers: *Louisville (Kentucky).

The paper describes the planning and development of a cooperative study of air pollution in Louisville, Kentucky. The study, initiated January, 1956, is sponsored by the Jefferson County Air Pollution Control District under the technical

direction of the Public Health Service in cooperation with the City-County Board of Health, the State Department of Health, the U.S. Bureau of Mines, and the U.S. Weather Bureau, and the National Bureau of Standards and with financial support from the industries of Louisville. Outlined in this paper is the plan of study which includes an inventory of air pollution sources, an odor survey, continuous air sampling, meteorological coverage, and other related activities. A CONTINUOUS AUTOMATIC AIR SAMPLER FOR THE DETERMINATION OF RADON AND THORON,
G. I. Coates. 1960, 14p
Presented at the Health Physics Society Meeting held in Boston, Mass., on 29 Jun-1 Jul 60.

Descriptors: (*Radiation measuring instruments, *Gas sampling), (*Air pollution, Radioactive contaminants), Design, Radon, Thoron.
Identifiers: *Air pollution detection.

An instrument is required to measure continuously environmental levels of airborne radon and thoron as well as beta activity and long-lived alpha emitters. The report describes an instrument which achieves these requirements by filtering air through a membrane filter in a step wise manner continuously observing the deposited alpha activity of the radon and thoron daughter products. This observed activity is theoretically related to the airborne gaseous radon and thoron. (Author Modified Abstract)

SYNOPTIC CLIMATOLOGY OF STAGNATING ANTICYCLONES EAST OF THE ROCKY MOUNTAINS IN THE UNITED STATES FOR THE PERIOD 1936-1956.
Technical rept.,
Julius Korshover. 1960, 17p SEC-TR-A60-7
Prepared in cooperation with the Weather Bureau, Washington, D.C. Office of Meteorological Research. Revision of report dated Nov 59.

Descriptors: (*Climatology, *Anticyclones), (*Synoptic meteorology, Anticyclones).

The purpose of the study is to define the synoptic climatology of stagnating high pressure systems in the eastern part of the United States. As a first step, it is necessary to make a survey of the location and frequency of occurrence of stagnating anticyclones in the area. In recent years, due to an increase in urban living, the air pollution problem has become more and more aggravating and has attracted considerable attention. Our gradually increasing population and the concentration of heavy industries in relatively congested areas of population indicate the need for an investigation of the synoptic climatology of this phenomenon with a view to preventing its harmful effects upon human life in the future. ATMOSPHERIC EMISSIONS FROM CATALYTIC CRACKING UNIT REGENERATOR STACKS,
Victor H. Sussman. Jun 57, 60p 4

Descriptors: (*Refineries, Air pollution), (*Petroleum refining, Air pollution), (*Catalytic cracking, Air pollution), (*Air pollution, *Industrial wastes), (*California, Air pollution), Atmospheric composition, Gas sampling.
Identifiers: *Los Angeles County (California).

The refineries in Los Angeles County operate six Fluid Catalytic Cracking Units, nine Thermofor Catalytic Cracking Units, and one Thermofor Catalytic Reforming Unit. These units process approximately 241,000 BPD of petroleum distillate. The atmospheric effluents from the regenerator stacks of these units were tested. Individual and total emission rates from these stacks are presented along with details of the sampling techniques and analytical methods used to obtain these data. The total emission rates from the regenerator stacks of the Thermofor and Fluid Catalytic Cracking Units (excluding the TCR Unit) were found.

PRELIMINARY REPORTS OF PROGRESS - EXPERIMENTAL WATER TREATMENT PLANT II. OPERATING RESULTS, 18-28 JULY 1949,
Conrad P. Straub, Thomas R. Ostrom, and K. Stanley Lyle. 16 Aug 49, 9p

Descriptors: (*Water treatment, Performance evaluation).

Before studies on the removal of radioactive materials by the experimental water treatment plant were initiated, it was felt desirable to obtain information relative to the efficiency of the plant in treating raw waters. To obtain these data, a treatment plant was in continuous operation for the period July 18-20 and July 25-28, 1949. During these intervals, turbid waters were treated with alum and alkali, passed through the coagulation and sedimentation chambers, and filtered. Hourly samples were collected of the raw, mixed, settled, and filtered waters, and the pH, turbidity, and alkalinity were determined.

SOLID WASTE PROCESSING. A STATE-OF-THE-ART REPORT ON UNIT OPERATIONS AND PROCESSES,
Richard B. Engdahl. 1969, 77p BSWM-SW-4c, PHS-Pub-1856
Contract PH-86-66-160
Library of Congress card no. 70-602720.
Paper copy available from GPO $0.75, as stock no. HE20.1102:304.

Descriptors: (*Waste disposal, *Bibliographies), Separation, Earth fills, Incinerators, Waste treatment, Utilization, Materials recovery.
Identifiers: *Solid waste disposal, Waste recycling.

The importance and intricacy of the solid wastes disposal problem and the need to deal with it effectively and economically led to the state-of-the-art survey covered by this report. The report is divided into two major parts: Unit Operations and Processes and Major Waste Categories. The first part of the report is divided into six sections: Densification and Size Reduction, Separation, Sanitary Landfill and Open Dumping, Incineration, Chemical Processing, and Recovery and Utilization. This first part of the report also includes various regulations concerning solid waste disposal, discussion being based on responses to the questionnaires sent to the State health departments. The second part of the report, arranged alphabetically, covers all the major waste categories considered. The report concludes with a bibliography.

POLICIES FOR SOLID WASTE MANAGEMENT.

1970, 79p BSWM-SW-11c, PHS-2018
Contract PH-86-67-240
Library of Congress Catalog Card no. 77-606275.
Paper copy available from GPO $0.50 as HE20.1402:P:75.

Descriptors: (*Waste disposal, Management planning).
Identifiers: *Solid waste disposal.

The report deals with the management of solid wastes. Solid wastes are significantly different from air and water pollutants and require unique environmental-control measures. In preparing the report, the Committee has attempted to evaluate the problems and place them in proper perspective. An attempt has been made to outline an action program based on problem definition, a study of need, a study of constraints, and an analysis of engineering requirements and alternatives. No attempt has been made to cover the entire spectrum of solid wastes; rather, attention is directed to the urban-generated portion and its resulting urban-centered problems, and to some effects of related agricultural, industrial, and commercial activity. TABLES OF THE PROBABILITY AND DENSITY FUNCTIONS FOR THE BIVARIATE EXTREMAL DISTRIBUTIONS,
E. J. Bumbel, C. K. Mustafi, and Orvel E. Smith.
1 Apr 68, 263p
Grant FWPCA-WP-00457, NSF-GK-695
Prepared in cooperation with National Aeronautics and Space Administration, Huntsville, Ala. Aero-Astrodynamics Lab.

Descriptors: (*Stream flow, Predictions), (*Bivariate analysis, Tables (Data)), Numerical analysis.

The floods of the Fox River were analyzed with the aid of probability density functions at two stations, namely, Berlin, Wisconsin (upstream) and Wrightstown, Wisconsin (downstream). From this data a distribution was found. Suppose we are interested to know how severe a flood has to be to cause a discharge of 20,000 c.f.s. (cubic feet per second) at Wrightstown and a discharge of 6,000 c.f.s. at Berlin. Denoting by X and Y the reduced values of the floods at upstream and downstream respectively, the authors can compute this. Most of the report is made of tables of probability and density functions for bivariate extremal distributions.

OIL AND HAZARDOUS MATERIALS. EMERGENCY PROCEDURES IN THE WATER ENVIRONMENT.
Oct 68, 140p CWR-10-1

Descriptors: (*Hazardous materials, Properties), (*Water pollution, Hazardous materials), Cargo transportation, Flammability, Explosions, Toxicology.
Identifiers: Contingency plans, *Hazardous materials transportation, Oil pollution.

Very large amounts of petroleum and chemical products are shipped in bulk via waterways and by rail, truck and pipeline. The number and quantity of these materials is steadily increasing as industrial needs expand and advances are made in transportation technology. Spills and other accidental discharges of such products can seriously impair water uses proximate or remote from the source of discharge. The purpose of this manual is to provide basic information on the characteristics and the effects of the pollutants and procedures to be followed in the event of a significant release of oil

or other hazardous materials to the water environment. This booklet initially covers about 50 petroleum products and chemicals shipped in bulk. (Author Modified Abstract)

MAIN STEM RESERVOIR EFFECTS ON WATER QUALITY IN THE CENTRAL MISSOURI RIVER 1952-1957,
Joe Kendall Neel, H. P. Nicholson, and Allan Hirsch. Mar 63, 157p

Descriptors: (*Missouri River, *Water pollution), (*Reservoirs, Missouri River), (*North Dakota, Water pollution), (*South Dakota, Water pollution), (*Nebraska, Water pollution), Garrison Reservoir, Oahe Reservoir, Fort Randall Reservoir, Gavins Point Reservoir.
Identifiers: *Water quality data.

The investigation from 1952 to 1957 disclosed water quality changes wrought by early impoundment in main stem reservoirs on the Central Missouri River. These huge impoundments markedly altered discharge regimens, reduced turbidity, changed water chemistry, and promoted growth of phytoplankton which also modified water chemistry. The Public Health Service evaluated limnological modifications and developments inherent in the presence and varied operation of these reservoirs.

Melvin Nolan. Jun 66, 81p

Descriptors: (*Air pollution, *New York), (*Airports, Air pollution), Exhaust gases.
Identifiers: John F. Kennedy Airport, *Queens County (New York), *Nassau County (New York).

A 1-month air-quality study was conducted in the communities adjacent to John F. Kennedy Airport in Queens and Nassau Counties, New York, from September 24 to October 24, 1964. To evaluate the air pollution problem in these communities, especially problems attributable to aircraft operations, eight sampling stations were located in the area. Atmospheric particulate samples were collected at six sampling stations, total atmospheric gaseous hydrocarbon samples, at one, and meteorological measurements were obtained at another station. An odor survey was also conducted as was meteorological data. A questionnaire seeking opinions and experiences relating to air pollution conditions in the vicinity of airports serving other large cities is presented.

REPORT FOR CONSULTATION ON THE METROPOLITAN BILLINGS INTRASTATE AIR QUALITY CONTROL REGION (MONTANA).

Aug 70, 53p APTD-1202

Descriptors: (*Air pollution, *Montana).
Identifiers: *Billings (Montana), *Air quality data.

The Clean Air Act requires the designation of 'air quality control regions' prior to the adoptation of air quality standards and plans for implementation of the standards. A study was thus conducted of the Billings, Montana area. The results of the study are presented in the report. It consists of a description of the region, an emission inventory, meteorology, and urban factors.

RECONNAISSANCE, ECONOMIC BASE ANALYSIS AND FORECAST, GRANDE RONDE RIVER BASIN, UNION COUNTY, OREGON.

Apr 61, 12p Working Paper-1
Report on Columbia River Basin Project for Water Supply and Water Quality Management.

Descriptors: (*Grande Ronde River Basin, *Economic forecasts), (*Oregon, Economic forecasts), River basin development.
Identifiers: *Union County (Oregon).

The survey is for the purpose of providing basic data about the economy of the Grande Ronde River Basin. This data will be utilized in the preparation of the water supply and pollution control recommendations of the U. S. Public Health Service for the Grande Ronde River. For the purpose of this survey, the study area has been defined as Union County, Oregon, and its major communities. The study period is the 50-year period ending in 2010. (Author Mofified Abstract)

PROCEDURES FOR MAKING AN INVENTORY OF AIR POLLUTION EMISSIONS,
August T. Rossano, Jr., and Norman E. Schell. 1957, 17p
Presented at the Golden Jubilee Meeting of the Air Pollution Control Association, St. Louis, Mo., 3 Jun 1957. Special Air Pollution Study of Louisville-Jefferson County, Kentucky.

Descriptors: (*Air pollution, Inventories), Sources.

In conducting an emission inventory, sources may conveniently be divided into two major classes, specific sources, largely industrial, which are studied on an individual basis and multiple sources, those too numerous to be treated individually. This latter class includes automobiles, trucks, residences, apartments, incinerators and many other sources which collectively contribute significantly to urban air pollution. The following discussion will be limited to a description of the air pollution emission inventory presently under development as part of the Special Air Pollution Study of Louisville-Jefferson County, Kentucky.

PROCEEDINGS OF THE FIFTH SYMPOSIUM - PACIFIC NORTHWEST, ON SILTATION - ITS SOURCES AND EFFECTS ON THE AQUATIC ENVIRONMENT, MARCH 23-24, 1959.
1959, 37p

Descriptors: (*Water pollution, *Suspended sediments), Silts, Meetings, Fresh water biology, Turbidity.

Closely tied to water quality control is the significance of aquatic ecology - the aquatic environment. Planning must deal not only with the amount and distribution of water, but also with complex biotic interactions that take place under the surface of these waters. The symposium was concerned with the effects of siltation and turbidity, watershed management, and water uses.

OCEANOGRAPHY AND RELATED ESTUARIAL POLLUTION POROBLEMS OF THE NORTHWEST.
Nov 59, 58p
Proceedings of the Symposium on Water Pollution Research, Pacific Northwest (6th) Held in Portland, Oreg., 17 Nov 59.

Descriptors: (*Estuaries, *Water pollution), Marine biology, Pacific Northwest, Mathematical models, Stratification, Ocean tides.

The report is the sixth of a series of symposiums on subjects related to water pollution research. The symposia was divided into three parts: Factors relating to flushing and exchange; Biological factors; and Measurements. The first part included classification of estuaries, potential significance of upwelling and significance of bottom topography. The second part discussed distribution of marine organisms in estuaries, waste disposal in the marine environment, and the relation of the estuary to marine production. The third part contained papers on models and their use and limitations and the validity of measurements.

A NATIONAL WATER QUALITY BASIC DATA PROGRAM,
Ralph C. Palange, and Stephen Megregian. 1957, 12p
Presented at the Annual Convention, American Society of Civil Engineers, New York, N.Y., October 16, 1957.

Descriptors: (*Water pollution, Monitors).

The report very briefly summarizes a program to provide for continuous determination of the quality of the nation's waters. It is to establish base lines for measuring progress in water quality improvement and for detecting early deterioration of the water resources, and it can provide data useful in selection of sites for municipal and industrial water use, and for other legitimate purposes.

ELECTRONIC ABSORPTION SPECTRA OF INORGANIC AND ORGANIC COMPOUNDS OF NITROGEN: I. NITROGEN DIOXIDE--DINITROGEN TETROXIDE IN SOLUTION,
Aubrey P. Altshuller, Donald Stephens, and Carol Meyers Schwab. 1957, 14p

Descriptors: (*Spectroscopic analysis, Nitrogen dioxide), (*Ultraviolet spectra, *Nitrogen dioxide), Absorption spectra.

The electronic absorption spectra for NO2-N2O4 mixtures has been measured in various non-polar and polar solvents. In non-polar solvents the spectra is very similar to NO2-N2O4 mixtures in the gas state. However, in solvents with unshared electron pairs available particularly ethers, esters, ketones and tertiary amines, a complex multibanded spectra is observed at room temperature. This spectra appears to be characteristic of NO2-N2O4 in those solvents and to be the result of the same electron donor-acceptor type molecular complexes reported previously in the literature at lower temperatures in the solid state. In olefins and n-alkyl amines reactions occur and the products formed are discussed. (Author)

MINUTES OF THE PACIFIC NORTHWEST SYMPOSIUM (4TH) HELD IN PORTLAND, OREGON ON SEPTEMBER 4, 1968,
E. F. Eldridge. 4 Sep 58, 8p

Descriptors: (*Hazardous materials, *Bioassay), Toxicology, Meetings.

The development of industrial, agricultural and household chemicals has reached extensive proportions. Many of these chemicals are highly toxic and are chemically complicated. Since the effects of toxicity are largely biological, it is natural to turn to bioassay as a means of measuring these effects. A major objective of the symposium is to stimulate the use of bioassay and encourage its further development.

PB-216 682
Joint District, Federal and State Project for the Evaluation of Refinery Emissions.
HYDROCARBON LOSSES FROM VALVES AND FLANGES,
Robert K. Palmer. 1 Mar 57, 17p 2

Descriptors: (*Refineries, Air pollution), (*Petroleum refining, Air pollution), (*Air pollution, *Hydrocarbons), (*California, Air pollution), Industrial wastes, Valves.
Identifiers: *Los Angeles County (California).

Hydrocarbon leaks from valves and flanges in refineries may be responsible for appreciable emissions to the atmosphere. Questionnaires were sent out to obtain the number of valves and flanges, classified by service, in the refineries. A testing program was then initiated to obtain the leakage rates from a representative number of these units. Tests indicated that flanges were of minor importance as sources of emissions, having approximately one-tenth the leak frequency of valves. Nearly 10,000 valves were inspected, and the leakage was projected to the total population of 132,000 valves in Los Angeles County refineries. (Author)

EPIDEMIOLOGICAL STUDY OF AN OUTBREAK OF TYPHOID FEVER OCCURRING IN COVINGTON AND NEWPORT, KENTUCKY, AND ADJACENT TERRITORY,
F. C. Dugan, and J. K. Hoskins. 23 Apr 23, 29p

Descriptors: (*Typhoid, *Epidemiology), (*Kentucky, Typhoid), (*Water pollution, Typhoid), Public health, Bacterial diseases, Infectious diseases, Salmonella typhosa, Water supplies.
Identifiers: Ohio River.

The epidemic of typhoid fever in Vovington, Newport and adjacent territory was caused by the polluted water delivered to their consumers by the public water supply systems of those cities. The present treatment of the Covington supply, consisting of storage and chlorination as now provided, is inadequate, and cannot be relied upon to produce a safe effluent at all times. The crude method of application of chemicals for the purpose of coagulation of the Newport supply is not carefully regulated and is ineffective. Raw Ohio River water is absolutely unfit for human consumption without proper purification. These cities must expect recurrent epidemics of intestinal, water-borne diseases such as typhoid fever, dysentery and diarrhea, until all of the water supplied to their citizens is properly purified by a modern treatment plant. PROCEEDINGS OF WATER RESOURCES WORKSHOP HELD AT DALLAS, TEXAS ON 24-26 MAY 1961.
May 61, 326p

Descriptors: (*Water resources, *Meetings), Water supply.

Contents: Water quality control as a major factor in water resources management; Population forecasting - methodologies and merits; Growth factors in economic base studies; Location factors; Projecting water requirements in the boondocks; Agriculture - effects on water demands; Estimating future water demand; Must water treatment be high priced; Must stream quality be maintained; Principles and policies for the evaluation and reimbursement of water supply and pollution abatement benefits from federal water storage projects; Should the public health service take a stand and make secondary treatment mandatory; A review of conclusions and agreements for future action.

PB-216 688
Federal Water Pollution Control Administration, Fresno, Calif. San Joaquin Project.
THE ANAEROBIC FILTER FOR THE DENITRIFICATION OF AGRICULTURAL SUBSURFACE DRAINAGE,
Thomas A. Tamblyn, and Bryan R. Sword. 1969, 34p
Presented at the Annual Purdue Industrial Waste Conference (24th), Lafayette, Indiana, 7 May 69.

Descriptors: (*Irrigation, Water pollution), (*Chemical removal (Water treatment), *Nitrogen), (*Water pollution, *Inorganic nitrates), (*Anaerobic processes, Chemical removal (Water treatment)), San Joaquin Valley.
Identifiers: *Denitrification.

The vast majority of the saline agricultural wastewater that is presently being generated within the San Joaquin Valley is discharged to the San Joaquin River. As the quantity of this waste increases, the waste load on the river would reach a point of extreme unacceptability. The San Joaquin River would become saline and downstream users would be deprived of a usable water supply. For these reasons, a system is now under construction to collect much of the saline drainage and transport it to a 'safe' disposal site. The material presented describes the operation of upflow anaerobic filters operated to determine if nitrate-nitrogen could be efficiently removed from the subsurface agricultural drainage. Filters of three sizes (4-, 18-, and 36-inch diameters) were operated under field conditions.

DETECTION OF AROMATIC ALDEHYDES.

1957, 5p

Descriptors: (*Aldehydes, *Spectroscopic analysis), Aromatic compounds, Colorimetric analysis.
Identifiers: Aceti anhydride/trifluoro.

The report discusses an investigation of a method to estimate polynuclear aromatic aldehydes. Essentially the procedure involves the reaction of the aldehyde with trifluoroacetic anhydride to form an arylidene di (trifluoroacetate). Then trifluoroacetic acid initiates condensation of the di (trifluoroacetate) with the hydrocarbon to form a diarylmethane type of dye. A fairly strong acid media is essential for complete ionization and solution of the dye. (Author Modified Abstract)

Public Health Service, Washington, D.C.
PRELIMINARY DESIGN EXPERIMENTAL WATER TREATMENT PLANT,
Conrad P. Straub. 1973, 14p

Descriptors: (*Water treatment, *Radioactive contaminants).

On October 29, 1948, a report (ORNL 48-10-377) prepared by O.R. Placak and R.J. Morton appeared entitled 'Proposal For Evaluating The Impact of Water-Borne Radioactive Contaminants On Sanitary Engineering Facilities'. This report called attention to the need for investigating the effect of radioactive substances upon the design and operation of sanitary facilities utilized by civilian or military populations, since limited background knowledge is available on this subject. They recommended that an experimental plant for the study of this problem should be provided. This report is concerned primarily with the design of the experimental water treatment plant facilities and of their approximate costs. (Author)

EXAMINATION INTO THE EFFECTIVENESS OF THE CONSTRUCTION GRANT PROGRAM FOR ABATING, CONTROLLING, AND PREVENTING WATER POLLUTION.
3 Nov 69, 183p

Descriptors: (*Sewage treatment, *Project management), (*Investigations, *Government policies), Effectiveness, Contracts.
Identifiers: *Water pollution control.

Because of the substantial expenditure of Federal funds and expressed interest of several congressional committees in the water pollution control program, the General Accounting Office has examined into the effectiveness of the Federal Water Pollution Control Administration's (FWPCA) construction grant program for abating, controlling, and preventing water pollution. These projects have contributed to abating water pollution because the problem would have been worse if the projects had not been constructed. GAO believes, however, that the benefits have not been as great as they could have been because many waste treatment facilities have been constructed on waterways where major polluters--industrial or municipal--located nearby continued to discharge untreated or inadequately treated wastes into the waterways. The names of the rivers and municipalities have not been identified in the examples because the purpose of the examples is to demonstrate the existence of a problem. The program to date has been administered for the most part using a shotgun approach--awarding construction grants on a first-come-first-served or readiness-to-proceed basis. Little consideration has been given to the immediate benefits to be attained by the construction of individual treatment plants. (Author Modified Abstract)

WATER SUPPLY AND WATER QUALITY CONTROL STUDY. TILLER AND GALESVILLE PROJECTS, UMPQUA RIVER BASIN, OREGON.
Sep 66, 50p

Descriptors: (*Umpqua River Basin, *Reservoirs), (*Oregon, *Water resources).
Identifiers: *Douglas County (Oregon).

The purpose of this report is to define the need for and the value of storage for municipal and industrial water supply and for water quality control in the Tiller and Galesville projects, currently under study by the U.S. Army Corps of Engineers. The study area considered is the Umpqua River Basin, but particular attention has been given to the service areas and stream reaches of the South Umpqua, Cow Creek, and the main stem Umpqua that could be influenced by storage releases from the Tiller or Galesville sites. Projections of future waste loads, water quality, and water use have been developed for 1980, 2000, and 2020, based on the resource potential of Douglas County. (Author Modified Abstract)

AN INDUSTRIAL WASTE GUIDE TO THE COMMERCIAL LAUNDERING INDUSTRY.

1948, 13p PHS-Pub-509

Descriptors: (*Laundries, *Water pollution).

Liquid wastes from commerical laundries which can contaminate water contain 'soil,' starch, dye traces, and lint removed from fabrics plus residuals of washing agents, alkali, and other chemicals. Appreciable waste reduction can be accomplished by avoiding over-use of washing agents and the control of washer loads in order to achieve the optimum ratio between washing agents and clothing load. A very large portion of commercial laundry wastes are discharged directly to municipal sewage systems and treated in admixture with domestic sewage. Considerable experimental work on the separate treatment of laundry wastes with trickling filters is reported in the literature. In actual practice, some laundry wastes are being treated by chemical flocculation and sedimentation. Further purification may be obtained by lagooning and sand filtration. (Author)

THERMAL INACTIVATION OF COXIELLA BURNETII IN MILK PASTEURIZATION.
Monograph,
John B. Enright, Walter W. Sadler, and Robert C. Thomas. Jan 57, 37p PHS-M-47, PHS-Pub-517
Library of Congress catalog card no. 57-60053.

Descriptors: (*Food sanitation, Milk), (*Milk, Coxiella burnetii), (*Coxiella burnetii, *Thermal stability), (*Pasteurizing, Milk), Food sanitation, Food processing, Q fever, Infectious diseases, Public health.

In recent years, a significant number of human cases of Q fever have occurred in the United

States, some of which have been attributed to the consumption of milk. Upon investigation, it was ascertained that Q fever in cattle, goats, and sheep is endemic in certain western and southwestern States. It was observed that the danger of transmission of the disease to man could be reduced by slight changes in the procedures for pasteurizing milk. Because of the need for precise information as to the pasteurization times and temperatures necessary to assure destruction of the Q fever organism, the Public Health Service, in cooperation with the University of California, established a research project ot study the thermal destruction of this organism. Details about the research project and the new pasteurization recommendation which resulted from it are described in this monograph.

MINIMUM REQUIREMENTS FOR PREVENTION OF INDUSTRIAL WASTES POLLUTION. RECOMMENDED SEWAGE WORKS DESIGN STANDARDS. WATER QUALITY OBJECTIVES,
E. F. Eldridge, Kenneth Spies, Emil C. Jensen, and H. C. Clare. Sep 52, 100p

Descriptors: (*Industrial waste treatment, Recommendations), (*Sewage treatment, Design).

The report briefly summaries the minimum requirements for the following industrial wastes: Slaughterhouses and meat packing plants, Poultry killing and packing plants, Milk plants, Canneries, Wineries, Breweries, Saw mills, Veneer mills, Oils, Tanneries, Beet sugar factories, Coal washeries, Gravel washeries, Flax processing, Dehydration-potatoes and fruits, metal industry, and pulp and paper mills. Also discussed are opinions as to current approved practice and suggestions regarding many of the details of design.

A PILOT PROBLEM-ORIENTED COMPUTER LANGUAGE FOR HYDROLOGY AND HYDRAULIC ENGINEERING ('HYDRO'),
G. Bugliarello, W. D. McNally, J. T. Gormley, and J. T. Onstott. 15 Aug 66, 41p
Contract PHS-WP-00415
Presented at the AGU Meeting (47th), Washington, D. C., April 1966.

Descriptors: (*Hydrology, Hydraulic models), (*Computer programming, Hydrology), Mathematical models, ALGOL, FORTRAN.
Identifiers: *HYDRO computer program.

The philosophy, specifications and operational characteristics of a problem-oriented computer language, HYDRO, for performing hydrological and hydraulic engineering analyses are presented. The present version of HYDRO is intended as a pilot for further development of the concept of problem-oriented languages in the field of water resources. It encompasses the areas of precipitation analysis, hydrograph analysis, open channel hydraulics, flood routing, and frequency analysis. (Author Modified Abstract)

Joint District, Federal and State Project for the Evaluation of Refinery Emissions.
HYDROCARBON LEAKAGE FROM PRESSURE RELIEF VALVES,
Bernard J. Steigerwald. May 57, 27p 3

Descriptors: (*Refineries, Air pollution), (*Petroleum refining, Air pollution), (*Air pollution, *Hydrocarbons), (*California, Air pollution), Industrial wastes, Relief valves.
Identifiers: *Los Angeles County (California).

One phase of the Joint District, Federal and State Project for the Evaluation of Refinery Emissions was the study of hydrocarbon leakage from pressure relief valves. The report details the techniques and conclusions of the study. The seven major refineries in the Los Angeles area, processing about 90 per cent of the local crude throughput, reported a total of 1100 relief valves on operational units and 350 relief valves on pressure storage vessels. Field tests made on 460 valves indicated an average leak for valves on operational units of 2.9 pounds per day per valve while pressure storage valves leaked an average of 0.4 pounds per day per valve. The total hydrocarbon leakage, calculated by projecting the field test data to the reported number of valves in each group, was found to be 3500 pounds per day. This figure includes only continual leakage through the valve seat. Emissions due to relief valve blowoff were not considered in the study. (Author)

WATER AND SEWER BOND SALES IN THE UNITED STATES.
Rept. for Jan-Dec 62.
Dec 62, 12p PHS-Pub-965-1962

Descriptors: (*Sewage treatment, *Financing), (*Water treatment, *Financing), United States, Tables (Data).
Identifiers: *Bonds.

The report contains data which are basic and necessary to efficient management of water supply and pollution control programs. It reflects, in a measure, the extent of financing to fulfill these two important public services in a growing nation. The basic information from which these tables were developed was obtained from the Investment Bankers Association by special arrangement. It is believed these tables present information not otherwise readily available. Data are presented in three categories according to the use of the proceeds from the sale: (1) WATER when the bonds have been sold to finance water facilities; (2) SEWER, to finance sewage facilities; and (3) COMBINATION, to finance jointly water and sewage facilities where the portions attributable to each type are not designated. It should also be noted that these data describe only those sales reported to the Investment Bankers Association. (Author Modified Abstract)

AIR POLLUTION MANUAL OF CODING. A CODING SYSTEM FOR THE IDENTIFICATION OF BASIC EQUIPMENT AND CONTROL DEVICES USED IN INDUSTRIAL PROCESSING,
Peter Loquercio, and William J. Stanley. 1968, 67p

Descriptors: (*Air pollution, *Coding), (*Information retrieval, Air pollution), Sources, Industries.
Identifiers: *Emission factors.

The Manual is prepared in two parts. Part I lists some of the industrial activities by their Standard Industrial Classification number and the equipment associated with the air pollution sources found in that activity. Part II illustrates the code numbers assigned to the equipment; two digit numbers representing control devices while the three digit numbers are assigned to the basic equipment. By definition, basic equipment is equipment from which the pollutant is primarily discharged. The basic equipment is further categoried by assigning a series of numbers according to the 'unit process' under which it may be found.

THE DEVELOPMENT OF METHODS FOR USING BIOASSAYS IN THE CONTROL OF PULP MILL WASTE DISPOSAL,
Charles E.Warren, and Peter Doudoroff. 1957, 25p
Prepared in cooperation with Oregon State Coll., Corvallis. Dept. of Fish and Game Management.

Descriptors: (*Paper industry, *Water pollution), (*Bioassay, Water pollution), Industrial wastes, Toxicology, Benthos.

The paper is a discussion of research at Oregon State College in methods of determining permissible concentrations of pulp mill wastes in receiving waters by means of bioassays and application factors. Standard and convenient toxicity bioassay methods are being developed, and application factors for making use of the results of these bioassays are being determined experimentally in part by means of 'artificial streams' approximating natural conditions. Pulp mill wastes, whose acute toxicity has already been evaluated by means of bioassays, are introduced continuously in varying amounts into these streams for periods as long as one month. A similar approach is being developed for the control of the discharge of pulp mill wastes so that resulting 'slime' production can be maintained at biologically harmless levels.

DEWATERING OF SEWAGE SLUDGE ON GRANULAR MATERIALS.
Rept. no. 2 (Final),
John H. Mebiker, and Thomas G. Sanders. Jun 68, 144p EVE-9-68-3, RR-1
Grant NSF-GK-924, FWPCA-01239-02

Descriptors: (*Sludge disposal, *Dewatering), (*Sewage treatment, Dewatering).
Identifiers: Sludge treatment.

A theoretical analysis of gravity dewatering of wastewater sludge is made, and an equation describing the drainage rate developed. The equation relates the depth of sludge with time, using the parameters of solids content, specific resistance, coefficient of compressibility, and dynamic viscosity and density of the filtrate. Extensive bench-scale tests substantiated the theory. The concept of media factor is introduced to account for the role of the supporting media. Potential applications of the equation developed are discussed. (Author)

THE BIOLOGY AND CHEMISTRY OF 'SPHAEROTILUS'.
Progress rept. 1 Jun 61-1 Sep 63,
J. L. Stokes. 10 Sep 63, 34p
Contract PHS-WP-00239

Descriptors: (*Sphaerotilus, *Biochemistry), (*Microbiology, Sphaerotilus), Nutrition, Aerobic bacteria, Metabolism, Growth, Carbon, Nitrogen, Manganese, Iron, Butyric acid.
Identifiers: *Iron bacteria, *Sphaerotilus discophorus.

Eleven pure cultures of Sphaerotilus discophorus were isolated from streams, rivers and lakes by appropriate enrichment culture techniques. The morphology of the colonies, filaments and individual cells was investigated in detail. The carbon, nitrogen, mineral and growth factor requirements of S. discophorus were determined. The effects of pH, temperature and oxygen on growth were established. The extent to which iron and manganese are accumulated in the sheaths of S. discophorus was determined by quantitative analyses. The oxidative patterns of S. discophorus with carbohydrates, amino acids and TCA cycle intermediates were determined and the occurrence of a high degree of oxidative assimilation was established. Large amounts of poly-beta-hydroxybutyric acid were found in the cells of both S. discophorus and S. natans. Preliminary investigations were also made on the problem of chemoautotrophy in Sphaerotilus. (Author)

MICROBIOLOGY OF ANAEROBIC SLUDGE.
Terminal rept. 1 Jun 66-31 May 69,
Robert A. Mah. 31 May 69, 40p
Contract WP-00092I-03

Descriptors: (*Anaerobic processes, *Microbiology), (*Sewage treatment, Anaerobic processes), Fermentation.
Identifiers: Methane bacteria.

Studies on the microbiology of anaerobic sludge disclosed that nonmethanogenic strictly anaerobic bacteria comprised one of the most numerous groups of organisms present. Euryoxic bacteria constitute only a minor fraction of the normal bacterial flora but can become predominant in very short time if fermentable carbohydrates are present. This finding emphasizes the necessity of using unenriched fermentations for studying the sludge digestion process. Lipids are the main substrates responsible for generation of acetate in the unaltered normal sludge fermentation. Organisms responsible for lipid decomposition are apparently slow-growing and are washed out of the digestor at short retention times. Recycling of the bacteria would enable the operator to shorten retention time without a loss in efficiency of decomposition. (Author)

PROCEDURE FOR THE BACTERIOLOGICAL EXAMINATION OF FOOD UTENSILS AND/OR FOOD EQUIPMENT SURFACES.
Technical information bulletin no. 1.

1960, 8P PHS-Pub-1631

Descriptors: (*Food processing, *Bacteriology), (*Food, Equipment), Standards, Food sanitation, Public health.

The Public Health Service recommends a standard of not more than 100 colonies per utensil, or surface area of equipment swabbed. Though this standard does not take into consideration the types of microorganisms present or their public health significance, it does offer a general index of utensil and equipment sanitation. When counts from a particular establishment are frequently or consistently in excess of the standard, improvement of its washing, sanitizing, handling, and/or storage practices is usually indicated. For equipment on which five areas of approximately 8 sq. in. each have been swabbed, residual bacterial counts not exceeding 500 are satisfactory.

LIMITATIONS OF EUGLENIDAE AS POLLUTED WATER INDICATORS,
James B. Lackey, and Russell S. Smith. 1939, 12p

Descriptors: (*Scioto River, Euglenophyta), (*Euglenophyta, *Indicator species), (*Water pollution, Indicator species), Ecology, Aquatic biology, Sewage, Biological surveys.
Identifiers: *Water pollution detection.

Criteria of stream pollution may be all too evident in turbid, highly colored, offensive smelling streams. But often relatively clear sparkling streams need laboratory examination to determine the nature and extent of their pollution. Biological examinations may include several features as the microscopic life present, or the animals living in or on the bottom. For sometime it has been stated that the presence of certain microscopic organisms in abundance is a sure indication of organic pollution, usually domestic sewage. One of the groups used in this fashion has been the 'Euglenas and their allies', a related group of green flagellates. The report discusses their presence on the Scioto River in Ohio.

Descriptors: (*Water pollution, Fresh water biology), (*Photosynthesis, Water pollution), (*Phenols, Water pollution), (*Pesticides, Water pollution), Chlorophyll, Toxicology.
Identifiers: *Water pollution effects (Plants), Chlorella pyrenoidosa.

The report describes the potential reduction of dissolved oxygen in ponds and streams due to chlorophyll inhibition resulting from certain industrial wastes. Emphasis is placed on the laboratory techniques developed for this study and the changes that should be incorporated in waste stabilization pond designs. The relative toxicity of 33 phenolic-type compounds and 8 pesticides to Chlorella pyrenoidosa was evaluated. (Author Modified Abstract)

KENTUCKY RIVER BASIN REPORT ON THE BENEFITS TO POLLUTION ABATEMENT AND WATER SUPPLY RESULTING FROM LOW--FLOW AUGMENTATION.

Jul 57, 34p

Descriptors: (*Kentucky River Basin, *Water pollution), (*Kentucky, Water pollution), Water supply.
Identifiers: Low flow.

In accordance with a request dated July 26, 1956, from the office of the District Engineer, Louisville District, Corps of Engineers, U.S. Army, the Public Health Service has conducted a study of the water supply and waste disposal problems of the Kentucky River Basin. This report evaluates the pollution abatement and public-water-supply benefits resulting from projected low-flow augmentation in the Kentucky River and its major tributaries. REPORT ON AN INVESTIGATION OF POLLUTION OF GROUND WATER IN THE GRANTS - BLUEWATER, NEW MEXICO, AREA,
Robert P. Lowe, Joe Anderson, F. W. Kittrell, A. Fitch, and E. C. Peterson. 1956, 25p
Prepared in cooperation with Public Health Service, Dallas, Tex. Region VII, Robert A. Taft Sanitary Engineering Center, Cincinnati, Ohio, and The Anaconda Company, Bluewater, New Mexico.

Descriptors: (*Industrial wastes, *Water pollution), (*New Mexico, Water pollution), Uranium ores.
Identifiers: *Uranium ore processing, *Valencia County (New Mexico).

The New Mexico Department of Public Health requested the assistance of the Public Health Service in an investigation of waste disposal at the uranium ore milling plant of the Anaconda Company at Bluewater, New Mexico. The investigation was undertaken because of concern over possible pollution of groundwater in the Grants-Bluewater area. The Health Department expressed particular concern over the possibility of excessive nitrates from the mill wastes polluting the wells that serve as the source of municipal water supply for Grants, New Mexico. The report summarizes activities and data available to date, and suggests the direction in which the investigation should continue.

CONFIDENCE LIMITS FOR AN UNKNOWN CONCENTRATION ESTIMATED FROM LINEAR CALIBRATION.
Technical information series,
Eugene K. Harris. Jul 58, 8p R58AGT494

Descriptors: (*Chemical analysis, Confidence limits).

Initial study of an analytical method for determining the amount of some substance frequently leads to a calibration curve on which the response of a test indicator are plotted against carefully measured amounts of the substance. In practice, however, such a curve is used to estimate an unknown amount of substance from an observed value of the indicator variable - exactly converse to the way in which it is prepared. Berkson has shown that this estimation is valid when the relationship between substance (x) and indicator (y) is linear, provided that in obtaining the calibratiin line an attempt is made to measure x to certain predetermined amounts. The estimation of x from y is not invalidated by the fact that the original measurement of x may have been subject to error. The purpose of the note is to call attention to confidence limits available for such an estimate. (Author)

SEWAGE AND WATER WORKS CONSTRUCTION, 1962.
Annual rept.
Apr 63, 16p PHS-Pub-758-1962
See also PB-216 704.

Descriptors: (*Sewage treatment, *Contracts), (*Water treatment, *Contracts), Inventories, United States.
Identifiers: *Sewage treatment plants.

The annual report of 'Sewage and Water Works Construction 1962' is published as one part of the basic data program required and authorized in Public Law 660 the Federal Water Pollution Control Act. The data published provide a continuing and ready source of information and reference as to how successfully the national needs in municipal water supply and pollution control are being met through construction of the necessary physical facilities. This publication also establishes important year-to-year cost trends in the national economic picture in the three types of public works construction involved. (Author Modified Abstract)

WATER RESOURCES STUDY AND PUBLIC HEALTH ASPECTS OF THE JEFFERSON AND WHITEHALL UNITS THREE FORKS DIVISION MISSOURI RIVER BASIN PROJECT MONTANA.

Apr 64, 68p

Descriptors: (*Missouri River Basin, *Reservoirs), (*Montana, Water resources), Jefferson Reservoir, Whitehall Reservoir, Insects.

The objectives of the study were to assess the probable effects of project construction and operation on water quality in local streams and reservoirs, to ascertain the benefits or harm resulting from changes in water quality, and to examine the need for regulation of streamflow for the purpose of water quality control in the principal streams affected. Need for regulation of streamflow was studied not only in light of present conditions, but also under anticipated economic development of the years 1985, 2010, and 2060. The report also includes the results of a study of general public health aspects and insect vector control of the project. A preliminary evaluation is presented of the insect vector problems that may be associated with the development of the Jefferson and Whitehall Irrigation Units. (Author)

SENSITIZING THE 4-AMINOANTIPYRINE REACTION WITH PHENOLIC MATERIALS FOR USE IN WATER AND WASTE ANALYSIS,
M. B. Ettinger, C. C. Ruchhoft, and R. J. Lishka.
6 Sep 50, 38p
Presented at the National Meeting of the American Chemical Society (118th) at Chicago, Illinois, on 3-8 September 1950.

Descriptors: (*Water analysis, *Phenols), (*Colorimetric analysis, Phenols), (*Spectroscopic analysis, Phensols), Dyes.
Identifiers: Antipyrine/amino, *Water pollution detection.

The use of 4-aminoantipyrine was proposed by Emerson in a new color test for phenols. As outlined by Emerson, the essentials of the reaction consist of bringing together the phenolic material, the 4-aminoantipyrine and an alkaline oxidant in a solution of sufficiently high pH to prevent the formation of antipyrine red. Potassium ferricyanide was recommended as the oxidant. The work to be described has had two goals: Evaluation of the reaction variables which affect usage of Emerson's reagent for the determination of the simpler phenols; and Devising a procedure sufficiently sensitive to detect a one p.p.b. concentration of phenol.

TREATMENT OF INDUSTRIAL WASTES IN MUNICIPAL SEWAGE TREATMENT PLANTS,
Hayse H. Black. 1953, 9p
Presented at the Southern Municipal and Industrial Waste Conference (2nd), University of North Carolina, Chapel Hill, N.C. 19 March 1953.

Descriptors: (*Sewage treatment, *Industrial wastes).

The continued search for economical methods for treatment of industrial wastes may be expected to keep combined treatment with domestic sewage ever in the foreground. In addition, there is the intangible aesthetic value of removing waste treatment from the premises of industrial establishments. It is the responsibility of industry to control the process waste discharge to the sewers in such manner that combined treatment is feasible. THIS CONCEPT IS DISCUSSED.

DEVELOPMENT OF A COMPREHENSIVE WATER POLLUTION CONTROL PROGRAM FOR THE MISSOURI-SOURIS-RED RIVER BASINS.

Jun 66, 13p

Descriptors: (*Missouri River Basin, *Water pollution), (*Souris River Basin, *Water pollution), (*Red River Basin, *Water pollution).

The report discusses a water pollution control plan for the Missouri-Souris-Red River Basins. The objectives are to restore and preserve the quality of surface and ground water to protect public health and to meet the public's desires and expectations for clean water. The program will meet these objectives in a highly efficient manner through systematic application of a combination of water pollution control measures. These measures include: (1) elimination or reduction of pollution at its source; (2) removal of polluting materials from waste water discharges by treatment methods; (3) control of times of release of waste waters to minimize pollutional effects; and (4) after application of treatment and control at the source, by regulation of streamflow for water quality control. REPORT OF RESULTS OF SAMPLING THE ATMOSPHERE IN THE DETROIT RIVER AREA DURING 1952,
George D. Clayton, Paul M. Giever, and Harold W. Baynton. 1 Jan 54, 171p

Descriptors: (*Air pollution, *Michigan).
Identifiers: *Air quality data.

A Reference signed on January 12, 1949 required a comprehensive air pollution investigation in the Detroit River area. To answer the questions in the Reference, the following objectives were established to (1) determine the sources, nature and amounts of atmospheric contaminants resulting from combustion of fuels, (2) determine the sources, nature and amounts of atmospheric contaminants resulting from industrial processes, (3) determine the effects of meteorological factors on the dissemination and diffusion of atmospheric contaminants, (4) determine the effect of the atmospheric contaminants upon (a) health, (b) vegetation, (c) safety, and (d) economy, and (5) determine controls necessary (vessels only). (a) Cost, and (b) by whom should the cost be borne. The report presents the environmental and meteorological findings obtained in 1952 and correlation of these data with those obtained in 1951.

BENTHONIC INVERTEBRATES AS AN INDEX OF WATER QUALITY.
Progress rept. Sep 62-Sep 64,
Theodore A. Olson, and Myrtle E. Rueger. Sep 64, 56p
Grant PHS-WP-320

Descriptors: (*Benthos, *Aquatic animals), (*Indicator species, *Water pollution), (*Ecology, Benthos), Invertebrates, Oxygen.

The long term goal of the project is the evaluation of the ecology of benthic invertebrates which may be useful as indicators of water quality or as indicator organisms in bioassay studies. The present study determines the individual oxygen consumption rates of common benthic invertebrates. It was decided that the Warburg apparatus would be used to make preliminary respiratory studies on aquatic invertebrates. By using the same individuals of members of the same species in the Warburg apparatus and the flow-through electro-chemical system, a comparison was made of the two systems.

TRAVEL OF SYNTHETIC DETERGENTS WITH PERCOLATING WATER.
Annual rept. no. 2,
Stephen A. Klein, David Jenkins, and P. H. McGauhey. 30 Dec 62, 67p

Grant PHS-WP-207-C2

Descriptors: (*Biodeterioration, Detergents), (*Sulfonates, Plant growth), (*Surfactants, Plant growth), (*Plant growth, *Detergents), Soil chemistry, Percolation, Inhibitors.
Identifiers: *Water pollution effects (Plants).

The rapid rise of population in the United States, with a framework of urban-industrial economy dependent on the water-transport of wastes, foretells an ever-increasing proportion of its over-all water resources will be used water. Alarm has been rising over the presence of refractory materials in waste waters; and alkylbenzenesulfonate (ABS) has been the object of most investigative work. In the western United States the fate of ABS in soils is of more than academic importance. Substitution of sewage or sewage effluents for the normal source of irrigation water, poses the question of whether the value of the water in sewage and sewage effluents is in any way decreased by its contaminants. The experiments described concern maximizing the ABS-degradation capabilities of soils involved laboratory-scale column studies and studying the effect of ABS on plant growth, and the uptake by plants.

RADIOACTIVE MATERIALS AND THEIR EFFECTS ON ENVIRONMENTAL HEALTH,
Conrad P. Straub. 1951, 36p
Contract W7405-eng-26

Descriptors: (*Public health, *Ionizing radiation), Radiation hazards, Radiation dosage, Permissable dosage, Radiotherapy, Radioactive isotopes, Water pollution, Air pollution.
Identifiers: *Radioecology.

Ionizing radiations result from the disintegration of unstable nuclei, and it is these radiations that are damaging to living tissue. The irradiation in which one is interested may originate from an external source or from radioactive materials within the body. Radiation effects from radioactive materials within the body depend upon several factors: the quantity of radioactive material absorbed in the body; the type of radiation, whether alpha, beta, gamma, etc.; the energy; the point of localization; the rate of excretion from the body; and the half-life of rate of decay of the material. All of these factors are considered in evaluating the maximum permissible concentration (MPC) for each radioisotope in water or air. The MPC values under consideration for release by the Subcommittee on Internal Dose of the National Committee on Radiation Protection are indicated.

GENERATOR FOR PRODUCING HIGH CONCENTRATIONS OF SMALL IONS.
Technical rept.,
K. T. Whitby, A. R. McFarland, and D. A. Lundgren. Jul 60, 59p TR-12
Grant PHS-S-23

Descriptors: (*Ion sources, Design).

A novel free ion generator capable of producing high concentrations of light ions with high efficiency has been developed. The generator is capable of producing positive, negative or an equal mixture of positive and negative ions. During the course of development of a generator for making homogenous aerosols from methylene blue by the evaporation of alcohol or water solutions of the dye, it was found that the generated particles were highly charged under certain conditions. It was eventually found that the only practical method for neutralizing these particle charges was by mixing the particles with a high concentration of mixed positive and negative small ions. The report describes the ion generator used to neutralize these particle charges. (Author Modified Abstract)

BIO-ASSAY INVESTIGATIONS, SOCONY MOBIL OIL COMPANY, BUFFALO, NEW YORK,
Croswell Henderson, and H. A. Anderson. 1956, 19p

Descriptors: (*Buffalo River, *Water pollution), (*Refineries, Water pollution), (*Bioassay, *Industrial wastes), (*New York, Water pollution), Fresh water fishes.
Identifiers: *Water pollution effects (Animals).

In January 1956, field studies were initiated on a cooperative basis to determine the possible effects of industrial wastes from major Buffalo River industries on the eastern end of Lake Erie and the Niagara River. Buffalo River industries cooperating in this project were National Aniline Division, Allied Chemical and Dye Corporation, Donner-Hanna Coke Corporation, and Socony-Mobil Company. The report covers an investigation of the toxicity to fish of intake waters and major effluents from the Socony-Mobil Oil Company. Refinery wastes contain some chemical compounds which are known to be toxic to aquatic life in relatively low concentration. Bio-assays were made to evaluate directly the toxicity of these complex wastes.

REPORT ON WATER POLLUTION CONTROL. LITTLE COLORADO RIVER DRAINAGE BASIN. ARIZONA-NEW MEXICO.
Water pollution series.

Apr 73, 57p PHS-Pub-250, PHS-WPS-43

Descriptors: (*Little Colorado River Basin, *Water pollution), (*Arizona, Water pollution), (*New Mexico, Water Pollution).

The report is based upon data available as of January 15, 1953, and has been compiled through and in cooperation with the state water pollution control agencies, but should not be considered a detailed engineering investigation of the Little Colorado Sub-Basin. The sub-basin report present information about the ways the water resources of the area are used, the pollution entering these water resources and the resulting damages, the benefits which may result from pollution prevention and abatement, pollution prevention measures not in effect, and those which appear to be needed.

WATER QUALITY DATA - AN INCREASING NATIONAL NEED,
Ralph C. Palange, and Stephen Megregian. 1958, 13p

Descriptors: (*Water analysis, *United States), (*Water pollution, United States), Monitors.
Identifiers: *Water pollution sampling.

The objective of the described research has been the establishment of 50 water sampling stations on the Great Lakes and interstate streams of the United States. At each of these stations, samples of raw water are being collected periodically and analysed for radioactivity, organic chemical content, plankton populations, coliform organisms, and the conventional physical and chemical determinations.

DISPOSAL OF CHEMICAL SLUDGES AND BRINES,
Robert B. Dean. May 70, 10p
Presented at the Symposium on Coal Mine Drainage Research (3rd) Held at Mellon Inst., Pittsburgh, Pa., 19-20 May 70. Sponsored in part by the Ohio River Valley Water Sanitation Commission.

Descriptors: (*Water pollution, *Mine waters), (*Industrial waste treatment, Mine waters), Dewatering, Sludge disposal.
Identifiers: *Mine acid drainage.

The disposal of pollutants in mine drainage is difficult because they are diluted with so much water. Sale of extracted pollutants is not economical. Acid can be neutralized but sulfates are left in solution. Iron can be precipitated but the precipitate is one of the most difficult to dewater. Ultimate disposal of solids will be to the land, either in dumps or spread thinly on pasture or woodland. Brines too strong to be accepted in surface waters must go to permanent storage or to the ocean. The paper has reviewed available processes for dealing with mine drainage and points out difficulties and advantages associated with them. (Author)

PHYSICAL-CHEMICAL TREATMENT OF MUNICIPAL WASTEWATER,
Dolloff F. Bishop, Thomas P. O'Farrell, and John B. Stamberg. Oct 70, 40p
Presented at the Annual Conference of the Water Pollution Control Federation (43rd) at Boston, Mass., 4-9 Oct 70.

Descriptors: (*Sewage treatment, Design).
Identifiers: *Physical chemical treatment.

Physical-chemical treatment of the District of Columbia raw wastewater in a 100,000 gal/day pilot plant with a 3.2:1 diurnal flow variation is described and consisted of two-stage lime precipitation with intermediate recarbonation, filtration, pH control, ion exchange, and carbon adsorption. The complete system removed 98% of the phosphorus, 95% of the organics and 78% of the total nitrogen. (Author Modified Abstract)

ADAPTATION BY MICROBIAL POPULATIONS.
Progress rept., 1 Sep 65-15 Jan 66,
Norman C. Dondero, and T. B. S. Prakasam. 1966, 71p
Grant PHS-WP-00645-03

Descriptors: (*Sludge, *Culture media).

Cultural studies of the general flora of activated sludge require a medium as non-selective as can be accomplished. In the present investigation, culture media for obtaining maximal bacterial counts of activated sludge and sewage were evaluated. In these studies, the viable counts of settled sewages and activated sludges from three treatment plants were compared on several agar culture media. In the report's descriptions of plating experiments, the activated sludge extract (ASE) agars were inoculated with portions of the same sample of activated sludge from which the extracts were prepared.

SUSQUEHANNA RIVER BASIN - JUNIATA RIVER. A COOPERATIVE STATE-FEDERAL REPORT ON WATER POLLUTION CONTROL.
Water pollution series.
May 51, 77p PHS-Pub-251, PHS-WPS-44
Prepared in cooperation with Pennsylvania Department of Health, Philadelphia.

Descriptors: (*Juniata River, *Water pollution), (*Susquehanna River Basin, *Water pollution), (*Pennsylvania, Water pollution).

The report describes the status as of May 1951 of the comprehensive water pollution control program conducted by the Pennsylvania Sanitary Water Board in the Juniata River Basin, a subbasin of the Susquehanna River Basin. It sets forth information about the ways the water resources of the area are used, the pollution entering those water resources and the resulting damages, the benefits which may result from pollution prevention and abatement, pollution prevention measures in effect, and those which appear to be needed. Its

scope is limited to surface water pollution control. Ground water pollution has not been considered in the report although usage of ground water is mentioned. (Author)

DISPOSAL OF RADIOISOTOPES - A METHOD OF EVALUATING POTENTIAL HAZARD,
Conrad P. Straub. 1973, 28p

Descriptors: (*Radioactive isotopes, *Hazards).

Brief mention is made of techniques now in use for determining radioisotope hazard. A study was made of data available from the Operations Division, Oak Ridge National Laboratory on radioisotope shipments. Since the number of curies of each radioisotope shipped are known and the maximum permissible concentration for that radioisotope has been suggested, the volume of water required for dilution to the tolerance concentration could be determined. These computations, which were based on several stated assumptions and included the effects of decay, show that there is immediate need for setting standards and procedures for the safe handling and disposal of strontium and perhaps other long-lived radioisotopes. MORPHOLOGICAL IDENTIFICATION OF SOME ORGANIC ACIDS AS THE SODIUM SALTS,
Bernice R. Havlik, Lawrence M. Marshall, and James P. Lodge, Jr. 1958, 6p

Descriptors: (*Aliphatic acids, *Crystal growth), Organic salts, Diffusion.

In a previous investigation of the characterization of organic acids by quantitative microdiffusion it was observed that a number of the acids gave large characteristic crystals of the sodium salts as a result of the diffusion process. These crystals can serve to confirm the identity of the diffusing acid, as well as provide, by their speed of formation, a rough index of the diffusion rate. The technique may also be used to prepare large crystals of the sodium salts of the acids. The report very briefly discusses results from a study of the diffusion of aliphatic organic acids in sodium hydroxide pellets.

TRAVEL OF SYNTHETIC DETERGENTS WITH PERCOLATING WATER.
Annual rept. no. 3,
Stephen A. Klein, and P. H. McGauhey. Feb 64, 42p SERL-64-2
Grant PHS-WP-207

Descriptors: (*Septic tanks, *Surfactants), Sulfonates, Detergents.

The report discussed to what degree detergents are removed from wastes passing through septic tanks and attendant percolation systems. Detectable concentrations of ABS in ground waters demonstrate that degradation is incomplete. Furthermore, frothing of water obtained from wells in sewage-polluted strata is not an uncommon occurrence. It is therefore important to study the interrelationships of synthetic detergents and septic-tank systems.

STUDY OF PESTICIDES IN SHELLFISH AND ESTUARINE AREAS OF LOUISIANA,
R. J. Hammerstrom, R. T. Russell, R. M. Tyo, E. A. Robertson, Jr., and J. L. Gaines. 1967, 31p
PHS-Pub-999-UIH-2
Prepared in cooperation with the Gulf Coast Shellfish Sanitation Research Center, and Federal Water Pollution Control Administration.

Descriptors: (*Pesticides, *Shellfish), (*Water pollution, Pesticides), (*Louisiana, Water pollution), Fisheries, Estuaries, Seafood, Public health, DDT, Dieldrin, Endrin.

The major interest in this study was concerned with the findings of endrin and dieldrin in the various types of samples analyzed. Special attention was also given to the frequency and levels of concentration at which DDT and its metabolites DDD and DDE were found. The highest levels of concentration of these pesticides are summarized for the entire study for all samples of each type. The results of the laboratory analyses of all oyster, water, and bottom sediment samples collected during the entire study showed that, in general, chlorinated pesticides were either not detected or were found in very low levels. The amounts of the pesticide residues found by the Food and Drug Administration were reported as insignificant from a health standpoint. (Author Modified Abstract)

USE OF CHEMICAL ADDITIVES TO IMPROVE AERATION RATES.
Progress rept. no. 1,
Stefan A. Zieminski. 1965, 43p R-248

Descriptors: (*Aeration, *Mass transfer), (*Dissolving, Aeration), Dissolved gases, Oxygen, Carboxylic acids, Additives, Bubbles.

The mass transfer of oxygen from air bubbles to water is of considerable practical importance in treatment of sewage by bio-oxidation and in many industrial fermentation processes. The cost of this operation is comparatively high because large quantities of air have to be compressed to the pressure of the system and dispersed into small bubbles. To obtain more information on this action it was proposed to conduct a preliminary investigation of the effects of three homologous series of organic compounds on the size of air bubbles, mass transfer coefficient, and on the interfacial areas of air-water dispersions. The series of compounds selected for investigation were the mono- and di-carboxylic acids and aliphatic alcohols. This was done in order to determine the possible effects of the type of the compound and its molecular size. Some tests on carboxylic acids, obtained in our previous work, are also discussed in the report. (Author Modified Abstract)

REPORT ON POLLUTION IN THE LAKE TAHOE BASIN: CALIFORNIA - NEVADA, APPENDIX A. VOLUME 2.
A. W. West, and K. M. Mackenthun. Jul 66, 459p

Prepared in cooperation with Southwest Regional Office, San Francisco, Calif. Proceedings of Conference In the Matter of Pollution of the Interstate Waters of Lake Tahoe and Its Tributaries, held 18-20 Jul 66, at Stateline, Nev.

Descriptors: (*Lake Tahoe, *Water pollution), (*Nevada, Water pollution), (*California, Water pollution).
Identifiers: *Water quality data.

Lake Tahoe, astride the California-Nevada stateline in the Sierra Nevada Mountains, is one of the clearest, deepest freshwater lakes in the world. As the growth of resident and tourist populations alike increases at an accelerated rate, the problems associated with sewage and other waste disposal are magnified and the clarity and beauty of Lake Tahoe waters are threatened by algal nuisances that may arise from the nitrogen and phosphorus contained in these wastes. Likewise, silt from land clearing practices and real estate development is an increasing problem. The report discusses the nutrient and silt problems, the present status of sewage treatment and disposal, the water quality characteristics of lake waters, and the pollution abatement proposals designed to protect and preserve the quality and beauty of the interstate waters of Lake Tahoe. STUDIES ON THE ENVIRONMENT AND EUTROPHICATION OF LAKE MICHIGAN.
Special rept. (Final),
John C. Ayers, and David C. Chandler. 1967, 422p
SR-30
Grant PHS-WP-00311

Descriptors: (*Lake Michigan, *Water pollution), (*Limnology, Lake Michigan), Biological surveys.
Identifiers: *Eutrophication.

The project is a multidisciplinary team approach to the biological, chemical, and sedimentary indications of the eutrophication process in the southern two-thirds of Lake Michigan. It also involved studies of weather- and air mass-modification by the lake and studies of the physical circulation of the lake as pertinent ancillary matters capable of influencing the expressions of eutrophication by lake parameters. Included also, as fundamental background, were studies of the bedrock framework of the lake basin and such additional facets of the geological history of the lake as were possible. GRADE A DRY MILK PRODUCTS. RECOMMENDED SANITATION ORDINANCE AND CODE FOR DRY MILK PRODUCTS USED IN GRADE A PASTEURIZED MILK PRODUCTS.

1959, 51p
Supplement 1 to the Milk Ordinance and Code-1953 Recommendations of the Public Health Service.

Descriptors: (*Food processing, *Milk), (*Food sanitation, Milk), (*Dried foods, Milk), Pasteurizing, Standards, Dairy products.

These sanitation standards for the manufacture of dry milk products intended for use in the commercial preparation of Grade A pasteurized milk products have been developed as a supplement to the Milk Ordinance and Code--1953 Recommendations of the Public Health Service. Like the parent document, this supplement has the approval and endorsement of the U.S. Department of Agriculture and is recommended by the Public Health Service, U.S. Department of Health, Education, and Welfare, for voluntary adoption by States, counties, and municipalities. Modern milk drying techniques have made possible the manufacture of high quality dry milk products suitable for use in the commercial preparation of milk products such as reconstituted milk, reconstituted skim milk, cultured buttermilk, flavored reconstituted dairy drinks, special dietary products containing added milk solids, and cottage cheese. The National Conference on Interstate Milk Shipments requested the Public Health Service to cooperate with representatives of the Conference and the dry milk industry in drafting sanitary standards for the manufacture of Grade A dry milk products. The Service agreed to undertake the development of such standards.

MUNICIPAL WATER FACILITIES. INVENTORY OF JANUARY 1, 1958, ARIZONA. A COOPERATIVE STATE-FEDERAL REPORT.
1958, 11p

Descriptors: (*Arizona, *Water supply), Inventories.

The volume is one of nine which, taken together, comprise an inventory of public water supply facilities in the United States as of January 1, 1958. The listing includes all facilities serving places having a 1950 population of 100 or more which have been reported by the respective State Departments of Health. In a few States, places smaller than this size have been reported, and in one of two others the minimum size has been somewhat greater. The listing is alphabetic by name of place within the State. METEOROLOGICAL SUMMARIES OF IMPORTANCE TO AIR POLLUTION IN WESTERN SAN DIEGO COUNTY,
George C. Holzworth. 31 Dec 57, 95p

Descriptors: (*Air pollution, *California), (*Atmospheric motion, Air pollution), Meteorological data.
Identifiers: *San Diego County (California).

The purpose of the study was to provide summaries of existing information on characteristics of wind, atmospheric stability and cloudiness, and to describe the manner in which such variables may be expected to affect air pollution in San Diego County. From this information general conclusions were made as to the times and areas of relatively good or poor atmospheric dispersion. It is also intended that this report will be useful in understanding some of the meteorological factors in San Diego County's air pollution problem and will be of value in planning future studies.

MATHEMATICAL MODELS FOR WATER QUALITY FOR THE HUDSON-CHAMPLAIN AND METROPOLITAN COASTAL WATER POLLUTION CONTROL PROJECT.
Final rept.
Apr 68, 353p
Contract PH-86-65-125

Descriptors: (*Water pollution, *Mathematical models), (*Hudson River, *Water pollution), (*New York, Water pollution), (*New York Harbor, *Water pollution), (*Stream pollution, Mathematical models), (*New Jersey, Water pollution), Atlantic Ocean, Raritan River.

Water discharges from urban population centers, industries, rural runoff, and storm overflows carry significant quantities of nutrients, organic and inorganic pollution to our waterways. Programs to control water quality invariably require large capital and operating expenditures. Among the specific procedures which have been coasidered for pollution and water quality control are treatment plant construction, low flow augmentation, transportation of wastes and dispersion in oceans. It is the purpose of the report to present the mathematical models which will permit an assessment of water quality conditions and the improvements associated with various control procedures.

FATE OF SYNTHETIC DETERGENTS IN SOIL AND GROUND WATER.
Civil engineering studies, 1 Sep 59-31 Jan 65 (Final),
Shankha K. Banerji, and Ben B. Ewing. Nov 65, 117p Sanitary Engineering Ser-33
Grant PHS-WP-00018

Descriptors: (*Water pollution, *Surfactants), (*Detergents, Water pollution), Soil properties.
Identifiers: *Path of pollutants.

The objective of the study was to evaluate the relative importance of several factors on the retarded movement of ABS in a soil system receiving a waste containing detergent and to evaluate the fate of the phosphate builders in the soil system. The role of the biological slime which may develop in the top layer of soil and which may provide additional surface area for increased adsorption of ABS and phosphates was investigated. Also, in this zone, the slow percolation rates may allow enough time for biodegradation of both the ABS and phosphates. Deeper soil layers may retain the detergent components by adsorption. Environmental factors affecting this retention include the type of soil, concentration of solute, structure of solute, pH and temperature. (Author)

CHEMICAL INTERACTIONS OF DISSOLVED SILICA WITH IRON (II) AND (III),
John E. Schenk, and Walter J. Weber, Jr. 1968, 13p
Grant FWPCA-WP-00674
Presented at Annual Conference, Atlantic City, N.J. 8 Jun 67. Pub. in Jnl. American Water Works Association, v60 n2 p199-212 Feb 68.

Descriptors: (*Water chemistry, *Silicon dioxide), (*Iron inorganic compounds, *Water chemistry), Oxidation, Hydrolysis.

Dissolved silica is a major constituent of most natural waters; yet its significance in water quality transformations has remained largely undefined. It is thus important to develop systematic information regarding the effects of silica on the chemical and biologic characteristics of natural waters. In defining the role of dissolved silica in water quality transformations, it is essential first to obtain sufficient information regarding the chemical nature of the various species of silica which may exist under different conditions in dilute aqueous solution. This article describes some of the results of an investigation of several of the reactions of dissolved silica in dilute solution. (Author Modified Abstract)

REPORT OF A STUDY SPONSORED BY THE FEDERAL HOUSING ADMINISTRATION TO DEVELOP PRACTICAL DESIGN CRITERIA FOR SEEPAGE PITS AS A METHOD FOR DISPOSAL OF SEPTIC TANK EFFLUENT,
Thomas W. Bendixen, Richard E. Thomas, and James B. Coulter. 1 May 63, 252p

Descriptors: (*Septic tanks, *Seepage), Design criteria.

The seepage pit is a common method of transmitting septic tank effluent into the soil. The most extensive application of the method has been in the western United States; however, pits have been used in significant numbers but on a spotty basis in many states throughout the nation. The study is devoted entirely to the problem of introducing septic tank effluent into the soil. The report determines under what conditions seepage pits are a satisfactory means of disposing of septic tank effluent at individual households, devises practical tests for judging the suitability of soils for seepage pits, and identifies design, construction, and administrative control practices desirable for good pit performance.

Report on Management of Reusable Water in Utah.

Descriptors: (*Great Salt Lake, *Water reclamation), (*Utah, *Water resources), Management planning, Public health, Irrigation, Fisheries.

Problems involving legal ownership and the multipurpose use of available water on the eastern shores of the Great Salt Lake have been in existence for more than a century. These problems are currently increasing proportionately with the recent rapid increase in the human population in this area and as a result are becoming more controversial and acute. In an attempt to assist in improving multipurpose use and management of the reusable water in this area, this cooperative research program was established. The objectives of the present study were to develop and field test physical facilities techniques and management practices for multipurpose use of reusable water on the eastern shores of the Great Salt Lake which will provide the greatest mutual benefits to public health, agriculture, fish and wildlife and other interests concerned.

GROUND WATER POLLUTION IN THE SOUTH PLATTE RIVER VALLEY BETWEEN DENVER AND BRIGHTON, COLORADO.
Dec 65, 71p PR-4

Descriptors: (*Platte River, *Water pollution), (*Colorado, Water pollution), (*Ground water, Water pollution).
Identifiers: *Adams County (Colorado), *Water quality data.

The investigation of ground-water conditions in the South Platte River Valley between Denver and Brighton in southwest Adams County was undertaken as a part of the water pollution study of the Denver metropolitan area currently being conducted by the South Platte River Basin Project. Ground water is used extensively in the area for public, domestic, industrial and irrigation supplies. The principal source of large ground-water supplies is the shallow valley-fill deposits which are very susceptible to contamination. The rapidly expanding urban and industrial growth of the area has resulted in continued development of water supplies from ground-water sources. The purpose of the ground-water study was to determine sources and extent of pollution in the water-bearing formations in the area. In assessing these conditions the geology and water-bearing characteristics of the aquifers were considered. (Author)

BOUNDARY FLOW IN LABORATROY PERMEAMETERS USED TO STIMULATE RECHARGE BY CYCLIC WATER SPREADING,
B. K. Worcester, T. H. McIntosh, and L. G. Wilson. 19 Jan 68, 5p Journal Paper-1269
Grant FWPCA-WP-00672
Revision of report dated 25 Sep 67. Pub. in Water Resources Research, v4 n3 p591-595 Jun 68.

Descriptors: (*Ground water recharge, *Hydraulic conductivity), Soil properties.

The contribution of boundary flow to the hydraulic conductivity values obtained from laboratory permeameters employed in cyclic flood-dry infiltration studies was evaluated. Hydraulic conductivity in the boundary zone was less than that of the inner matrix for a 2-mm sand. Conversely, the flow rate was greatest in the boundary zone for the finer textured sandy loam soils. The divergence between the hydraulic conductivity of the inner zone and the boundary zone was greatest during the first flooding period. For both matrix cycles, although of different magnitude, tended to be similar and parallel. A laboratory permeameter design is presented to facilitate partitioning the relative contributions of flow in the boundary and inner zones on the hydraulic conductivity values of soils. (Author)

AEROBIC HETROTROPHIC BACTERIAL POPULATIONS OF SEWAGE AND ACTIVATED SLUDGE. II. METHOD OF CHARACTERIZATION OF ACTIVATED SLUDGE BACTERIA,
T. B. S. Prakasam, and Norman C. Dondero. 7 Apr 67, 7p
Grant FWPCA-WP-00645-01
Pub. in Applied Microbiology, v15 n5 p1122-1127 Sep 67.

Descriptors: (*Sludge, *Bacteria), Aerobic processes, Activated sludge process, Food chains, Nutrition, Metabolism, Microorganisms, Sludge digestion.
Identifiers: *Heterotrophy.

The replica-plating technique and Lochhead's nutritional method were combined in exploratory experiments to test their feasibility as useful means for characterizing the aerobic heterotrophic flora of activated sludge and to minimize the burdensome process of isolation, purification, and testing of isolates. In the test run, the method was about 86% reliable at the 0.05 level of significance. About 40% of the total number of bacteria able to grow on an aqueous extract of activated sludge did not grow on media containing glucose, amino acids, growth factors, and inorganic salts. The requirement for activated sludge extract suggested the existence of a requirement for unidentified nutrients contained in the activated sludge extract. (Author)

STUDIES OF SEWAGE PURIFICATION. IX. TOTAL PURIFICATION, OXIDATION, ADSORPTION AND SYNTHESIS OF NUTRIENT SUBSTRATES BY ACTIVATED SLUDGE.
C. C. Ruchhoft, C. T. Butterfield, P. D. McNamee, and Elsie Wattie. 1965, 38p PHS-Pub-208

Descriptors: (*Activated sludge process, *Biochemical oxygen demand), (*Sewage treatment, Activated sludge process), Oxidation, Nutrients.

It is the purpose of the paper to present data on the total removal of biochemical oxygen demand (B.O.D.) of nutrient substrates by activated sludge and to show what portion of the total removal may be accounted for by oxidation. The demonstration of the portion of the total B.O.D. removal that is the result of oxidation has not been made before.

SOUTH PLATTE RIVER BASIN IRRIGATION OF VEGETABLES WITH SEWAGE-POLLUTED WATER.
Nov 67, 76p PR-12

Descriptors: (*Irrigation, *Water quality), (*Public health, Irrigation), (*Platte River Basin, *Water pollution), (*Colorado, Water pollution), Vegetables.

The possible health hazard resulting from irrigation with sewage-polluted water of vegetables normally consumed raw has long concerned public health officials. Conflicting opinions have evolved on the degree of danger caused by this practice. Commonly accepted objectives for sewage irrigation practices have not been developed, nor have there been established generally approved standards for the quality of irrigation water. In the South Platte River Basin downstream from and north of Denver to Brighton, Colorado, the largest use of water is for agriculture. In the area immediately north of Denver many varieties of 'salad vegetables' were raised. At the time of this study these vegetables were irrigated with polluted water diverted via four main supply ditches from the South Platte River just below entry of the Denver Northside sewage treatment plant effluent. Other inadequately treated municipal and industrial effluents contributed to the overall pollution in this vicinity. During 1963-64 a field sampling and laboratory analysis program was conducted on vegetables, the soils in which they were grown, and the waters with which they were irrigated. Samples of vegetables, soils, and waters were analyzed for three bacterial indices of pollution.

WATER SUPPLY AND WATER QUALITY CONTROL STUDY PAPILLION CREEK BASIN, NEBRASKA. STUDY OF THE NEEDS AND VALUE OF STORAGE FOR MUNICIPAL AND INDUSTRIAL WATER SUPPLY AND WATER QUALITY CONTROL.
Oct 66, 34p

Descriptors: (*Papillion Creek Basin, *Reservoirs), (*Nebraska, *Water resources).
Identifiers: *Washington County (Nebraska), *Douglas County (Nebraska), *Sarpy County (Nebraska).

The purpose of this study is to determine the need for and value of storage for municipal and industrial water supply and water supply and water quality control in the Papillion Creek Basin. Papillion Creek and its tributaries drain an area of 394 square miles in Washington, Douglas and Sarpy Counties, located in eastern Nebraska. The study covers a 100 year period, 1970 to 2070, as requested by the Corps of Engineers. (Author Modified Abstract)

WATER RESOURCES STUDY WHITE RIVER BASIN (PINE RIDGE UNIT) SOUTH DAKOTA.

May 63, 42p
Report on Study of Potential Needs and Value of Water for Municipal, Industrial, and Quality Control Purposes.

Descriptors: (*White River Basin, *Reservoirs), (*South Dakota, *Water resources), Slim Butte Reservoir.

The report is concerned with the need for and value of storage in the proposed Slim Butte Reservoir to satisfy the 50- and 100-year prospective needs for municipal and industrial water supply and water quality control in the White River Basin. Special consideration has been given to Dawes County, Nebraska, and Shannon County, South Dakota, since the largest demands for water from the proposed projects are expected to occur in these counties. SIGNIFICANCE OF THE COLIFORM GROUP OF BACTERIA AND OF OTHER BACTERIA AS A CRITERION OF THE SANITARY QUALITY OF WATER.
Memoranudm rept.,
C. T. Butterfield. 1 Feb 45, 12p

Descriptors: (*Coliform bacteria, *Water pollution), (*Aquatic microbiology, Water pollution), Indicator species, Water quality, Escherichia coli, Infections, Enlerobacteriaceal, Standards, Criteria, Public health.

The qualifications of the coliform group to serve as criteria of water pollution may be summarized as follows: (1) Bacteria of the coliform group are invarible found in large numbers in the feces of man and certain animals. (2) Analysis of the records for water quality as based on the coliform group, and for intestinal diseases in communities with public water supplies indicates that the coliform group has served effectively as an indicator of fecal pollution. (3) All component members of the coliform group of bacteria tend to die out in waters at approximately the same rates regardless of whether the exposure is to natural or artificial purification processes. (4) A method (primary planting in lactose broth with confirmation in Brilliant Greer Lactose Bile broth) is available for the determination of the coliform group.

LAKE ERIE ENVIRONMENTAL SUMMARY, 1963-1964.
May 68, 177p

Descriptors: (*Lake Erie, *Water pollution), Sediments, Water chemistry, Aquatic biology.

The Federal Water Pollution Control Administration and its antecedent, the Division of Water Supply and Pollution Control of the U. S. Public Health Service, have gathered a great amount of data on the physical, chemical, and biological characteristics of Lake Erie. Various reports by those agencies and others have been based on the gathered data. This report is an attempt to summarize the information gathered in the years 1963 through 1965. The purposes are (1) to provide a document for validating previous reports on the pollution problems in Lake Erie and (2) to provide a base for comparison with future lake surveillance data. EVALUATION OF AIR POLLUTION IN THE STATE OF WASHINGTON.
Cooperative survey rept. 1 Jul-30 Nov 56,
E. R. Hendrickson, D. M. Keagy, and R. L. Stockman. Dec 56, 170p
Prepared in cooperation with Department of Health, Education, and Welfare.

Descriptors: (*Air pollution, *Washington (State)).

The objective of the study was to investigate the status of air pollution in Washington and to supply, insofar as possible, data from which the need and scope of future air pollution program activity on a state or local basis could be determined. The scope of the study was to assess the present and potential state problem and to delineate specific problem areas, present and future, through a study of population distribution and trends, geography and topography, meteorology and climatology, and existing and potential sources of pollution. In addition, a determination was made of available resources in the State for research and investigation in air pollution problems. (Author Modified Abstract)

CHLOROPHYLL CONCENTRATION AND OXYGEN PRODUCTION IN A SEWAGE OXIDATION POND. PART III. IMPROVEMENT OF OXIDATION POND EFFLUENTS BY ORGANISMS.
Final rept.,
Charles E. Hazel, and John W. DeWitt. 1 Jan 64, 83p
PHS-WP-00020-04

Descriptors: (*Lagoons (Ponds), *Phytoplankton), (*Sewage treatment, Lagoons (Ponds)), Chlorophylls, Oxygen.
Identifiers: *Aeration ponds.

The main objectives of the study reported were to gain fundamental knowledge of the dynamics of the populations of phytoplankton and of some of the principal environmental influences on the dynamics of these populations, and to determine primary production in a sewage oxidation pond. Preliminary measurements were made of short-term changes in phytoplankton concentrations at various depths in the pond and at different times of day. These short-term changes where then considered in designing a comprehensive phytoplankton sampling program to meet the overall objectives of the project. Along with samples collected to estimate the size of the populations of phytoplankton, simultaneous measurements were frequently made of solar radiation, the standing crop of Daphnia magna, ash-free dry weight of suspended matter, gross oxygen production, and community respiration. ACTIVATED SLUDGE FROM COMMON FOODS FOR RADIOACTIVE WASTE TREATMENT (LABORATORY STUDIES),
C. C. Ruchhoft, Francis I. Norris, and Lloyd R. Setter. 8 Sep 50, 35p
Presented at National Meeting of the American Chemical Society, (118th), Chicago, Ill., 3-8 Sep 50.

Descriptors: (*Activated sludge process, *Nutrients).

The common purpose of the activated sludge process is to remove organic material from suspension and solution. As applied to the treatment of radioactive waste the purpose is to remove inorganic isotopes from very dilute waste water solutions. Laboratory studies in nine-liter bottles on the development and control of activated sludge fed with common foods were made. One of the objectives of these studies was the control of a biological process having adsorptive properties which may be used for removing radioactive wastes from liquors normally deficient or devoid of organic food for zoogleal organisms.

SURVEY OF LITERATURE RELATING TO INFANT METHEMOGLOBINEMIA DUE TO NITRATE CONTAMINATED WATER,
Graham, Walton. Feb 51, 21p

Descriptors: (*Reviews, Methemoglobinemia), (*Public health, Water pollution), (*Methemoglobinemia, Water pollution), (*Water pollution, *Inorganic nitrites), Blood diseases, Toxic diseases, Potable water, Water supply, Infants, Inorganic nitrates.
Identifiers: *Water pollution effects (Humans).

Methemoglobinemia is due to the presence of methemoglobin in the blood. It may result from the reaction of any one of several oxidizing agents with the hemoglobin normally present in the blood. Unlike the oxygen in hemoglobin, that in methemoglobin is so firmly bound that the methemoglobin cannot function as an oxygen carrier by alternate oxygenation and deoxygenation. Thus, the result may be anoxemia with serious consequence or even death. Although methemoglobinemia may result from congenital heart diseases, or from the ingestion, inhalation, or absorption, also from the medicinal administration, of any one of several drugs or chemicals, an important cause of cases in infants is the ingestion of water high in nitrate. This review of the literature is concerned with the latter cause.

A PILOT STUDY OF AIR POLLUTION IN LYNCHBURG, VIRGINIA, FEBRUARY 9-15, 1961.

15 Feb 61, 26p
Prepared in cooperation with Public Health Service, Lynchburg, Va.

Descriptors: (*Virginia, *Air pollution)..
Identifiers: *Air quality data, *Lynchburg (Virginia).

Lynchburg is located in the deep, narrow James River Valley at the foothills of the Blue Ridge Mountains in Central Virginia. Since 1945, there have been complaints about smoke, odors, and smog in Lynchburg, Virginia. This was climaxed by an incident of paint blackening on a group of houses in 1958. Following the appraisal of the problem it seemed advisable to carry out a pilot study to obtain initial data on the general air pollution levels in Lynchburg. The study was planned to provide intensive air pollution sampling for seven days, February 9-15, including one weekend and one all-night sampling period.

THE BEET SUGAR INDUSTRY--THE WATER POLLUTION PROBLEM AND STATUS OF WASTE ABATEMENT AND TREATMENT.

Jun 67, 195p PR-8

Descriptors: (*Platte River Basin, *Water pollution), (*Food processing, Water pollution), (*Industrial waste treatment, Food processing), Industrial wastes.
Identifiers: *Sugar beet processing, *Water pollution control.

Primary attention is focused upon the beet sugar industry in the South Platte River Basin. Beet sugar wastes are the largest source of pollution within the area. Ten sugar factories are dispersed throughout the region and affect water quality over 300 miles of Basin streams. This report comprises five major parts. Section 1 consists of introduction and background to the problem, and description of process operations. Section 2 gives the results of industrial surveys and status evaluation on each of the ten factories in the Basin. Section 3 discusses total factory waste loads before and after treatment. Section 4 describes the bacteriological aspects of sugar beet waste pollution across the country. Section 5 offers a comprehensive review and evaluation of waste abatement and treatment throughout the industry both in the U.S. and abroad. (Author)

THE USE OF MICROSCOPIC ORGANISMS AS ECOLOGICAL INDICATORS AND METHODS OF SAMPLING AND MANIPULATION.
Memorandum rept.,
James B. Lackey. 21 Feb 45, 7p

Descriptors: (*Indicator species, *Water pollution), (*Aquatic microbiology, *Water quality), Ecology, Sampling.

The microscopic flora and fauna exclusive of bacteria, of natural waters, prepared waters from water purification plants, and raw and treated sewage, offer a variety of information relative to those waters. The organisms frequently indicate the hardness or softness of the waters involved; the nature of the acidity, if acid; the region from which the water is derived; the degree of fertilization of the water; the source of tastes and odors; the degree of effectiveness of purification and filtration; the condition of a sewage treatment plant; and sometimes what specific trade wastes are present. Pollution can be classified. The report briefly reviews the use of such indicator species.

DEVELOPMENT OF TECHNIQUES FOR MULTI-PURPOSE MANAGEMENT OF REUSABLE WATER BEFORE IT ENTERS THE GREAT SALT LAK[illegible].
Annual rept. no. 3, 1 Dec 63-30 Nov 64,
Don M. Rees, Frank D. Arnold, Dean M. Anderson, and Glen C. Collett. Mar 65, 145p
Grant FWPCA-WP-00027-03

Descriptors: (*Reservoirs, *Utah), (*Great Salt Lake, *Water resources), Management.

An investigation ha[illegible] been in operation to determine the effect of the use of water which eventually flows into the Great Salt Lake upon mosquito production, waterfowl propagation and management, agriculture, recreation, and other programs which are connected with the use of this water. The project is expected to provide demonstration areas that will show how certain kinds of water management practices can: minimize the production of pest and disease-bearing mosquitoes, increase crop yields, provide improved conditions for wildlife production and management, and improve beneficial uses of the land and water in the area.

EUTROPHICATION OF SURFACE WATERS - LAKE TAHOE: INDIAN CREEK RESERVOIR.
Progress rept. no. 1.

May 70, 147p

Descriptors: (*Lake Tahoe, *Limnology), Nutrients, Indian Creek Reservoirs, Sewage, Waste disposal.
Identifiers: *Eutrophication, Sewage treatment effluent, Liquid waste disposal.

The report covers the geographical, geological, and hydrological character of the Indian Creek Reservoir area; the general limnological aspects of the reservoir; and the nature and findings of physical, chemical, and biological analyses of the reservoir water. The study relates these characteristics of the reservoir water to the nutrient concentrations and biostimulatory characteristics of the influent waste water, and evaluates the relative contribution of biostimulants in the treated effluent and in the underlying soil and sediment exchange.

EVALUATION OF THE MELT-ZIT HIGH-TEMPERATURE INCINERATOR. OPERATION TEST REPORT, AUGUST, 1968.

1969, 115p
Grant PHS-UI-00076
Includes addendum.

Descriptors: (*Waste disposal, *Incinerators).
Identifiers: *Solid waste disposal.

Incineration is the basic method for the reduction of municipal refuse to a minimum volume for disposal in landfilling. The Melt-Zit principle is unique in the incinerator art. The non-combustible fractions of the refuse are melted in a bed of high-temperature coke, and drained from the furnace as molten slag and iron. Organic matter in the residue is thereby automatically prevented and complete sterility is achieved. The residue has a high density. The report describes the testing and economics of this system.

WEST FORK RIVER INVESTIGATION. MONETARY BENEFITS TO POLLUTION ABATEMENT BY FLOW REGULATION FROM WEST FORK RESERVOIR, BROWNSVILLE, WEST VIRGINIA,
M. LeBosquet, Jr. Dec 47, 31p

Descriptors: (*West Fork River, *Water pollution), (*West Virginia, Water pollution), Stream flow, Flow rate.

The present investigation has been confined largely to the question of pollution abatement, leaving to the U. S. Engineer Office any benefits to West Fork River water supplies, both municipal and industrial, resulting from increased flow in West Fork River. However, benefits to public and industrial water supplies in the Monongahela River due to improved quality resulting from the increased flow, have been included in the present investigation. Studies of the West Fork River Basin were conducted in 1940 at the time of the Ohio River Pollution Survey, and the report on this work is available in House Document 266, 78th Congress, 1st Session, page 355, Monongahela River Basin. PRELIMINARY INVESTIGATION OF KRAFT MILL WASTES, CROSSETT PAPER MILLS, CROSSETT, ARKANSAS AS RELATED TO OUACHITA RIVER POLLUTION IN VICINITY OF ARKANSAS-LOUISIANA STATE LINE,
Hayse H. Black. Jun 49, 31p

Descriptors: (*Ouachita River, *Water pollution), (*Paper industry, Water pollution), (*Arkansas, Water pollution), Spent liquors (Pulping), Sulfates.
Identifiers: *Crossett (Arkansas).

Major destruction of fish has been reported in Ouachita River just below the Arkansas-Louisiana state line, on numerous occasions, during the past several years. These fish kills have been attributed to pollution resulting from promiscuous discharge of process wastes from the sulfate pulp mill located at Crossett, Arkansas. This investigation was requested by the U. S. Public Health Service, Washington Office, in a memorandum dated February 11, 1949. The purpose of this meeting was to discuss process wastes created by operations of Crossett Paper Mills as they relate to pollution of Ouachita River. (Author Modified Abstract)

AIR POLLUTION AND HEALTH: GENERAL DESCRIPTION OF A STUDY IN NASHVILLE, TENNESSEE,
Louis D. Zeidberg, Jean J. Schueneman, Paul A. Humphrey, and Richard A. Prindle. 1960, 35p
Prepared in cooperation with Vanderbilt Univ., Nashville, Tenn. and Public Health Service, Washington, D. C.

Descriptors: (*Public health, *Air pollution), (*Tennessee, Air pollution).
Identifiers: *Air pollution effects (Humans), *Nashville (Tennessee).

The Public Health Service Air Pollution Medical and Air Pollution Engineering Programs have conducted a joint study of air pollution in Nashville, Tennessee, with the School of Medicine of Vanderbilt University. Objectives of the study were to investigate possible relationships between air pollution and the health of people and to obtain information on a number of aspects of the engineering and meteorological aspects of air pollution. The four phases of the medical study are described. They include a morbidity survey, a mortality survey, a clinical study of individuals with known chronic cardiorespiratory disease, and an anthracosis study of autopsied individuals. The extensive aerometric studies are described in terms of objectives and equipment and methods used. General descriptive information concerning the study area is presented. (Author)

SIMULATION OF THE TIME-DEPENDENT PERFORMANCE OF THE ACTIVATED SLUDGE PROCESS USING THE DIGITAL COMPUTER,
Robert Smith, and Richard G. Eilers. Oct 70, 72p

Descriptors: (*Activated sludge process, Mathematical models), (*Sewage treatment, Activated sludge process), Automation, Computerized simulation, Computer programs.

One challenging and unsolved problem associated with wastewater treatment technology is the development of a mathematical model capable of simulating the time-dependent performance of the activated sludge process, especially a representation of the time-dependent characteristics of the final settler. The goal of automatic control is to produce an effluent which is of better average quality than that which can be achieved without control and to minimize the variation of effluent quality with time.

BLACK-WATER IMPOUNDMENT INVESTIGATIONS,
Richard W. Warner, R. Kent Ballentine, and Lowell E. Keup. 1969, 103p

Descriptors: (*Northeast Cape Fear River, *Reservoirs), (*North Carolina, Water pollution), (*Water pollution, Northeast Cape Fear River), Lake Wilson.

In late July and early August, 1968, a study was conducted to predict the quality of Northeast Cape Fear River waters to be impounded in Kornegay Reservoir, Duplin County, North Carolina. This study was requested by the Corps of Engineers because the highly colored river water will inundate rich organic soils and vegetation that may leach undesirable materials and affect water quality adversely for fish propagation, wildlife, flow augmentation, water supply, and recreation. To assess the magnitude of the problem and to predict the effects of removal of vegetation and soils from the reservoir site, chemical and biological conditions of the Northeast Cape Fear River were compared with those of two small reservoirs with highly colored influents near Wilson, N. C. (Author)

WATER QUALITY CONTROL STUDY, BIG SIOUX RIVER BASIN, IOWA, MINNESOTA AND SOUTH DAKOTA. STUDY OF THE NEEDS AND VALUE OF STORAGE FOR WATER QUALITY CONTROL.
Sep 69, 45p
Errata sheet inserted.

Descriptors: (*Big Sioux River Basin, *Water pollution), (*Iowa, Water pollution), (*Minnesota, Water pollution), (*South Dakota, Water pollution).

The purpose of the study was to determine the present and future needs and value of storage for streamflow regulation for quality control in the Big Sioux River Basin, a tributary of the Missouri River. The study period covered requirements for streamflow regulation for quality control from the present to 2070. The Big Sioux River Basin includes parts of the following counties: Day, Roberts, Grant, Clark, Codington, Deuel, Hamlin, Kingsbury, Brookings, Lake, Moody, Minnehaha, Union and Lincoln in South Dakota; Lincoln, Pipestone, Murray, Rock and Nobles in Minnesota; and Lyon, Osceola, Sioux, and Plymouth in Iowa. PROBLEMS AND MANAGEMENT OF WATER QUALITY IN HILLSBOROUGH BAY, FLORIDA.
Dec 69, 136p

Descriptors: (*Florida, Water pollution), (*Odors, Water pollution), (*Hillsborough Bay, *Water pollution).
Identifiers: *Tampa (Florida), *Water quality data.

The residents of the city of Tampa have reported obnoxious odors along the western shore of Hillsborough Bay for many years. This odor had historically been associated with excessive growths of attached algae and general poor water quality attributable to waste discharges. At the request of local authorities and the Florida State Board of Health, FWPCA initiated extensive field and laboratory investigations in Hillsborough Bay in June 1967. The objectives of these studies were: to identify and quantify key sources of waste in Hillsborough Bay and to determine their effect on water use; to determine the cause or causes of noxious odors in Hillsborough Bay and; to recommend means of modifying conditions in Hillsborough Bay to eliminate the causes of obnoxious odors and make possible other desirable uses.

DELAWARE ESTUARY COMPREHENSIVE STUDY. WATER USE ADVISORY COMMITTEE GUIDE.

Dec 64, 57p

Descriptors: (*Delaware Estuary, *Water resources), Manuals.

The Delaware Estuary Comprehensive Study requests that the sub-committees of the Water Use Advisory Committee undertake as their initial task, the preparation of the first part of a report on the present and future use and needs of the or-

ganizations represented, relative to the waters in the estuary. The guide was prepared to simplify these tasks for the sub-committee members, and to assist members in eliciting responses from the organizations they represent. Part I of this guide briefly explains (1) the DECS and (2) the current quality and uses of the waters of the Delaware Estuary. Part II deals with ASSIGNMENTS. Part III contains certain reference materials that should be useful to all members of the four sub-committees.

AN APPRAISAL OF AIR POLLUTION IN SPARTANBURG, SOUTH CAROLINA,
G. B. Welsh. Apr 62, 50p
Prepared in cooperation with the City of Spartanburg, S.C., and the South Carolina State Board of Health.

Descriptors: (*South Carolina, *Air pollution).
Identifiers: *Spartanburg (South Carolina), *Air quality data.

At the request of the City of Spartanburg and the South Carolina State Board of Health, an appraisal of factors relating to the air pollution problem in Spartanburg, South Carolina, was undertaken by the Division of Air Pollution of the Public Health Service. The purpose of this appraisal was to determine the general nature and extent of the air pollution problem and to develop general recommendations for activities to meet present and future air pollution problems in Spartanburg. This report is based on data obtained from existing information, brief inspection visits, and a seven-day continuous air sampling study. (Author Modified Abstract)

TURBULENCE IN ORTHOKINETIC FLOCCULATION,
Yerachmiel Argaman, and Warren J. Kaufman. Jul 68, 170p SERL-68-5
Grant FWPCA-WP-00658

Descriptors: (*Flocculating, *Hydraulics), Chemical reactors, Mixing, Turbulent flow, Particle size, Numerical analysis.

The study shows the relationship between the rate of orthokinetic flocculation and the hydrodynamic parameters describing the internal structure of turbulence in stirred reactors. Specifically, the study derives a theoretical expression for the frequency of collisions between particles suspended in a turbulent fluid, in which the particles are larger than the smallest scale of the turbulence; develops a working formula expressing the degree of flocculation obtained in a continuous flow system as a function of the hydrodynamic parameters and physical properties of the system; verifies experimentally the proposed theory through the simultaneous determination of flocculation performance and hydrodynamic characteristics; and develops design criteria and operational considerations for full scale treatment plants.

EDDY DIFFUSIVITY AND THE FOUR-THIRDS LAW IN NEAR-SHORE (COASTAL WATERS),
James E. Foxworthy. 1968, 78p 68-1
Grant FWPCA-WP-00931-03

Descriptors: (*Plumes, *Turbulent diffusion), (*Outfall sewers, Plumes), (*Oceans, Turbulent diffusion), Mathematical models, Coasts.
Identifiers: *Ocean waste disposal, Liquid waste disposal.

During the period from 1963 through 1968 a series of instaneous and continuous release dye experiments were conducted in the near-shore coastal waters off southern California. The results of these experiments have been interpreted in terms of two- and three-dimensional apparent coefficients of eddy diffusivity. During the course of this investigation, little evidence was found to substantiate the applicability of the so-called four-thirds law relating the instantaneous apparent diffusivity coefficients and the approximate eddy scale. The findings cast doubt on the direct applicability of the four-thirds law in the design of submarine waste outfalls or in predicting the behavior of other low density surface fields. HARVESTING OF ALGAE BY FROTH FLOTATION.
Final rept.
9 Mar 64, 43p
Contract PH-86-63-75

Descriptors: (*Algae, *Harvesting), (*Flotation, Algae), (*Sewage treatment, Algae).
Identifiers: Chlorella pyrenoidosa, *Froth flotation, *Nutrient removal.

Efforts made during the current year have been concerned mainly with the determination and quantification of the factors that affect the economics of the froth flotation harvesting process. Three criteria can be used in evaluating the process: Percentage clarification of feed suspensions; Absolute amounts of harvest per unit of raw materials required; and Absolute amounts of harvest obtained per unit time. It was suggested that, for both unialgal cultures and lagooned sewage, froth flotation processing can be evaluated best in terms of actual amounts of material removed from or remaining in feed suspensions. A COMPREHENSIVE WATER POLLUTION CONTROL PROGRAM FOR THE MISSISSIPPI-DES MOINES-SKUNK RIVERS BASIN.
Water pollution series.

1953, 56P PHS-Pub-314, PHS-WPS-55
Prepared in cooperation with the State Water Pollution Control Agencies of Illinois, Iowa, Minnesota, and Missouri.

Descriptors: (*Mississippi River Basin, *Water pollution), (*Des Moines River Basin, *Water pollution), (*Skunk River Basin, *Water pollution), (*Iowa, Water pollution), (*Illinois, Water pollution), (*Minnesota, Water pollution), (*Missouri, Water pollution).

The report sets forth the water pollution control program being followed by the respective States in the Mississippi-Des Moines-Skunk Rivers Basin. This program, which is based on data available as of January 1, 1953, was developed after a thorough consideration of the existing and potential uses of the water resources in the basin; the pollution entering the streams and the resulting damages; the benefits which may result from pollution prevention and abatement; and the prevention measures now in effect as well as those which are needed.

ENVIRONMENTAL HEALTH PLANNING GUIDE. AIR POLLUTION. SEWERAGE, WATER, HOUSING. REFUSE.

1973, 65p PHS-Pub-823

Descriptors: (*Public health, Pollution), (*Pollution, *Urban planning), Air pollution, Water pollution, Sewage, Waste disposal, Residential buildings, Abatement.

Today the explosive population growth and the continued concentration of people, production and services in metropolitan areas are making the environmental health problems still more complex and difficult. Polluted water and air, open refuse dumps, substandard housing and overflowing septic tanks are now among the most urgent community problems. There are no standard answers to a community's problems. The solutions will vary depending on local conditions. This guide presents a systematic approach to a community's environmental health problems by describing the steps and procedures that have been found helpful in determining a community's needs. The guide emphasizes the evaluation of health-related utilities and services which readily lend themselves to long-range planning, and deals primarily with water, sewerage, refuse, air pollution and housing programs.

PLYWOOD PLANT GLUE WASTES DISPOSAL.
Final rept.,
Danforth G. Bodien. Jan 69, 89p FR-5

Descriptors: (*Glue, *Industrial waste treatment), (*Plywood, Industrial waste treatment), Phenols.
Identifiers: *Water pollution control, *Wood processing industry, Biological industrial waste treatment.

Plywood plants generate wastewater from the cleanup of glue mixing equipment and glue spreaders. Some of the wastes are toxic to fish and all are high in pollutional strength. Treatment of these glue wastes varies from plant to plant, but generally consists only of solids separation or the removal of suspended matter. Biological treatment investigations showed that BOD removals of 90+ percent can be attained where protein and urea glues are involved; however, this process proved unworkable for the phenolic glues and the process of incineration was shown to have good potential. Wastewater reuse offers the best waste disposal answer for the phenolic glues and possibly also for the protein and urea glues. (Author Modified Abstract)

Public Health Service, Washington, D.C. Div. of Environmental Engineering and Food Protection.
NATIONAL REGISTER OF SHELLFISH PRODUCTION AREAS.
Leroy S. Houser, and Frank J. Silva. 1966, 12p PHS-Pub-1500

Descriptors: (*Shellfish, *Fishing grounds), Water pollution.

The National Shellfish Sanitation Program is a cooperative State-Federal-Industry effort designed to assure to the consuming public the safety of shellfish (oysters, clams, and mussels) shipped in interstate commerce, and provide for continuing use of a valuable natural resource. The Program is concerned with the sanitary aspects of shellfish production, harvesting, processing, and distribution. The report presents data on shellfish production areas. The data covers the following points by State and by Region; number, size and classification of areas; location of areas by interstate and intrastate waters, and by active and inactive areas.

A COMPREHENSIVE PROGRAM FOR CONTROL OF WATER POLLUTION IN THE MISSOURI DRAINAGE BASIN.
Jul 53, 132p PHS-Pub-317, PHS-WPS-56
A Cooperative State-Federal Report on Water Pollution.

Descriptors: (*Missouri River Watershed, *Water pollution), Industrial wastes, Sewage, Tables (Data).

The report discusses the ways our water resources are used, the pollution going into our water resources and the resulting damages, the benefits which may result from pollution prevention and abatement, the pollution prevention measures now in effect, and the pollution control measures required. Fourteen sub basins of the Missouri River drainage area are reviewed.

UNIVERSAL FACTORS IN AEROBIC BIOLOGICAL PURIFICATION,
M. B. Ettinger. 1957, 16p
Presented at the Annual Meeting of the Central States Sewage and Industrial Wastes Association (30th), June 1957.

Descriptors: (*Sream pollution, *Limnology), (*Aquatic microbiology, Limnology), Nutrients.
Identifiers: *Self purification.

The recurrent pattern of oxidative food usage by microorganisms and oxidative destruction of cell substance in unfed cultures has been described, and it has been noted that these phenomena are essentially similar in natural stream purification and in activated sludge and trickling filter systems. The universal effect of nutritional deficiencies on growth characteristics has been described and the effect of nutritional deficiencies on growth and oxidation analyzed. The sewage treatment plant has been noted to undergo a daily cycle with excess oxidation capacity at night because of reduced load. Algal photosynthesis has been analyzed in terms of its effect on oxidative purification processes. (Author)

PRELIMINARY REPORTS OF PROGRESS - LABORATORY STUDIES, WATER DECONTAMINATION. III. STUDIES ON CE144, Y91, AND I131,
Conrad P. Straub, T. W. Brockett, Jr., and Robert Stepp. 3 May 51, 14p

Descriptors: (*Water treatment, *Radioactive contaminants), (*Chemical removal (Water treatment), *Radioactive isotopes).

Radiochemical analyses of the effluent obtained from the alum treatment of a simulated nuclear bomb blast mixture in an experimental water treatment plant showed that radioelements were removed in varying amounts. These data also indicated higher and lower removals than those that had been reported earlier when only single radioisotopes were subjected to similar treatment processes. Thus a series of jar test studies were made in which single isotopes and mixtures of isotopes were subjected to similar treatment processes to obtain data on removals. Such studies would show whether certain radioisotopes would be more easily removed when combined with other isotopes or whether such combinations would interfere with removals of the specific isotopes. THE REMOVAL OF ORGANIC CONTAMINANTS FROM SECONDARY SEWAGE EFFLUENTS USING GRANULAR REGENERABLE ACTIVATED CARBON.
Interim rept. 20 Sep 61-19 Sep 62,
R. S. Joyce, and V. A. Sukenik. 1962, 37p
Contract SAph-86-62-15

Descriptors: (*Sewage treatment, *Activated carbon treatment), Performance evaluation, Surfactants, Organic compounds, Regeneration (Engineering).
Identifiers: *Tertiary sewage treatment.

The current study was initiated to obtain an approximation of the optimum bed depth and flow rates necessary for maximum economic utilization of the adsorptive properties of the carbon and to examine the feasibility of regenerating the carbon for reuse by thermal reactivation or an alternative procedure. To eliminate the concentration and composition variables encountered in a real sewage effluent and because ABS was believed to by typical of the refractory organics likely to interfere with the regeneration of the spent carbon, a solution of ABS in water was selected as the effluent for the first phase of the program. In the second phase of the program a column test was made on the effluent from a secondary sewage treatment plant.

SORPTION BEHAVIOR OF ORGANIC PYROPOLYMERS IN AQUEOUS SOLUTION.
Rept. for 1 Jun 68-30 Apr 69,
Stephen D. Bruck. 1969, 19p
Grant FWPCA-WP-01371-01-A1

Descriptors: (*Carbon, *Adsorptivity), (*Pesticides, *Adsorption), (*Polymers, *Carbonization), Nitrophenols, Pyrolysis, Herbicides.

The sorption behavior of the pyrolysis products (pyropolymers) of organic polymers was investigated. The results indicate that the pyropolymers of poly (vinyl chloride) exhibit selective adsorption towards the herbicide 2-sec-butyl-4,6-dinitrophenol but none to 2,4-dichlorophenoxyacetic acid. The initial rate of adsorption during the first hour is almost twice that of activated carbon with a total uptake of approximately 30% depending on the preparative conditions of the pyropolymers. However, unlike activated carbon, the pyropolymers of poly (vinyl chloride) slowly releases the adsorbate.

UMATILLA RIVER BASIN WATER QUALITY REPORT.
Jul 69, 42p

Descriptors: (*Umatilla River Basin, *Water pollution), (*Oregon, Water pollution).

The Bureau of Reclamation is preparing a comprehensive plan for water resource development of the entire Umatilla Basin. In developing the proposed plan for construction of dams, canals, and other facilities, they have considered all water needs, such as irrigation, municipal and industrial water supplies, fisheries and recreation. The purpose of this investigation was to predict the water quality resulting from project development and to recommend steps to improve water quality where it will not meet requirements. A dissolved oxygen model was developed for the main stem Umatilla River from Ryan Reservoir to the mouth. Predictions of dissolved oxygen levels were prepared for the time horizons of 1980, 2000, and 2020. Conditions with and without the project were modeled.

POLLUTIONAL EFFECTS OF PULP AND PAPER MILL WASTES IN PUGET SOUND.

Mar 67, 487p
Report on Studies Conducted by the Washington State Enforcement Project.

Descriptors: (*Puget Sound, *Water pollution), (*Paper industry, Water pollution), (*Washington (State), Water pollution), Industrial wastes, Chemical composition.

Investigations were conducted in four parts of the Sound and is primarily concerned with the pollutional effects of wastes discharged by seven pulp and paper mills. These study areas are Bellingham, Anacortes, Everett, and Port Angeles. Each of these mills discharges untreated or partially treated process wastes into estuarine waters. The objectives of the Project were to determine the effects of these wastes on water quality and marine life, to delineate their interferences with legitimate

water uses, and to ascertain pollution abatement needs. The study was begun in April 1962 and was completed in June 1966.

WATER SUPPLY AND WATER QUALITY STUDY PAJARO RIVER BASIN CALIFORNIA. PRELIMINARY REPORT ON FUTURE MUNICIPAL AND INDUSTRIAL WATER USE AND WATER QUALITY CONTROL NEEDS.

Apr 64, 64p

Descriptors: (*Pajaro River Basin, *Water resources), (*California, *Water resources), Water consumption, Water pollution, Forecasting.

The study considers the present and projected water quality control needs and water use within the Pajaro River Basin. Projections developed from a Corps of Engineers Economic Base Study, are made by 20 year increments to the year 2060. Pollution loads to the stream and/or alternate means of waste disposal are considered in order to determine the extent of water quality management required. Alternate methods of providing municipal and industrial water needs are investigated. This study is based on a review and interpretation of available data and reports and limited visual field observations.

INSECTICIDAL EQUIPMENT FOR THE CONTROL OF INSECTS OF PUBLIC HEALTH IMPORTANCE. TRAINING GUIDE - INSECT CONTROL SERIES.
1960, 33p PHS-Pub-774

Descriptors: (*Insect control, Equipment), Dusting, Sprayers.

The effective use of insecticides is dependent upon the availability of efficient and durable applicators. Many hundreds of sprayers, dusters, fumigators, and other devices have been designed, manufactured, and marketed; yet, equipment available today is generally inefficient and easily damaged. Acutely aware of this, manufactorers are expending great effort in research and development, but efficient applicator equipment remains one of the great unsolved problems of public health engineering. The paper discusses the problem of obtaining efficient applicator equipment. (Author Modified Abstract)

DEWATERING OF BENTHIC DEPOSITS ON SOILS.
Donald Dean Adrian, John H. Nebiker, and T. H. Feng. 1968, 30p
Grants NSF-GK-924, FWPCA-WP-01239

Descriptors: (*Spoil, *Dewatering), (*Dredging, Waste disposal), (*Waste disposal, Spoil), Theories, Mathematical models.
Identifiers: *Solid waste disposal.

Benthic deposits in our nation's rivers, lakes, reservoirs, and estuaries are producing very difficult problems of pollution including eutrophication. The only solution for the majority of the problems is the removal of these deposits. However, this does not represent a final solution. Disposal of the voluminous dredgings may result in surface and ground water pollution at the disposal site. Such pollution can be controlled by dewatering the deposits prior to final disposal. Gravity dewatering of these highly organic, compressible materials on prepared soils appears practicable. The authors have made a theoretical analysis of gravity dewatering of dredging slurries and dilute organic suspensions. A three-parameter equation was developed relating dewatering rate to the solids content, specific resistance, and compressibility coefficient of the suspensions. It is felt that a rational basis for design and operation of dredging dewatering sites now exists. (Author Modified Abstract)

Ernest M. Miholits, and Joseph F. Malina, Jr. Nov 65, 210p CRWR-11, EHE-11-6505 WP-83
Grant FWPCA-WP-00083-03

Descriptors: (*Anaerobic processes, *Metabolism), (*Sludge digestion, *Amino acids), Tracer studies, Fermentation.
Identifiers: *Methane bacteria.

The report represents a detailed study of the effects of amino acids on the anaerobic sludge digestion process and the effects of the anaerobic environment on the degradation of five selected amino acids. Radiotracer techniques permitted a detailed assay of the distribution of the individual amino acids in the liquid, solid, and gaseous phases. The control of the amino acid concentration in plant-scale anaerobic digestions systems may lead to a more efficient operation and increased gas production. The purpose of the report is to serve as the basis for a more extensive evaluation of the role of amino acids during anaerobic digestion and for the establishment of the relationships of amino acids to the effective stabilization of wastewater solids. A KRYPTON-83M GENERATOR,
A. A. Moghissi, and H. B. Huff. 13 Aug 70, 3p
Prepared in cooperation with Oak Ridge National Lab., Tenn. Pub. in International Jnl. of Applied Radiation and Isotopes, v22 p218-220 1971.

Descriptors: (*Krypton 83, Production), (*Radioactive isotopes, Production).

Krypton-83m has several useful applications. It can be used to follow the separation of (85)Kr from air for surveillance purposes and it is potentially attractive for studies of pulmonary function. Although several methods for the production of (83m)Kr have been proposed, no generator for laboratory use has been reported. A convenient method of producing such a generator seems to be by means of (83)Rb which decays with an abundance of 77 per cent to (83m)Kr. For the purpose of (83m)Kr production, the purity of (83)Rb is irrelevant and the presence of (84)Rb commonly accompanying (83)Rb poses no problem. With a half life of 83 days (83)Rb is well suited for laboratory use. The report presents a description of a (83)Rb (83m)Kr generator. (Author Modified Abstract)

A DISCUSSION AND TABULATION OF DIFFUSION COEFFICIENTS FOR TIDAL WATERS COMPUTED AS A FUNCTION OF VELOCITY.
Feb 67, 49p CB-SRBP-Technical Paper-9

Descriptors: (*Tidewater, *Diffusion coefficients), Tables (Data).

The diffusion coefficients presented in this tabulation have been computed for a velocity range from 0.01 knots to 5.00 knots at an interval of 0.01 knot. The equations employed for the computation were derived from the FOUR-THIRDS law and the RANDOM PROCESS analogy equations. A difference function and mean value function are also tabulated. (Author)

LABORATORY FACILITIES FOR FLOW IN POROUS MEDIA RESEARCH,
Donald Dean Adrian. 1967, 12p
Presented at the Internal Symposium on Fluid Dynamics (1st), Amherst, Mass., 1-2 Dec 67.

Descriptors: (*Soil properties, *Percolation), (*Sludge dewatering, Research).

An enhanced engineering research program at the University of Massachusetts will bring about greater stresses on research facilities with which to study fluid flow through porous media. The paper provides a discussion of a few areas for such research and the facilities which would be utilized in conducting an active research program. The types of research discussed are of particular interest in water resources and environmental engineering. (Author)

POLLUTION OF THE UPPER MISSISSIPPI RIVER AND MAJOR TRIBUTARIES.

Jul 66, 525p
Report on Twin Cities-Upper Mississippi River Project.

Descriptors: (*Mississippi River Basin, *Water pollution), Regulations, Water consumption, Sources.

The report determines the extent of pollution in the rivers of the study area. The study area extends on the Mississippi River for 107 miles between its confluences with the Rum and Chippewa Rivers, on the Minnesota River from its mouth upstream 110 miles to Mankato, Minnesota, and on the St. Croix River from its mouth 55 miles upstream to Taylors Falls, Minnesota. It also investigates the principal sources of pollution and contributions from these sources, determines the effect of pollution on the numerous water uses, and develops programs for the achievement of various water uses on rivers of the study area.

HYDROLOGIC COMPUTATIONS FOR RIVER BASIN STUDIES. STANDARD FOR HYDROLOGIC ANALYSIS PROCEDURES,
Frank H. Rainwater. Dec 64, 19p Working Paper-51
Report on Columbia River Basin Project for Water Supply and Water Quality Management.

Descriptors: (*River basins, *Hydrology), Stream flow.

The purpose of the paper is to describe a procedure for the hydrologic computations necessary to river basin studies. For this paper hydrology is defined as the science dealing with water, its properties, phenomena and distribution, especially with reference to water on the surface of the land, in the soil and underlying rock, and in the atmosphere. This definition implies that quantity and quality are hydrologic factors that are inseparable for a complete analysis of existing data. However, it is proposed herein to separate the computations by obtaining and analyzing data on quantities of flow, and later superimposing quality data upon the quantity analysis to determine flow and storage needs for water quality control. MIXED LIQUOR SOLIDS SEPARATION BY FLOTATION,
Michael C. Mulbarger, and Donald D. Huffman. 10 Dec 69, 11p
Contract FWPCA-WA-66-19
Pub. in Jnl. of the Sanitary Engineering Division, Proceedings of the American Society of Civil Engineers, v96 nSA4 p861-871 Aug 70.

Descriptors: (*Sewage treatment, *Flotation), Performance evaluation, Cost comparisons, Solids.

The first full-scale application of dissolved air flotation for mixed liquor solids separation has been incorporated at a new 1.0 mgd Water Pollution Control Facility in Prince William County, Virginia. The results of a field investigation at this facility are reported herein. The data indicate that conventional design criteria do not fully characterize flotation performance, and a new parameter, developed from a theoretical relationship derived by Howe is offered as a rational design and operational guideline. Flotation performance is analyzed in terms of float detention time and process design. Cost-quality comparisons of mixed liquor solids separation by flotation and gravity sedimentation are presented. BIOLOGICAL ANALYSIS OF WATER POLLUTION IN NORTH AMERICA,
A. F. Bartsch, and William M. Ingram. 1966, 16p
Pub. in Verh. Internat. Verein. Limnol., v16 p786-800 Dec 66. (Stuttgart).

Descriptors: (*Water pollution, *Aquatic biology), (*Ecology, Water pollution), Indicator species.

The two examples given emphasize that North American biologists engaged in water pollution control activities increasingly focus their skills and energy on extraordinary problems. In doing so, they utilize the saprobic system, parts of it or derivations from it, as long as the system contributes to problem solution. At present, however, most North American pollution problems are not solved by use of the saprobic system.

OUR PRIMARY CONCERN - THE STREAM,
V. G. MacKenzie. 1953, 9p
Presented at the Pennsylvania Clean Streams Conference (2nd), Harrisburgh, Pa., 20 Nov. 53.

Descriptors: (*Water resources, *Conservation), (*Water pollution, Water resources).

In summary, there is presented as a rational basis for water pollution control the 'total use' concept in which all legitimate water uses receive recognition in an integrated totality with each use accorded its proper emphasis in the public interest. The use of this concept requires a primary emphasis on the stream itself and it would appear that the technical questions involved insofar as industrial wastes are concerned, can best be resolved by an active and understanding cooperation between industry and control agencies. THE DETERMINATION OF OXYGEN CONSUMED,
W. Allan Moore. 20p

Descriptors: (*Oxygen, *Water analysis), (*Water pollution, Water analysis).
Identifiers: *Water pollution detection, *Chemical oxygen demand.

A chemical method has been sought for the estimation of the strength of waste products of either human or industrial origin; but because of the complexity of various samples of wastes, the metabolic activities of the flora and fauna present do not necessarily follow a constant rate. Therefore a chemical method could not correlate with the biochemical determination of oxygen demand. However, it is often desirable to know in a minimum time the approximate oxygen absorbing power of a waste sample so a chemical oxygen consumed method is satisfactory for this purpose. The report compares the various methods used in this determination.

SOME OBSERVATIONS ON THE REMOVAL OF RADIOACTIVE MATERIALS FROM WASTE SOLUTIONS,
Conrad P. Straub. 1950, 17p

Descriptors: (*Radioactive waste processing, *Dewatering).

Many of the methods available for use in the treatment of industrial wastes may be utilized in the treatment of radioactive wastes; however, it must be remembered that, just as in sewage and industrial waste treatment, separation of the wastes into their liquid and solid fraction and discharge of the inocuous fraction does not solve the problem. The residue remains for disposal. All that can be accomplished is to concentrate the radioactive fraction into a smaller volume to permit disposal either as a sludge or slurry. The report discusses this. Where incineration is possible, providing precautions are taken to prevent contamination by volatile gases or fly ash, further concentration or reduction in volume may be obtained. Care must be given also to the removal of the resultant ash. The reduced volume of solid material then may be placed in suitable containers and buried in controlled areas or stored for decay or future recovery.

FOAM FRACTIONATION WITH REFLUX.
Progress rept. 1 Dec 66-15 May 68,
Robert Lemlich. 28 May 68, 182p
Grant PHS-WP-00161

Descriptors: (*Flotation, Performance evaluation), Chemical engineering, Numerical analysis.
Identifiers: *Foam fractionation.

Drainage and coalescence within a vertical foam fractionation column were measured experimentally. This was accomplished by constructing and operating a vertical column equipped with a series of electrical conductivity cells mounted internally at various levels. With these cells, the variation in the local foam density along the column was determined from the variation in the local conductance. The change in bubble size was measured photographically. Other variables were determined by conventional means. The surfactants employed included Triton X-100, albumin, and saponin. Reflux ratios ranged from zero to infinity. Consideration was given to the increased separation attainable by vertically elongating the liquid pool so as to establish a concentration gradient within it. A detailed analysis of this phenomenon was prepared in terms of potential flow and penetration theory at the upstream portion of the bubble, plus a renewing wake downstream and an overall solute balance.

NITROGEN REMOVAL BY BREAKPOINT CHLORINATION,
Thomas A. Pressley, Dolloff F. Bishop, and Stephanie G. Roan. Sep 70, 41p
Presented at the National Meeting of American Chemical Society, Chicago, Illinois, September 1970.

Descriptors: (*Sewage treatment, *Nitrification), (*Chemical removal (Sewage treatment), *Ammonia), (*Chlorination, Ammonia).
Identifiers: *Breakpoint chlorination.

Breakpoint chlorination, as practiced for many years in the water treatment industry provides a physical-chemical means for removing ammonia from wastewaters. Chlorine is added to process waters until a point is reached where the total dissolved residual chlorine has reached a minimum (the breakpoint) and the NH3 minus N has disappeared. In this study sodium hypochlorite was used to oxidize the ammonia in buffered distilled water systems and in raw, secondary and lime clarified municipal wastewaters.

LAKE ERIE SURVEILLANCE DATA SUMMARY, 1967-1968.

May 68, 69p

Descriptors: (*Lake Erie, *Water pollution), Biological surveys, Chemical composition, Tables (Data).
Identifiers: *Water quality data.

Although Lake Erie is still an excellent source of municipal raw water, the effects of pollution are becoming ever more discernible. The report presents the results of a 1967-1968 survey. The dissolved solids have increased by nine percent since 1964 with progressively higher concentrations from west to east. Most chemical constituents in both water and sediment have increased during the same period. High populations of phytoplankton. Bloom conditions were not noted during the 1967-68 sampling period. Pollution-sensitive types, such as sludgeworms and bloodworms, were in profusion. The limited winter program revealed higher bacterial densities in western basin bottom waters as opposed to the nonwinter 1963-64 findings where the highest densities were found in the surface waters.

COMPENDIUM OF DEPARTMENT OF THE INTERIOR STATEMENTS ON NON-DEGRADATION OF INTERSTATE WATERS.
Aug 68, 58p

Descriptors: (*Water pollution, Standards), Government policies, National government.
Identifiers: *Water pollution standards.

One of the most significant problems that the Department of the Interior and the Federal Water Pollution Control Administration have encountered in the setting of water quality standards is what has come to be known as the non-degradation issue. This states in part, 'In no case will standards providing for less than existing water quality be acceptable.' The compendium brings together the interpretations of Secretary Udall and other Department of the Interior officials relating to the meaning and impact of the non-degradation policy. There are also attached copies of non-degradation statements which have been approved by the Secretary. It is designed to contribute to an increased understanding of the nature of the non-degradation issue and the way in which it has been resolved. (Author Modified Abstract)

SORPTION BEHAVIOR OF ORGANIC PYROPOLYMERS IN AQUEOUS SOLUTION.
Rept. for 1 Jun 68-30 Apr 69,
Stephen D. Bruck. 1969, 19p
Grant FWPCA-WP-01371-01-1A

Descriptors: (*Adsorption, *Herbicides), (*Sewage treatment, *Organic compounds), Phenols, Polymers, Carbon, Pyrolysis.

Water renovation damands the efficient removal of soluble refractory organic materials and ions from secondary effluents. This process may be carried out with activated carbon granules, the adsorption properties of which have been the subject of investigations. Despite its high effectiveness, activated carbon is relatively expensive and some problems are encountered in the regeneration process. The object of this preliminary feasibility study was to evaluate the sorption properties of selected organic pyropolymers especially with respect to organic materials and to compare the results with those obtained with activated carbons by other workers.

RADIUM SAFETY, SAFETY STORAGE RESEARCH AT THE SOUTHEASTERN RADIOLOGICAL HEALTH LABORATORY.
1973, 31p

Descriptors: (*Radium isotopes, *Radiation hazards), Safety.

The booklet is designed to acquaint the public community and others interested in radium-226 with the research programs being conducted at the Southeastern Radiological Health Laboratory to minimize radiation dangers of radium. Radium-226 is a radioactive element which has application in industry and particularly in medicine. Its use requires caution. Since its discovery about 70

years ago, about 1,300 grams of this nuclide are unaccounted for in the United States. Improper use of radium-loaded devices, sources, and damaged sources, such as these shown at the left, represents a radiation danger to health. Elimination or reduction of this health problem can be accomplished through application of proper handling, testing and management techniques in the use of radium. To this end, improvements in transportation, leak testing, and in assessment of radium and its radiation dose to humans are being studied. Several aspects of research activities are discussed, including safe storage of unwanted radium, development of effective leak-test methods, and handling equipment. (Author)

SUMMARY REPORT ON WATER POLLUTION, SOUTHWEST-LOWER MISSISSIPPI DRAINAGE BASINS.
Water pollution series.
1951, 157P PHS-Pub-160, PHS-WPS-16
Library of Congress Catalog Card No. 52-60883.

Descriptors: (*Mississippi River Basin, *Water pollution), (*United States, *Water resources), Arkansas, Colorado, Kansas, Kentucky, Louisiana, Mississippi, Missouri, Oklahoma, Tennessee, Texas.

The summary report presents information about the way our water resources are used, the pollution going into our water resources and the resulting damages, the benefits which may result from pollution prevention and abatement, the pollution prevention measures now in effect, and those required. It is prepared in two parts. Part one considers the water pollution problems of the basin as a whole. Part two presents briefly the data for each of the several sub-basins of the major basin, including a list of projects now known to be needed for water pollution control.

SOIL MOISTURE AVAILABILITY FOR TRANSPIRATION,
F. J. Molz, Irwin Remson, A. A. Fungaroli, and R. I. Drake. Sep 68, 29p

Descriptors: (*Transpiration, *Soil water), Mathematical models, Moisture.

Potential transpiration is a measure of the rate at which water can be transmitted from evaporation sites in plant leaves to the atmosphere. Potential soil-moisture availability is defined as a measure of the capacity of a soil to transmit water to a root site. A differential equation is presented describing radial flow of soil moisture to a single vertical sink (root) in an infinite soil mass which is initially at a uniform moisture content. The relationship between moisture content and diffusivity for the soils studied may be represented by an exponential function. A numerical solution of the differential equation is used to determine the soil-moisture flux. (Author Modified Abstract)

KINETICS OF HYDROGEN ASSIMILATION IN METHANE FERMENTATION,
Timothy G. Shea, W. A. Pretorius, R. D. Cole, and F. A. Pearson. Aug 68, 149p SERL-68-7
Grant PHS-WP-00830

Descriptors: (*Fermentation, *Microbiology), (*Anaerobic processes, Microbiology), Methane, Carbon dioxide, Hydrogen, Reaction kinetics.
Identifiers: *Methane bacteria.

The anaerobic fermentation of organic wastes is a stepwise degradation process which is initiated with solubilization of particulate matter and the production of volatile acids from simple and complex organic molecules, and is completed by the evolution of methane and carbon dioxide. The methane-producing stage appears to be the rate-limiting step in the overall process. The report determines the microbiological kinetic constants of the methane bacteria which ferment hydrogen, utilizing continuous-flow fermentors, and evaluates experimentally the effect of hydrogen on the methane fermentation of volatile acids.

WATER RESOURCES STUDY, TRINITY RIVER BASIN, TEXAS. STUDY OF POTENTIAL NEEDS AND VALUE OF WATER FOR MUNICIPAL, INDUSTRIAL, AND QUALITY CONTROL PURPOSES.
Oct 62, 140p
Prepared in cooperation with Army Engineer Districts, Fort Worth, and Galveston, Tex.

Descriptors: (*Trinity River Basin, *Water resources), (*Texas, *Water resources), Reservoirs, Water consumption, Water pollution.

The objective of the report is the determination of water requirements for municipal, industrial, and water quality control purposes to the year 2070 in the Trinity River basin including the Houston municipal and industrial complex. Estimates are made of the benefits attributable to the storage of water for meeting these requirements in proposed Federal reservoirs. To arrive at these needs, studies are made of the economic and demographic variables which affect water consumption. These are then projected to the terminal year of the study (2070), combined with projected unit water usage and translated into municipal and industrial water requirements. The amounts of wastes which result from these uses are calculated and the quantity of water required to preserve stream quality is determined. In addition to determining requirements, a basinwide plan for supplying these needs is developed, which provides for orderly and efficient utilization of potential water resources within the basin with full recognition of all permits, commitments, and agreements executed by local interests. AN INDUSTRIAL WASTE GUIDE TO THE WOOL PROCESSING INDUSTRY.
1955, 18p PHS-Pub-438
Prepared in cooperation with American Association of Textile Chemists and Colorists. Stream Abatement Committee.

Descriptors: (*Water pollution, Textile industry), (*Textile industry, *Industrial waste treatment), Woolen textiles, Industrial wastes.
Identifiers: *Water pollution control.

The Guide summarizes the sources of pollution in the wool-processing industry, the polluting effects of woolen-mill wastes, and information on the methods of dealing with the waste problems of the industry. Four separate operations of the industry produce liquid wastes: opening and scouring, spinning, dyeing, and finishing. Significant polluting characteristics of these individual wastes include oxygen demand, suspended solids, acidity, alkalinity, color, and grease. The polluting effect of the wastes may be reduced by substituting detergents for soap, mineral acids for acetic, synthetic compounds for starch, and similar changes. Limiting the amounts of acids, bases, and

reducing agents to the actual requirements for the process also will reduce waste loads. Wool fibers, wool grease, and fertilizer material all may be recovered from the wastes. The wastes may be treated in combination with domestic sewage, or they may be treated by (1) coagulation and precipitation with chemicals, (2) chlorination, (3) biological processes, and (4) adsorption. The information contained in this Guide can help the mill supervisor carry out his increasing responsibility to reduce the polluting effect of the mill wastes. Much can be accomplished through good housekeeping procedures which also reduce operating costs.

PICTORIAL KEYS TO ARTHROPODS, REPTILES, BIRDS AND MAMMALS OF PUBLIC HEALTH SIGNIFICANCE.
Jun 69, 197p PHS-Pub-1955
Paper copy available from GPO $2.25 as FS 2.60/7:AR 7/2.

Descriptors: (*Disease vectors, Identifying), (*Public health, Disease vectors), Taxonomy, Diagrams, Anatomy, Arthropoda, Reptiles, Birds, Mammals.

Public health biologists are often responsible for teaching animal indentification to personnel (sanitarians, engineers, physicians, veterinarians, etc.) without special training in taxonomy. One of the most successful devices for such training has been the pictorial key. After the Communicable Disease Center was founded (1946) many such keys were developed. At present the Center utilizes more than 75 such keys in its regular training program. These are the major items incorporated into this booklet. Apropos morphological diagrams are also included. Precise identification of disease vectors is essential to their efficient control. The pictorial keys are typical of identification keys found in reference works and scientific papers except that they are arranged as diagrams and are illustrated.

CONDENSED ONE-PAGE COST ESTIMATES FOR WASTEWATER TREATMENT,
Richard G. Eilers. Nov 70, 10p

Descriptors: (*Sewage treatment, Cost estimates), Capitalized costs, Construction costs, Operating costs, Maintenance.

Construction cost, amortization cost, operation and maintenance cost, and total treatment cost were calculated for various wastewater treatment processes at volume flows of 1, 7.5, 10 and 100 mgd. All construction costs were adjusted to January 1970 dollars using the construction cost index; operation and maintenance costs were adjusted to January 1970 dollars using the consumer price index. Amortization costs were calculated based on 25 years at 6% interest. Graphs of construction costs and total treatment costs versus flow for the various processes are given.

PROTECTING OUR WATER RESOURCES. THE FEDERAL WATER POLLUTION CONTROL PROGRAM.
1962, 29p PHS-Pub-950

Descriptors: (*Water pollution, *Government policies), National government.

Concepts in water pollution control are changing to meet the impact of population and industrial growth. No longer can the use of waterways as receptacles of uncontrolled wastes be accepted as a legitimate use of water. All users of waters have a responsibilit for returning those waters to the stream as clean as is technically possible. This is the new scope of national water pollution control policy. (Author)

COMBINED BIOLOGICAL AND CHEMICAL TREATMENT FOR PHOSPHORUS REMOVAL,
Michael C. Mulbarger, and Donald G. Shifflett.
1970, 11p
Availability: Pub. in Chemical Engineering Progress. Symposium Series, v67 n107 p107-116 1970.

Descriptors: (*Sewage treatment, Chemical removal (Sewage treatment)), (*Chemical removal (Sewage treatment), *Phosphorus), (*Alums, Sewage treatment), Precipitation (Chemistry).

Liquid alum and sodium aluminate were utilized for phosphorus removal at 1.0 and 0.2 million gal./day activated sludge municipal wastewater treatment plants. Phosphorus removals were determined at aluminum to phosphorus ratios up to a limiting point which exhibited a minimum total soluble phosphorus residual of about 1.0 mg./liter. More efficient use of chemical and higher phosphorus removal efficiencies are obtained in a multistage activated sludge system. The type of activated sludge system also influenced chemical phosphorus removals. Excessive effluent suspended solids were found to be more a function of the volatile solids produced to aluminum added ratio than of exceeding a given aluminum to phosphorus ratio or aluminum dosage. Batch studies indicate that aluminum as alum will outperform iron as ferric chloride on a performance/cost basis and that the best point of addition is just before solids-liquid separation. The considerations involved in this type of phosphorus removal system are discussed. (Author)

PRELIMINARY INVESTIGATION OF MUNICIPAL, AND INDUSTRIAL WATER SUPPLY AND STREAM QUALITY CONTROL REQUIREMENTS AND BENEFITS ASSOCIATED WITH MULTIPLE-PURPOSE STUDIES OF THE PROPOSED LOWER GRANDE RONDE, AND CATHERINE CREEK RESERVOIR PROJECTS, OREGON.
Jun 62, 65p Working Paper-31
Report on Columbia River Basin Project for Water Supply and Water Quality Management.

Descriptors: (*Grande Ronde River Basin, *Reservoirs), (*Oregon, *Water resources), Forecasting.

The report represents a preliminary examination of present and future municipal and industrial water supply and stream quality control needs in the Grande Ronde River Basin, Oregon with particular reference to the feasibility of providing storage and/or flow regulation to serve these needs in the Corps of Engineers' proposed Lower Grande Ronde and Catherine Creek Reservoir Projects. The report identifies uses and sources of water in areas within and adjacent to the proposed project area and describes sources and effects of waste and land drainage materials on the quality of various reaches of Grande Ronde River Basin streams.

NORTH PUGET SOUND AREA, SKAGIT AND WHATCOM COUNTIES, WASHINGTON. ECONOMIC BASE ANALYSIS AND PROJECTION, 1960-2010.
Nov 64, 16p Working Paper-49
Report on Columbia River Basin Project for Water Supply and Water Quality Management.

Descriptors: (*Puget Sound, *Economic development), (*Washington (State), Economic development), Forecasting.
Identifiers: *Skagit County (Washington), *Whatcom County (Washington).

The economic base of the North Puget Sound area rests upon three natural resources: Rich agricultural land; Forests, providing materials for lumber, plywood and pulp manufacturing; and The Puget Sound itself, which provides sea food for processing and supports recreation and boat-building industries. The report looks at the economic development in this area of Skagit and Whatcom Counties.

PHYSICAL PROPERTIES OF SEVERAL COMMERCIAL FILTER AIDS. PART II.
Final rept.,
Charles S. Oulman, E. Robert Baumann, and John Shouse. 1 Sep 68, 44p ERI-267
Contract DAAK02-67-C-0408, Grant FWPCA-WP-00196

Descriptors: (*Filter aids, Propertics), (*Filtration, Filter aids), Performance evaluation, Diatomaceous earth, Perlite.

The study characterizes some of the filter aids suitable for water filtration in terms of those physical characteristics related to their effectiveness in the filtration process. The important physical characteristics of a filter aid include particle size and shape, and the volume of voids in the cake as it is formed on a filter septum for use in filtration.

REMOVAL OF ORGANICS FROM WASTEWATER BY ACTIVATED CARBON,
John N. English, Arthur N. Masse, Charles W. Carry, Jay B. Pitkin, and James E. Haskins. 1970, 8p
Pub. in Chemical Engineering Progress Symposium Series, v67 n107 p147-153 1970.

Descriptors: (*Sewage treatment, *Activated carbon treatment).

A 0.3-million gal./day, four-stage, fixed-bed, granular activated carbon pilot plant, complete with thermal regeneration facilities, continuously treated unfiltered, activated sludge wastewater treatment plant effluent for a four-year period. High-quality product water characterized by a COD of 10 mg./liter was produced on a routine basis. A 17% decrease in carbon capacity occurred between the first and fourth cycles (one cycle per year), at which time a steady state condition was established at a capacity between 45 to 50 lb. of dissolved COD per 100 lb. of carbon. Regeneration of the carbon was shown to be a feasible process and successful backwashing of the first stage carbon, which serves as a filter and an adsorber, made pretreatment of the wastewater treatment plant effluent unnecessary.

RADIOACTIVE PARTICLES IN THE CINCINNATI ATMOSPHERE FEBRUARY 16 - MAY 12, 1955,
R. Louis Bradshaw, and Lloyd R. Setter. Sep 57, 20p

Descriptors: (*Fallout, *Ohio), (*Radioactive contaminants, Fallout), (*Air pollution, Radioactive contaminants), Particles.
Identifiers: *Cincinnati (Ohio).

The radioactivity of air particles in samples collected from 20 to 30 municipalities in the National Air Sampling Network, established in 1953, indicated an increase of beta radioactivity of 1000 fold or more immediately following known atomic weapon tests. It was suspected that substantial amounts of the total radioactivity might be associated with discrete particles which might find their way into the respiratory tract of man. The purpose of the study was to determine the radioactivity distribution of collected particles. Samples collected at the Robert A. Taft Sanitary Engineering Center, Cincinnati, Ohio, during the spring of 1955 provided the test material for this study, the results of which are reported in the document.

SEWAGE AND WATER WORKS CONSTRUCTION, 1963.

Jul 64, 17p PHS-Pub-758

Descriptors: (*Sewage treatment, *Contracts), (*Water treatment, *Contracts), Inventories.
Identifiers: *Sewage treatment plants.

The annual report of 'Sewage and Water Works Construction 1963' is published as one part of the basic data program required and authorized in Public Law 660 (as amended by Public Law 87-88), the Federal Water Pollution Control Act. The data published provides a continuing and ready source of information and reference as to how successfully the national needs in municipal water supply and pollution control are being met through construction of the necessary physical facilities. The publication also establishes important year-to-year cost trends in the national economic picture in the three types of public works construction involved.

TRACE ELEMENT NEEDS OF FILAMENTOUS MICROORGANISMS,
John T. Pfeffer. Dec 67, 84p
Grant FWPCA WP-00646

Descriptors: (*Sewage treatment, Microorganism control (Sewage)), (*Fungi, *Microorganism control (Sewage)), (*Fusarium, Microorganism control (Sewage)), Nutrients, Metabolism, Inhibitors.

The following conclusions are drawn from the results of the study: Extreme care must be exercised in the preparation of chemically defined media if precipitation of trace metals is to be prevented. The only trace metal required for growth of the fungus, Fusarium, on acetate, glucose and glycerol media was iron. Zinc was a stimulant for Fusarium growth on acetate and glucose, but was not required for moderate growth. The only trace metal required for growth of the fungus, Geotrichum on glucose and glycerol media was zinc. This organism required only iron for growth on acetate medium. Iron was a stimulant for Geotrichum growth on glucose and glycerol, but was not required for moderate growth. Glucose media containing only the trace metals iron and manganese yielded the optimum growth characteristics for the mixed culture studies. Acetate media containing only the trace metals iron or manganese yielded the optimum growth characteristics for the mixed culture studies.

WATER QUALITY AND AQUATIC BIOLOGY, EAST FORK KAWEAH RIVER. MINERAL KING AREA CALIFORNIA.
Aug 69, 40p

Descriptors: (*Kaweah River, *Water pollution), (*California, Water pollution), Biological surveys, Chemical composition.
Identifiers: *Sequoia National Forest, *Mineral King Valley.

Water quality and aquatic biological surveys were conducted during November 1967, and June and August 1968 on the East Fork Kaweah River in the Mineral King section of the Sequoia National Forest, California. The purpose of these surveys was to document the present quality of this stream prior to development of a year-round recreational area. Sampling included field measurements of temperature, dissolved oxygen, pH, and electrical conductivity; water samples were analyzed for nitrogen and phosphorus forms, iron and chlorophyll. Biological assessments included algal growth potential and enumeration and identification of planktonic and attached algae and benthic animals. (Author Modified Abstract)

TASTE AND ODOR PRODUCING SUBSTANCES IN WATER,
M. B. Ettinger, and A. A. Rosen. 1957, 11p
Presented at Ontario Industrial Waste Conference (4th), Honey Harbour, Ontario, Canada, June 9-12, 1957.

Descriptors: (*Water pollution, *Taste), (*Water pollution, Odors).

The evident trend in the taste and odor quality of raw water is downward. Estimates of stream pollution in terms of population equivalents show an ever-upward trend. Taste and odor loads may be expected to increase more rapidly than loads in terms of 'population equivalents' because of many factors. Subject to relief by self-purification in streams, organic pollutants of surface waters present an additive assault on water quality, and each tangible organic source is a factor in determining the odor of the resulting water. These topics are discussed.

STUDY OF PULP AND PAPER MILL POLLUTION IN PUGET SOUND,
A. F. Bartsch. 1965, 23p
Pub. in Proceedings of the International Water Pollution Research Conference (2nd) Held in Tokyo (Japan) Aug 64, p43-64 1965.

Descriptors: (*Puget Sound, Water pollution), (*Water pollution, *Spent liquors (Pulping)), (*Paper industry, Water pollution), (*Washington (State), Water pollution), Biological surveys, Bioassay.
Identifiers: *Water pollution effects (Animals).

The report discusses a program under way since spring 1962. Among its several phases are field studies at four locations where seven pulp and paper mills discharge wastes into Washington's Puget Sound waters. Reported are the findings of essentially the first year's field research at Everett, Washington, one of the four study sites. Also identified problems encountered and new procedures found necessary. The program objective was to determine the effects of wastes from the pulp and paper mills on the marine environment and its harvestable resources.

CHARACTERIZATION OF INDUSTRIAL FABRIC FILTERS,
George William Walsh, and Paul W. Spaite. 1960, 22p

Descriptors: (*Air pollution control equipment, *Gas filters), Performance evaluation, Gas flow.
Identifiers: *Fabric filters.

The report examines the systematic nonuniformities inherent in multicompartmented baghouse operation, and analyzes the over-all performance in relation to the characteristics of the individual compartments. Those properties of an operating unit which can be used to characterize the installation are delineated, and a methodology developed whereby critical values of these properties may be calculated from easily obtainable field measurements. The critical characteristics are defined as the residual filter drag of a compartment, the terminal filter drag of a compartment, and the residual velocity. The utility of these characteristics to determine the cause of operating difficulties is discussed. (Author Modified Abstract)

WATER QUALITY CONSERVATION, ARKANSAS-RED RIVER BASINS. APPENDIX. VOLUME II. WATER QUALITY DATA. PART 4. STREAM UNIFORMITY STUDY DATA AND BASIS FOR CORRELATION OF SPECIFIC CONDUCTANCE AND CHEMICAL ANALYSES, RED RIVER BASIN.

Mar 64, 313p

Descriptors: (*Arkansas River Basin, *Water pollution), (*Red River Basin, *Water pollution), (*Oklahoma, Water pollution), (*Colorado, Water pollution), (*New Mexico, Water pollution), (*Arkansas, Water pollution), (*Louisiana, Water pollution).
Identifiers: *Water quality data.

The compilation of water quality data collected during the 27-month period of intensive study (July 1960 through September 1962) of the Arkansas-Red River Basins Water Quality Conservation Project is presented in five parts. These data were gathered to provide a basis for location and definition of the significant natural and manmade sources of salt (mineral) pollution, and determination of the effects of these sources on the quality of water in the receiving streams. The intensive investigation of water quality and natural sources of mineral pollution was limited to the central portions of both basins, the area in which major salt sources exist, and mineral pollution is most severe. PRELIMINARY INVESTIGATION OF MUNICIPAL AND INDUSTRIAL WATER SUPPLY AND STREAM QUALITY CONTROL REQUIREMENTS ASSOCIATED WITH MULTI-PURPOSE RESERVOIR STUDIES IN THE WILLOW CREEK BASIN, OREGON.
21 Dec 61, 27p Working Paper-33
Report on Columbia River Basin Project for Water Supply and Water Quality Management.

Descriptors: (*Willow Creek Basin, *Reservoirs), (*Oregon, *Water resources).

The report represents a preliminary examination of present and predicted future municipal and industrial water supply and stream quality control needs in the Willow Creek Basin. The objective of the study was to determine on a preliminary basis whether or not provisions for municipal and industrial water supply and/or low flow augmentation for stream quality control should be considered in the planning of the proposed reservoir. Studies involved Heppner, Oregon (population 1,660), located immediately below the proposed dam site, and Lexington, Oregon (population 240) and Iona, Oregon (population 350), situated approximately eight miles and seventeen miles downstream from Heppner, respectively.

Grant FWPCA-WP-00544
Report on Partial Demineralization of Saline Sewage by Ion Exchange.

Descriptors: (*Sewage treatment, *Ion exchanging).
Identifiers: *Tertiary sewage treatment.

The purpose of the investigation was to ascertain the feasibility of using ion exchange for the removal of the mineral portion of the use increment in sewage prior to re-use. Specifically, (1) to optimize the operating variables of a strong acid cation-weak base anion exchange system for the partial demineralization of brackish waste water, (2) to develop a rational basis for the design of partial demineralization systems for municipal use, (3) to identify the limitations and the operational difficulties, and (4) to determine the economic feasibility of the process in comparison with other methods.

PARTIAL DEMINERALIZATION OF UNCONTAMINATED BRACKISH WATERS.
Progress rept. no. 2,
R. L. Sanks, and W. J. Kaufman. May 66, 47p
Grant FWPCA-WP-00544
Report on Partial Demineralization of Saline Sewage by Ion Exchange.

Descriptors: (*Desalting, *Ion exchanging), Brackish water, Cost estimates, Performance evaluation.

The broad objective of the study was to optimize the design and operating cycle of ion exchange systems for the specific purpose of demineralizing brackish waters for municipal use. As regenerant chemicals comprise a major item of cost in ion exchange demineralization, special emphasis was placed on ascertaining the most efficient exhaustion-regeneration cycle. Throughout the study advantage was gained by using the generally lower domestic criteria of mineral acceptability in comparison with the usual industrial requirements for low conductivity water.

A REPORT ON THE PUBLIC HEALTH ASPECTS OF CLAMMING IN RARITAN BAY,
Robert W. Kehr, Benjamin S. Levine, C. T. Butterfield, and Arthur P. Miller. 1941, 128p

Descriptors: (*Raritan Bay, *Water pollution), (*Clams, Raritan Bay), (*New Jersey, Water pollution), (*New York, Water pollution), Public health, Sources, Aquatic microbiology, Biological surveys, Fishing grounds.
Identifiers: *Water quality data.

During the summer of 1940 it was indicated that waters of the Raritan Bay area were of doubtful sanitary quality for the taking of clams. Therefore, a detailed survey was made and a standard defining the allowable limits of pollution within which the public health would not be endangered by the taking of clams from the area was formulated. The survey covered practically the entire period of April, May and June, 1941, and was made by three cooperating laboratories whose procedures were coordinated under the immediate direction and supervision of the U.S. Public Health Service.

TRACING POLLUTED RESERVOIR INFLOWS WITH FLUORESCENT DYES.
Technical rept.,
Michael W. Morris, and Edward L. Thackston.
May 69, 56p TR-18

Descriptors: (*Reservoirs, *Tracer studies), Stream flow, Hydraulic models, Stratification.

The flow patterns and mixing, or dispersing, characteristics of storage impoundments must be investigated to determine the effects of the reservoirs on water quality and to determine the methods of operating, or controlling, the reservoirs to produce the highest water quality. The most promising methods for studying the mixing characteristics and flow patterns of reservoirs entails the use of a conservative or semiconservative tracer. Furthermore, the fluorescent tracers appear to be the most practical for these studies. It is the purpose of the investigation to demonstrate the usefulness of these tracers.

STREAM TEMPERATURE PREDICTION METHODOLOGY,
J. Seaders. Mar 64, 18p Working Paper-46
Report on Columbia River Basin Project for Water Supply and Water Quality Management.

Descriptors: (*Stream pollution, Heat), (*Stream flow, Heat flux), (*Water pollution, Heat), Heat budget, Mathematical models.
Identifiers: *Thermal pollution.

The purpose of this report is to describe the methods used to find the increase in river water temperature as a parcel of water moves downstream. The elements of the problem are: (1) the mass of water affected in a given time period; (2) the energy input per unit of area for this period; (3) the exposed area of the water surface. The problem is to find the value of area and energy input for a given set of weather and discharge conditions. The subject will be solved in parts as follows: Development of energy budget table and its application; Development of travel time curves for constant discharges; and Development of exposure area curves for constant discharges.

DETERMINATION OF MINE WASTE ACIDITY,
B. V. Salotto, E. F. Barth, M. B. Ettinger, and W. E. Tolliver. Jan 67, 27p

Descriptors: (*Mine waters, *Acidity), (*Water pollution, Mine waters), Water analysis, Hydrogen peroxide, Oxidation, Iron.
Identifiers: *Mine acid drainage.

Pollution from acid mine drainage is a chronic problem. The current vigorous interest has led to a re-examination of the methods of measuring total acidity, which are clearly based on the limited laboratory capabilities of prior years. Defined acid-metal mixtures containing iron (III), aluminum (III), iron (II), and hydrogen ion were reacted with sodium hydroxide under varying titration conditions. Results showed that at 25C a reliable measure of the total acidity can be obtained by oxidizing iron (II) with hydrogen peroxide and stopping the titration at pH 7.3. Hydroloysis of Fe (III) and Al (III) was complete at pH 7.3 before formation of aluminate ion. Positive interference due to manganese and hardness can be held to a minimum by proper selection of sample volume. Acidity due to carbon dioxide is easily removed by aeration. The procedure was applied to the analysis of acid mine sample with added standards with recoveries of 98 to 103%. (Author)

STUDIES ON THE METHANOGENIC BACTERIA IN SLUDGE.
Summary progress rept.,
P. H. Smith. 31 May 68, 21p
Grant FWPCA-WP-00198-08

Descriptors: (*Sewage treatment, Anaerobic processes), (*Anaerobic processes, Process variables), (*Fermentation, *Metabolism), Nutrients, Digestion (Decomposition).

Identifiers: *Methane bacteria.

The objective of the project has been to quantitatively define the intermediate molecules preceding methane formation during sludge digestion. The assumption is made that if these intermediates are clearly defined the factors influencing their rates of metabolism can then be investigated, and that understanding of factors influencing these rates should suggest methods for controlling and increasing the rate of anaerobic digestion processes. The contribution of various intermediates as precursors of methane have been investigated using methods similar to those previously described by the principal investigator.

PORTLAND HARBOR SURVEYS, LOWER WILLAMETTE RIVER, SUMMER 1961.

1961, 29p Working Paper-25
Report on Columbia River Basin Project for Water Supply and Water Quality Management.

Descriptors: (*Willamette River, *Water pollution), (*Oregon, Water pollution), Portland Harbor.
Identifiers: *Portland (Oregon), *Water quality data.

During the summer of 1961, the Public Health Service and Oregon State Sanitary Authority cooperated in several water quality surveys on the lower Willamette River downstream of Oregon City. Sampling station locations were midstream at No. 1 - SP and S Bridge (R.M. 7.0); No. 2 - Steel Bridge (R.M. 12.0); No. 3 - Staff Jennings (R.M. 16.5). The three stations were sampled every two hours at midstream for a 24-hour period. Measurements were made at the surface, mid-depth, and bottom 1/ of dissolved oxygen, biochemical oxygen demand, sulfite waste liquor, pH, and temperature. The BOD and SWL were sampled at mid-depth only. River stage data was made available by the U. S. Weather Bureau which operates a recording water level gage in the Portland Harbor.

TURBULENT DIFFUSION AND REAERATION IN NATURAL RIVERS.
Progress rept. 1 Jun 68-31 May 69,
Peter A. Krenkel. 15 Apr 69, 16p
Grant WPD-168-02-68

Descriptors: (*Stream flow, *Turbulent diffusion), (*Reservoirs, *Tracer studies), Stratification, Dissolved gases, Oxygen.

The project was designed to demonstrate the feasibility of using refined tracer techniques to measure mixing and diffusion taking place under non-steady, non-uniform flow conditions. Specifically, the test demonstrated the feasibility of using fluorescent dyes to trace polluted water, traveling as a power wave, into and through a stratified impoundment. Measurements of longitudinal, lateral, and vertical mixing were made to demonstrate the feasibility and ease of this technique in determining mixing coefficients, which can be used to predict the spread of polluted inflows in a stratified environment.

Robert B. Dean. Apr 69, 11p

Descriptors: (*Industrial waste treatment, *Lagoons (Ponds)).
Identifiers: *Aeration ponds.

Lagoons for industrial wastes have developed out of simple holding pits to contain solids and remove water by evaporation, infiltration, or overflow. The eventual failure of such lagoons has led to more sophisticated management of various types. Lagoons are used to provide one or more of the following treatments: mixing and equalization of loads, clarification and retention of solids, de watering, chemical neutralization or conversion, and removal of biologically active materials. Each of these functions is discussed with emphasis on the ultimate fate of the materials that have been placed into the lagoon. (Author)

A. P. Altshuller, A. F. Wartburg, I. R. Coben, and S. F. Sleva. 1961, 13p

Descriptors: (*Gas storage, *Bags), Permeability, Thermal stability.
Identifiers: Plastic bags.

The report describes investigations on the stability of a number of substances in the 0.1 to 1000 ppm range stored for several hours to several days in 'Mylar' and 'Scotchpak' bags. The compounds investigated most include numerous olefins, formaldehyde, acrolein, ozone, nitrogen dioxide, and sulfur dioxide. Many other substances, including aromatic hydrocarbons, phenols, crotonaldehyde, and alcohols, have been used in these bags but only qualitative or semi-quantitative information was obtained on their stability. Data also have been obtained on the stability of olefins, formaldehyde, acrolein, and nitrogen dioxide in samples of automobile exhaust effluents and diluted irradiated automobile exhaust stored in plastic bags.

LIMITATIONS IN THE USE OF THE END-WINDOW COUNTER IN THE ASSAYING OF STREAM WATERS FOR BETA RADIOACTIVITY,
L. R. Setter, J. S. Nader, and G. R. Hagee. Sep 52, 21p

Descriptors: (*Water analysis, *Beta particles), (*Radiation measuring instruments, Beta particles), (*Radioactive contaminants, Water analysis).
Identifiers: *Water pollution detection.

Stream water to be assayed for beta radioactivity will have natural radioactivity with or without artificial radioactivity. The principle source of natural radioactivity is from K40 and from uranium, thorium and their daughter products. The artificial radioactivity will be the result of contamination from (a) the disposal of radioactive wastes, (b) fall-out from a contaminated atmosphere, and (c) the use of stream waters by atomic energy installations. The paper discusses the use of the end-window counter for the assay of the absolute beta radioactivity of stream water, its limitations, and the necessary corrections.

SURVEY OF LITERATURE RELATING TO ATMOSPHERIC POLLENS AND HAY FEVER,
John S. Wiley. Jan 50, 42p

Descriptors: (*Pollen, *Hay fever), (*Air pollution, Pollen), Allergic diseases, Aerobiology, Plants (Botany), Bacteria, Reviews.

Preliminary to the inauguration of research work on atmospheric sampling for the determination of ragweed pollen concentrations, a cursory survey of the literature on pollens and hay fever was made. Even through this survey is far from complete it might serve as a source of information for those interested in this subject. Because of the similarity of sampling and counting procedures for the determination of air-borne pollens and bacteria, and in view of the trend toward additional research in bacterial air contamination, a number of the following references pertain largely to bacterial air sampling. Abstracts have been prepared of a number of the references cited. (Author Modified Abstract)

RECOVERY OF COAGULANT, NITROGEN REMOVAL, AND CARBON REGENERATION IN WASTE WATER RECLAMATION.
Final rept., 1 Apr 65-14 Jun 67,

David W. Callahan, Russell L. Culp, Clinton E. Smith, and Robert L. Chapman. Jun 67, 204p

Descriptors: (*Sewage treatment, *Water reclamation), (*Lake Tahoe, Sewage treatment), Chemical removal (Sewage treatment), Coagulation, Activated carbon treatment, Alums, Calcium oxides, Nitrification, Ion exchanging.
Identifiers: *Tertiary sewage treatment, *Denitrification, Ammonia stripping.

The report summarizes 26 months of work in waste water reclamation at the South Tahoe Public Utility District plant, South Lake Tahoe, California. The purpose of the project was to evaluate the performance of the operating, advanced waste treatment plant, which included conventional biological treatment and anaerobic sludge digestion, as supplemented by chemical coagulation, mixed-media filtration, and activated carbon adsorption, with particular attention to the regeneration and reuse of granular activated carbon. In addition, investigations were to be made of coagulant recovery and reuse, and removal from the waste waters of the biological nutrients – phosphorus and nitrogen. Information gained during the studies was to be used in the proposed expansion of the plant to a total capacity of 7.5 mgd.

REPORT ON POLLUTION OF THE NAVIGABLE WATERS OF EASTERN NEW JERSEY, SHARK RIVER TO CAPE MAY.

May 67, 53p

Descriptors: (*Atlantic Ocean, Water pollution), (*New Jersey, *Water pollution), Coasts.

The study area extends from Shark River on the north to Cape May on the south, and embraces the navigable estuaries and tributaries of the Atlantic Coastal Area of New Jersey. It includes Shark River and inlet, Manasquan River and inlet, the Intracoastal Waterway, and the various bays, harbors, and streams tributary to the waterway. The study waters have a surface area of more than 115,000 acres. Municipal and institutional waste discharges constitute the greatest source of pollution within the New Jersey coastal basin. A recent Federal Water Pollution Control Administration survey of municipal and institutional wastes discharged into the New Jersey Coastal Basin between Shark River and Cape May found that: 23 sources discharge directly into the Atlantic Ocean, 30 discharge directly into the estuary (shellfish waters), 23, including three Federal installations, discharge to tributary streams. The report summarizes information regarding these waste sources.

THE COST OF CLEAN WATER. VOLUME III. INDUSTRIAL WASTE PROFILE NO. 4 TEXTILE MILL PRODUCTS.
Sep 67, 153p
See also Volume 1, PB-217 567.

Descriptors: (*Textile industry, *Industrial waste treatment), (*Cost analysis, Industrial waste treatment).
Identifiers: *Water pollution control.

The Industrial Waste Profile is divided into three major sections. The first section surveys the Wool Textile Weaving and Finishing Industry; the second section, the Cotton textile Finishing Industry; and the third section, the Synthetic textile Finishing Industry. All of these industries are complex, variable, and in constant transition. As research and development provide new chemicals, processes, machinery, and techniques, and as consumer demand for types of fabric and color varies, the wastes generated by the industry change also. For this reason, the study has emphasized the principal types of textiles produced. For the purposes of this study, it is important to differentiate between the finishing process and the textile operations preceding it. Except for the scouring of raw wool, the making of raw fiber into unfinished cloth or yarn is essentially a dry operation. The finishing operation is a large producer of liquid wastes, however, and is the segment of the industry which concerns us.

WATER QUALITY STUDIES: ROOSEVELT LAKE - WASHINGTON.

22 May 53, 52p

Descriptors: (*Roosevelt Lake, *Water pollution), (*Washington (State), Water pollution), (*Columbia River, *Water pollution), Reservoirs.
Identifiers: *Water quality data.

A study of the water quality characteristics and biological conditions in Roosevelt Lake was made during the period September 22 to October 1, 1952. Information from this reservoir, a high 'multiple purpose' type of impoundment with water depths up to 385 feet, would be expected to give data valuable in predicting effects of future Columbia River impoundments. Samples of water, plankton, bottom animals and fish were obtained at ten ranges throughout the reservoir to determine existing physical, chemical, bacteriological and biological characteristics. Radiological background information was obtained from some of these samples.

Descriptors: (*Sewage treatment, *Inventories), (*Industrial waste treatment, *Inventories), Alabama, Florida, Georgia, Mississippi, South Carolina, Tennessee.

The inventory contains the latest available data for all sources of pollution, both municipal and industrial, which are of significance in water pollution control programs. In the listing, each non-community entry is referred to the nearest community, whenever possible. Entries appear in alphabetical order according to community. Entries listed under the same community are alphabetized by name, under that community. Following the listing for each State there is a table showing those sewage disposal facilties which serve more than one of the entries, together with the names of all entries which are served by the particular facility.

ATOMIZATION AND DROP SIZE OF NON-NEWTONIAN FLUID.
Final rept. 1 Sep 65-May 69,
K. H. Wang, Yoshisuke Nakano, and Chi Tien.
1969, 135p
Grant FWPCA-WP-00867

Descriptors: (*Atomizing, *Polymers), Rheology, Drops (Liquids).

The object of the investigation was to study the effect of various physical parameters on the drop size distribution formed in an atomization process for liquid with non-Newtonian rheological behavior. This study was motivated by the potential application of the Atomization Suspension Technique in ultimate disposal and the observation that suspensions and slurries often behave like non-Newtonian fluid. The principal findings are: The freezing technique is an account method of determining liquid drop sizes; The drop size distribution of non-Newtonian liquid can be described in terms of square-root normal distribution; and A stochastic model was successfully developed for the breakup mechanism in penumatic atomization. WATER QUALITY AND POLLUTION CONTROL STUDY. JAMES RIVER BASIN.

Jun 67, 111p CB-SRBP-Working Document-14

Descriptors: (*James River Basin, *Water pollution), (*Virginia, Water pollution).

The document, by describing the immediate water pollution control action needed in the James River Basin, represents the first step in the development of a comprehensive program to control water pollution in the Basin. A biological study of the upper reaches of the James River and tributaries conducted by Chesapeake Bay-Susquehana River Basin Project comprised a special investigation to supplement sampling data of chemical and biochemical characteristics of water quality. Brief summaries of the biological studies are given, along with summaries of quality data, for most of the areas above Lynchburg, with more detailed descriptions of biological conditions outlined in the Appendix.

PB-217 607
Federal Water Pollution Control Administration, Philadelphia, Pa. Delaware Estuary Comprehensive Study.
PRELIMINARY REPORT AND FINDINGS.
Jul 66, 137p

Descriptors: (*Delaware Estuary, *Water pollution), New Jersey, Pennsylvania, Delaware.
Identifiers: *Water quality data.

For three generations pollution of the Delaware has been self-evident. However, up to now there has never been available a detailed analysis of that pollution; what it is, who is responsible for it, what might be done, and what it would cost to abate it. In 1957-58, at the request of the Corps of Engineers, the Public Health Service made a preliminary study of pollution in the Delaware Estuary. This in turn led to the making of the comprehen-

sive study covered by the report. The study was begun in 1961 by the Water Supply and Pollution Control Division of the Public Health Service, now the Federal Water Pollution Control Administration, at the request of the state and interstate pollution control agencies. This is a preliminary report of that study.

INVESTIGATION OF TRITIATED LUMINOUS COMPOUNDS.
Final rept.
31 Mar 70, 22p
Sponsored in part by Army Mobility Equipment Research and Development Center, Fort Belvoir, Va.

Descriptors: (*Tritium compounds, *Radiation hazards), (*Industrial medicine, Tritium compounds), Radioactive isotopes, Absorption (Biology), Metabolism, Gastrointestinal system, Skin, Cats, Rats, Paints, Luminescence, Experimental data.

Radioactive luminous compounds represent a significant potential source of radiation exposure to both industrial workers and the general public. Luminous compounds with tritium as the activating agent are in relatively widespread usage in the painting of watch and instrument dials and in the production of radio-luminescent light sources. It is therefore desirable to have accurate information regarding the degree of uptake and the metabolic behavior of tritiated luminous compounds in general, and comparative data regarding the specific tritiated compounds now in use. In the present study the gastrointestinal (GI) tract and cutaneous absorptions of four commercially available tritiated luminous compounds were investigated. The cat was chosen as the experimental animal for studies of GI tract absorption because of the relative similarity of its GI system with that of the human. Cutaneous absorption of the tritiated compounds was studied in the rat.

A COMPREHENSIVE PROGRAM FOR WATER POLLUTION CONTROL FOR THE MISSISSIPPI-WAPSIPINICON AND TRIBUTARIES RIVERS BASIN DEVELOPED BY THE STATE WATER POLLUTION CONTROL AGENCIES, OF ILLINOIS, IOWA, MINNESOTA, AND WISCONSIN.
Water pollution series.

1953, 50P PHS-Pub-347, PHS-WPS-62

Descriptors: (*Mississippi River Basin, *Water pollution), (*Wapsipinicon River Basin, *Water pollution), (*Illinois, Water pollution), (*Iowa, Water pollution), (*Minnesota, Water pollution), (*Wisconsin, Water pollution).

The report, prepared in cooperation with the water pollution control agencies of Iowa, Illinois, Minnesota, and Wisconsin, sets forth the water pollution control program being followed by the respective States in the Mississippi-Wapsipinicon and Tributaries Rivers Basin. This program, which is based on data available as of July 1, 1953, was developed after a thorough consideration of the existing and potential uses of the water resources in the basin; the pollution entering the streams and the resulting damages; the benefits which may result from pollution prevention and abatement; and the prevention measures now in effect as well as those which are needed.

PROTEIN CONTENT OF THE ATMOSPHERE.
Technical rept. Apr 53-Jul 55,
Leslie A. Chambers, Elbert C. Tabor, and Milton J. Foter. 1958, 45p SEC-TR-A58-9

Descriptors: (*Air pollution, *Proteins), United States.

As a part of the general air pollution program, a study was made of the protein content of the atmosphere. This may be of some importance in a study of allergens and indicative of certain sources of air pollution. Sampling stations were located at selected points throughout the continental United States and Alaska. The objectives of the investigation were: (1) development of an analytical method suitable for determining protein content in the presence of normal air contaminants; and (2) frequent air sampling to determine the variation of the protein concentration as a function of time and of height above ground.

LIME PRECIPITATION IN MUNICIPAL WASTEWATERS,
John B. Stamberg, Dolloff F. Bishop, H. Paul Warner, and Samuel H. Griggs. 1970, 9p
Pub. in Chemical Engineering Symposium Series, Water, v67 n107 p310-320 1970.

Descriptors: (*Sewage treatment, Chemical removal (Sewage treatment)), (*Chemical removal (Sewage treatment), *Phosphorus), (*Precipitation (Chemistry), Phosphorus), Calcium oxides, Inorganic phosphates.

Liming of District of Columbia raw or treated wastewater to pH 10 insolubilized the various forms of phosphorus in the wastewater, but removals to residuals of 0.3 mg./liter as P occurred only above pH 11.5, where precipitated magnesium hydroxide flocculated the turbidity. Nitrification of the wastewater during biochemical (secondary) treatment reduced the lime requirement for precipitation, the amounts of sludge from precipitation, and also improved phosphorus removals. Liming of organic free solutions insolubilized mixtures of ortho and polyphosphates by pH 10, although insolubilization of meta or tripolyphosphate alone required a pH above 11. The degree of biochemical oxidation significantly influenced the phosphorus removals, while temperature and ionic strength did not. (Author)

THE USE OF ORGANIC POLYELECTROLYTE FOR OPERATIONAL IMPROVEMENT OF WASTE TREATMENT PROCESSES,
John J. Wirts. May 69, 105p
Grant FWPCA-WPRD-102-01-68

Descriptors: (*Sewage treatment, Flocculating), (*Polyelectrolytes, *Flocculants), Cost estimates.

Federal Water Pollution Control Administration - City of Cleveland demonstration of Raw Waste Flocculation Process conducted at Cleveland Easterly showed significant improvements in plant operations, such as (1) increase in SS and BOD removals in primary treatment, (2) more efficient operation of the secondary treatment process, (3) increase in sludge pumpability in a 13 mile force main, and (4) cost savings approaching cost of polymer treatment. A detailed cost analysis showed that significant capital costs savings could result if this process were practiced. A completely automated polymer dispersal and addition system was developed.

WATER SAMPLING FROM FIXED WING AIRCRAFT,
Charles W. Ferst, and R. Kenneth Tinsley. Aug 69, 14p

Descriptors: (*Water pollution, Sampling), Aircraft.

When a pesticide formulation plant and warehouse at Massies Mill, Virginia, was destroyed by flood waters in 1969, it was not known whether the pesticides or other toxic materials had contaminated the river, and samples were urgently needed during the initial flood period. Boat sampling or sampling from a helicopter were unsafe, and representative sampling locations were inaccessible. It was decided that samples would be taken utilizing an aerial pick-up technique generally used for air rescue operations. The report describes this technique.

EFFECT OF WALL DEPOSIT ON PHOTOCHLORINATION KINETICS,
Dariusz Ziolkowski, A. E. Cassano, and J. M. Smith. 1967, 4p
Grant FWPCA-WP-00952
Pub. in AIChE Jnl., v13 n5 p1025-1028 Sep 67.

Descriptors: (*Chlorination, *Hydrocarbons), (*Photochemistry, Chlorination), Deposits.

Several references in the literature have given evidence of reactor wall deposits in photochlorination of hydrocarbons in the gas phase. The expected effect of the deposit is to reduce the light intensity, which in turn lowers the reaction rate. The work reported was designed to determine the effect of the wall deposit on the significance of heterogeneous termination steps.

CONCENTRATION AND ACCUMULATION OF METALLIC IONS BY THE BACTERIUM 'ZOOGLOEA',
Barry A. Friedman, and Patrick R. Dugan. 1968, 8p
Grant FWPCA-WP-00713-04
Pub. in Developments in Industrial Microbiology, 1968, p381-388.

Descriptors: (*Pseudomonadaceae, Metals), Metabolism, Biochemical oxygen demand, Activated sludge process, Bacteria, Biochemistry, Physiology, Enzymes, Zinc, Accumulation.

Zoogloea-producing bacteria are common in natural waters and appear to be able to survive and grow in the presence of rather high concentrations of contaminants. They have been isolated consistently from oxidative waste treatment systems where they have been reported to cause a rapid decrease in the biochemical oxygen demand. Our interest in these organisms is centered upon the unique properties of the zoogleal material surrounding the cells. It is lacking in nonzoogloea-forming organisms. Studies have been made of several of these bacteria and their ability to concentrate several metallic ions. (Author)

TRITIUM BODY BURDEN OF CHILDREN, 1967-1968,
A. A. Moghissi, and Robert Lieberman. May 70, 5p

Descriptors: (*Tritium, *Children), (*Radiation hazards, Tritium), Body fluids, Radioactive isotopes, Radiation dosage, Urine, Surface waters, Sources, Public health.

The tritium concentration in body water of children was determined from samples of urine taken from two children in each of nine Institutional Total Diet Sampling stations. The tritium concentrations in body water of children gradually decreased from about 1.5 nCi/liter to less than 0.2 nCi/liter during the period, January 1967 to December 1968. Several anomalies were noted. The dose equivalent from tritium for standard man was calculated to be 0.15 mrem for 1967 and 0.13 mrem for 1968. The dose equivalent for children varies according to age and is roughly 0.1 mrem for a 13-year-old child. (Author)

COLLOIDS COMPLICATE TREATMENT PROCESSES,
Robert B. Dean. 1969, 5p
Pub. in Environmental Science and Technology, v3 n9 p820-824 Sep 69.

Descriptors: (*Sewage treatment, *Colloids), Reviews.

The article discusses high molecular weight polymers, which are natural anionic polyelectrolytes bearing an excess of negative charges. They are present in the effluents of waste water treatment plants employing biological processes. These colloids are derived principally from the capsular slimes of bacteria and other microorganisms. Although the absolute quantity of polymers is less than 10 mg. l., the effects produced by these hydrocolloids have a large influence on physiocochemical processes used to purify waste water. The polymers offer great resistance to filtration and interfere with other membrane processes such as electrodialysis and heat transfer.

EFFECTS OF MICROWAVES ON OPTICAL ACTIVITY,
A. A. Moghissi, G. L. Rehnberg, and E. W. Pepper. 1969, 4p
Prepared in cooperation with Southeastern Radiological Health Lab., Montgomery, Ala. Pub. in Proceedings of Symposium on Biological Effects and Health Implications of Microwave Radiation, held in Richmond, Va., 17-19 Sep 69. Sponsored in part by Bureau of Radiological Health, Washington, D.C.

Descriptors: (*Microwaves, *Dosimeters), (*Eye injuries, Microwaves).

The effects of microwave irradiation on optical activity are under investigation with the overall objective of developing a chemical dosimeter based on changing the optical activity of a compound with microwave irradiation. The initial phase of the study was to determine if microwave irradiation would in fact produce a change in the optical activity of a compound. Preliminary data indicate the presence of specific optical rotation changes as a result of microwave exposure, the optical activity being reduced in proportion to the amount of microwave exposure.

MISSOURI-SOURIS DEVELOPMENT AREA WATER POLLUTION INVESTIGATION.
Water pollution series.

Jan 52, 279p PHS-Pub-177, PHS-WPS-32
Prepared in cooperation with Minnesota State Dept. of Health, North Dakota State Dept. of Health, Montana State Board of Health, and South Dakota State Dept. of Health.

Descriptors: (*Missouri River Basin, *Water pollution), (*Souris River Basin, *Water pollution), (*Red River Basin, *Water pollution), (*North Dakota, Water pollution), (*Minnesota, Water pollution), (*Montana, Water pollution), South Dakota, Wyoming, Stream flow, Sources.

The Missouri-Souris portion of the land and water resources development program for the Missouri River Basin includes that reach of the Missouri River from below the mouth of Milk River in Montana to the mouth of Spring Creek, South Dakota, the Devils Lake Area, the James River Basin, and the United States portions of the Souris and Red River Basins. The plan calls for diversion of Missouri River water at strategic points for multipurpose use and to supplement available water in the Souris, Red, and James River Basins. This report covers the Missouri-Souris-Red area. The James River Basin will be presented in another report. Among the many contemplated water uses of the resource conservation plan are those for municipal, industrial, public health, sanitation and related purposes. In order to determine these needs, information is required on present water quantity and quality; and types, sources, and extent of pollution in streams of the region. A general section of the report deals with over-all water supply and water pollution problems pertinent to the area and includes survey methods, review of State Water Pollution Control Law, conclusions and recommendations. The major sub-basins are discussed in detail in separate sections of the report. Pertinent detail information, laboratory and flow data, and other presentations are included as appendixes.

SPOT TEST DETECTION AND SPECTROPHOTOMETRIC CHARACTERIZATION AND DETERMINATION OF CARBAZOLES WITH 3-METHYL-2-BENZOTHIAZOLONE HYDRAZONE, P-NITROSOPHENOL, AND FLUOROMETRIC METHODS. APPLICATION TO AIR POLLUTION,
Eugene Sawicki, Thomas R. Hauser, Thomas W. Stanley, Walter Elbert, and Frank T. Fox. 1960, 17p

Descriptors: (*Carbazoles, *Gas analysis), (*Spot tests, Carbazoles), (*Spectroscopic analysis, Carbazoles), Hydrazones, Nitroso compounds.
Identifiers: *Air pollution detection.

Carbazole has been detected in some airborne particulate samples. Two spectrophotometric methods for the determination of carbazole are introduced. Beer's law was obeyed from 4 to greater than 90 microgram of carbazole in the 3-methyl-2-benzothiazolone hydrazone and p-nitrosophenol procedures. Both methods can be used for the estimation of carbazole in the benzene extracts of airborne particulates. Two new spot tests for carbazole are also introduced. With the p-nitrosophenol test 0.4 microgram of carbazole can be detected. This test can be applied to air samples. In strongly alkaline solution 0.2 microgram of carbazole can be detected through the brilliant blue fluorescence of the anion.

THE COST OF DISPERSED FLOC NITRIFICATION AND DENTRIFICATION FOR REMOVAL OF NITROGEN FROM WASTEWATER,
Robert Smith. Nov 70, 11p

Descriptors: (*Sewage treatment, Chemical removal (Sewage treatment)), (*Nitrification, *Chemical removal (Sewage treatment)), Cost estimates.
Identifiers: *Dentrification.

Cost estimates have been made for nitrogen removal by means of nitrification and denitrification using two dispersed growth reactors in series. Preliminary cost data developed by Black and Veatch, under the terms of the FWQA contract, were used as a basis for the cost estimate. Cost estimates for nitrification alone were made using the same assumptions and the tables are attached.

STUDIES ON THE WASTES OF A NAVAL STORES PLANT.
Industrial waste survey rept. 5 Dec-15 Dec 50,
Virgial A. Minch, and Albert L. Platz. 1950, 45p

Descriptors: (*Wood products, *Industrial wastes), (*Water pollution, Wood products).
Identifiers: *Wood processing industry.

The study was undertaken as part of the Public Health Service program of industrial waste studies. A study was made of the stump washer effluent, and the main outfall and the various components that make up the plant effluent. Gulf Naval Stores Company operates 12 extractors to produce FF wood rosin, turpentine, pine oil and dipentent. The survey was conducted to determine the quantities and characteristics of process wastes resulting from the operation of a naval stores plant. Results of this work and similar studies will serve as basis for preparation of an industrial waste guide on naval stores wastes.

LOW-LEVEL LIQUID SCINTILLATION COUNTING OF ALPHA- AND BETA-EMITTING NUCLIDES,
A. A. Moghissi. 1970, 10p
Pub. in The Current Status of Liquid Scintillation Counting, p 86-94 1970.

Descriptors: (*Scintillation counters, Reviews), Alpha particle detectors, Beta particles.

The paper reviews the efforts of the Southeastern Radiological Health Laboratory in low-level counting by liquid scintillation. The author has dealt primarily with (3H) counting but have recognized that low-level counting of other radionuclides may be carried out advantageously by the same technique. All investigations reported here have been carried out using a Beckman liquid scintillation system except where specifically mentioned. There are a number of factors affecting the performance of low-level counting systems, and various attempts have been made to correlate these factors in a single formula. The major factors determining the sensitivity of a low-level counting system are background, efficiency, and sample size. Other factors, such as the requirements of time and skill for sample preparation, and the convenience of operation, are important but have relatively little effect on the sensitivity of the system.

RUNOFF AS A SOURCE OF PHOSPHATE IN THE WATERS OF STREAMS AND LAKES,
Harold A. Hall. 28 Apr 68, 11p

Descriptors: (*Water pollution, *Inorganic phosphates), (*Surface water runoff, Water pollution), Nutrients, Sources.
Identifiers: Path of pollutants.

The major sources of phosphate substances in surface waters are human wastes, synthetic detergents, certain industrial wastes, and runoff from agricultural and forest lands. The purpose of this paper is to discuss some of the factors which bring about various concentrations of phosphate substances in the runoff from rural areas (agricultural and forest land), present the results obtained in stream surveys, and estimate the contribution of phosphate from land runoff.

OPERATIONS RESEARCH IN WATER QUALITY MANAGEMENT.
Final rept.,
Harold A. Thomas, Jr., and Robert P. Burden. 15 Feb 63, 179p
Contract PH-86-62-140

Descriptors: (*River basin development, *Mathematical models), (*Water resources, *Operations research), Stream flow, Sewage treatment, Economic development.

New methods are reported for evaluating the composite effects of combinations of streamflow regulation, waste water treatment, and waste water regulation for application in comprehensive programs to improve and maintain the quality for water in major water resources systems. The objective is to show how these methods may be used to strengthen the rational base for river basin planning by use of mathematical systems analysis.

DEVELOPMENT OF DISSOLVED OXYGEN PROBE CLEANING APPARATUS,
Clifford L. Cole. Jun 67, 10p

Descriptors: (*Monitors, *Dissolved gases), (*Water pollution, Monitors), Design, Cleaning, Automation.

The Federal Water Pollution Control Administration operates a network of water pollution surveillance stations throughout the United States, consisting largely of automatic monitors emplaced on rivers and streams to record water quality changes throughout the year. The automatic monitors serve as a crucial information source in water quality management to protect desired water uses, particularly fish migration. During the critical period, the data must be keyed to weather and streamflow forecasts to allow management agencies to maintain water quality above minimum levels. The report describes the device which was developed to reduce the maintenance time and expense required for accurate water quality information from automatic monitors.

THE DISTRIBUTION OF RADIOACTIVITY FROM RAIN,
Lloyd R. Setter, and Conrad P. Straub. 1951, 27p
Presented at the American Geophysical Union Meeting, Washington, D.C., 29 Apr - 1 May 57.

Descriptors: (*Air pollution, Radioactive contaminants), (*Water pollution, Radioactive contaminants), (*Ohio River, *Radioactive contaminants), Correlations, Rainfall, Particles.
Identifiers: *Precipitation washout.

Fallout measurements, largely as precipitation, have been made on a continuous basis at Cincinnati, Ohio, since March 1953. The studies were implemented in October 1953 by weekly or daily tests of the atmospheric particulate activity and by the operation of an experimental cistern near the site of the rain collector. Correlation is made between air particle concentration and rainout (washout by precipitation) and distribution of activity between the separated solids and the supernatant liquid in the cistern liquid can be determined. The report includes data relating to activity levels in air particulates, rainfall, and certain Ohio rivers. (Author Modified Abstract)

AN ELECTROCHEMICAL METHOD FOR REMOVAL OF PHOSPHATES FROM WASTE WATERS,
Shafik E. Sadek. Feb 70, 53p
Contract DI-14-12-405
Paper copy available from GPO $0.50 as I67.13/4:17010-02/70.

Descriptors: (*Sewage treatment, Chemical removal (Sewage treatment)), (*Phosphorus, *Chemical removal (Sewage treatment)), Inorganic phosphates, Electrochemistry, Operating costs.

The report determines the effectiveness of an expendable electrode, direct current method for the removal of phosphates from the effluent of a secondary treatment process. The evaluation consists of measuring electrode and power consumption and phosphate removal as a function of voltage, electrode material (aluminum or iron), electrode spacing, and residence time. Batch tests were followed by continuous flow (steady-state) tests. A number of tests were run on raw sewage to evaluate the use of the system as a combined phosphate removal/bubble flotation operation.

Paul E. Morgan, and E. Robert Baumann. 15 Dec 65, 263p
Grant PHS-WP-00196
See also Progress rept. no. 2, dated 15 Dec 65, PB-217 270.

Descriptors: (*Diatomaceous earth, *Filter aids), (*Sewage filtration, Filter aids), (*Filtration, Filter aids), Nemerical analysis, Sand filtration.

The study was undertaken to determine the characteristics of municipal applications in which diatomite filters may be used successfully, to study the effect of various variables on filtration economy and effectiveness, and to outline a procedure for designing a plant to operate with maximum economy. Diatomite filtration equations were developed to predict the head loss-time relationship during a filter run by use of empirical filter cake resistance measurements. An equation was developed to predict filter cake resistance from measureable filtration variables. Empirical constants in the prediction equation were collected in pilot filter runs. A digital computer program was prepared to use the equations and cost information to optimize plant design.

Identifiers: *Water quality data.

As part of the Chesapeake Bay-Susquehanna River Basins Project, the Chesapeake Field Station (CFS), Middle Atlantic Region , Federal Water Pollution Control Administration (FWPCA) has undertaken a comprehensive water quality management study of the Potomac River Basin. Important phases of this study are the determination of the effects of wastewater discharges on water quality in the Potomac Estuary and the recommendation of a program to achieve the approved water quality standards for this interstate river. An essential part of the background investigation has been the compilation of a current inventory of all wastewater discharges in the Potomac River Basin.

VESSEL POLLUTION STUDY, SAN DIEGO BAY, CALIFORNIA.

Jun 69, 65p

Descriptors: (*San Diego Bay, *Water pollution), (*Ships, Water pollution), (*California, Water pollution), Naval ships.

A two-year study in San Diego Bay reveals that vessel waste discharges produce undesirable water quality conditions in areas of concentrated vessel activity. The study examined the effects of waste discharges representative of up to one-fourth of the U.S. Navy's entire active fleet, more than twenty-five hundred pleasure craft containing sanitary facilities, over a hundred ships of the West Coast commercial fishing fleet, and commercial freight vessels carrying in excess of a million tons of cargo to the Port of San Diego each year. Wastes discharged from these vessels were found to create conditions that are hazardous to health, aesthetically offensive and damaging to ecological balances in San Diego Bay. (Author)

STATE OF CONNECTICUT SHELLFISH ATLAS.
Feb 70, 109p CWT-10-12

Descriptors: (*Fishing grounds, Connecticut), (*Shellfish, *Connecticut), Atlases, Maps, New England, Estuaries.

The map collection represents the first phase of the Connecticut State Shellfish Atlas, which was designed to locate and identify the shellfish grounds in the estuarine waters of the State of Connecticut. Atlas-designated areas show only those grounds believed to support and produce shellfish of commercial and sport fisheries value and do not show historically productive but presently inactive shellfish areas. Of the leased grounds charted by the Connecticut State Shell Fish Commission, only the active portions were recorded. The coast of Connecticut includes varied species of shellfish but some in only limited numbers such as razor clams, mussels, soft clams, surf clams and ocean quahogs. These pockets of shellfish were not recorded due to their small size and limited value. Shellfish beds were located and identified in all waters regardless of classification: closed shellfish areas prohibiting harvesting, and open areas, as well as conditionally approved classifications.

AN APPRAISAL OF THE AIR RESOURCES OF METROPOLITAN BALTIMORE,
John M. Brown, and F. Donald Maddox. Jun 65, 111p SEC-TR-A65-33

Descriptors: (*Maryland, *Air pollution), Sources, Abatement.
Identifiers: *Baltimore (Maryland), *Air quality data.

The Baltimore metropolitan area, like all metropolitan areas in the United States, has experienced unprecedented growth in recent years. Such growth will be accompanied by multiplied problems of urban living. Among the continuing problems will be air pollution. Industrial emissions add to unsatisfactory levels of pollutants. The individual's automobile is part of one of the largest, most offensive groups of air pollution sources. At present, particulate pollutants are a problem. Sulfur dioxide levels have been reduced recently, but remain a potential problem. During summers, Los Angeles-type photochemical smog has appeared as indicated by hydrocarbon and oxidant levels measured. Higher nitrogen oxide and carbon monoxide levels can be expected in the future as a result of the lack of control of nitrogen oxide emissions and the anticipated increase in automobile use. Recommendations are set forth for effective control authority and regulations throughout the metropolitan area.

NIOBRARA RIVER BASIN (INCLUDING PONCA CREEK VALLEY) WATER POLLUTION INVESTIGATION.
Sep 50, 96p
Prepared in cooperation with Bureau of Reclamation, Region 7 and Water Pollution Control agencies of Nebraska, South Dakota, and Wyoming. Report dated Jan 51 on cover.

Descriptors: (*Niobrara River Basin, * /ater pollution), (*Nebraska, Water pollution), (*South Dakota, Water pollution).

The bureau of Reclamation believed it necessary that basin-wide studies of stream pollution be conducted to establish base data for use in planning maximum water utilization; to document the extent and nature of existing pollution; and to record general standards of water quality. Sanitary engineers detailed to the Lower Platte River Basin Study by the Nebraska State Health Department and the Public Health Service included the Niobrara River Basin and Ponca Creek Valley in their investigations. A mobile laboratory unit was moved to Ainsworth, Nebraska, in the Niobrara River Basin, June 8, 1949. The report contains reviews of State water pollution control laws, laboratory results, presentation of data, discussion, conclusions and recommendations. An appendix is included for individual laboratory and flow data.

EFFICIENCY STUDY OF THE DISTRICT OF COLUMBIA WATER POLLUTION CONTROL PLANT.
Feb 67, 20p CB-SRBP-Working Document-7

Descriptors: (*District of Columbia, *Sewage treatment), Chemical composition, Outfalls.
Identifiers: Sewage treatment effluents.

An operational efficiency study of the District of Columbia Water Pollution Control Plant was made on November 9, 10, and 11, 1966. The purpose of the study was to verify the results of a daily composite sampling program carried out by the District of Columbia Department of Sanitary Engineering in order to establish the reliability of this data as input to a mathematical model of the Potomac Estuary. Total phosphates were also measured in order to determine the operational efficiency of a conventionally operated, large activated sludge plant in removing this nutrient.

TREATMENT OF HIGH NITRATE WATERS,
Percy P. St. Amant, and Perry L. McCarty. 1969, 19p
Presented at the Annual Conference, American Water Works Association (89th), San Diego, Calif. 21 May 69.

Descriptors: (*Water treatment, Chemical removal (Water treatment)), (*Chemical removal (Water treatment), *Inorganic nitrates), Anaerobic processes, Pilot plants.
Identifiers: Return flow, *Denitrification.

The U.S. Public Health Service Drinking Water Standards of 1962 recommend that nitrates in drinking water be limited to 45 milligrams per liter. This limit has been set because of the association of high nitrates in water with the incidents of methemoglobinemia in infants. The results of investigations on the removal of nitrates from irrigation return waters in the San Joaquin Valley in California have indicated that biological denitrification may be an economically feasible way to remove nitrates. The purpose has been to develop methods to control the discharge of undesirable quantities of nitrates into the San Francisco Bay System rather than to develop a process for nitrate removal from a municipal water supply. However, of the several processes studied, biological denitrification in filter beds has proved to have the stability and efficiency of operation that would be necessary for treatment of a drinking water supply. The paper contains a summary of the pilot-plant studies which were conducted to estimate chemical requirements, to evaluate possible filter media, and to determine the important operating parameters.

MACROINVERTIBRATE COLLECTIONS AND WATER QUALITY MONITORING IN THE OHIO RIVER BASIN, 1963 - 1967.
William T. Mason, Jr., Philip A. Lewis, and J. B. Anderson. Mar 71, 224p

Descriptors: (*Ohio River Basin, *Biological surveys), (*Water pollution, Ohio River Basin), Invertebrates, Seasonal variations.
Identifiers: *Water pollution effects (Animals).

Macroinvertebrate populations were sampled at fourteen Ohio River and tributary stations over a five year period, 1963-1967. Selected physical and chemical surveillance data were related to biological quality. Ohio River stations included; Pittsburgh, Pennsylvania, Toronto, Marietta and Addison, Ohio, Huntington, West Virginia, Cincinnati, Ohio, Louisville, Kentucky, Evansville, Indiana and Cairo, Illinois. Population characteristics and trends in cyclic periods of abundance of certain species at the stations were found to be of utmost importance in evaluating effects of pollution on macroinvertebrates. THE RESISTANCE OF TUBIFICID WORMS TO THREE COMMON POLLUTANTS,
L. Stephen Whitley. 29 May 67, 15p
Grant PHS-WP-00937-02
Pub. in Separatum Vol 32 Fasc 1-2, 19 Aug 68.

Descriptors: (*Worms, *Water pollution), (*Aquatic animals, Worms), Tolerances (Physiology), Metals, Lead (Metals), Zinc, Ecology, Physiology.
Identifiers: *Tubificidae, Tubifex tubifex, Limnodrilus hoffmeisteri, Pentachlorophenal, *Water pollution effects (Animals).

The family Tubificidae are characterized as 'small aquatic worms, up to 200 mm in length, with setae in four bundles per segment, with usually an interminate number of setae per bundle.' The family Tubificidae according to present systematic studies contains approximately eighteen genera. Representatives of two of the genera, Limnodrilus and Tubifex are the most commonly found types. Tubificids have a reputation for resistance to pollutants. The common name of 'sludge worms' attest to that. However, no quantitative work on the extent of this resistance has been carried out. For a term such as 'tolerant' to have meaning, some quantification must be carried out under standard laboratory procedures. This report presents some data from such procedures and is an attempt to quantify the tolerance of tubificid worms to three common types of pollutants, the metals, lead and

zinc and the wood preservative, sodium pentochlorophenol.

PERFORMANCE TESTS FOR PLATE HEAT EXCHANGERS USED FOR ULTRA-HIGH-TEMPERATURE PASTEURIZATION PROCESSES,
R. W. Dickerson Jr., R. B. Read Jr., and H. E. Thompson Jr. 1968, 21p PHS-999-UIH-12

Descriptors: (*Pasteurizing, *Heat exchangers), (*Milk, Pasteurizing).

Most of the tests employed to measure the performance of ultra-high-temperature pasteurizers are the same as those used for high-temperature, short-time pasteurizers; the only changes are in the procedures for measuring holding time and the speed of response of the control system. Methods for measuring holding time and control response time are presented in the same format as those recommended in the Public Health Service's Grade 'A' Pasteurized Milk Ordinance. (Author)

REPORT ON PROPOSED STREAM POLLUTION STUDIES OF THE KANSAS RIVER WITH RECOMMENDATIONS ON THE PROCEDURE TO BE ADOPTED,
H. H. Wagenhals. Nov 21, 9p

Descriptors: (*Kansas River, *Water pollution.

The report concerns a study of the Kansas River and its tributaries to ascertain their condition, the effect of the sewage being discharged into them at the present time, their probable capacity to receive sewage with due regard to the rights of cities desiring to use it as a source of water supply, and the extent of sewage treatment required to maintain the rivers in proper condition for their use as a water supply.

ROLLING MILLS: AN INDUSTRIAL WASTE GUIDE TO STEEL ROLLING MILLS.
1951, 63p

Descriptors: (*Rolling mills, *Industrial wastes), (*Iron and steel industry, Water pollution), (*Water pollution, Industrial wastes), Pickling compositions, Iron, Scale (Corrosion), Oils, Acidity, Metal finishing.

Liquid industrial wastes of the rolling operations are roll-cooling water, descaling water, and waste pickle liquor. The principal pollutional features of these wastes are suspended solids, oil, grease, acid, and soluble iron. The suspended solids are fine particles of iron oxide (mill scale) which are removed from the surface of the product in the process. A description is presented of the processes with emphasis on operations producing liquid wastes is presented. Information on the volume and character of the wastes is given. Measures which remedy or abate the liquid waste problems of the industry are discussed.

EMERGENCY REUSE OF WATER AT CHANUTE, KANSAS, 1956-57,
Dwight F. Metzler, Rullell L. Culp, Richard L. Woodward, Graham Walton, and Shih Lu Chang. 1957, 70p

Descriptors: (*Sewage treatment, *Water reclamation), Water supply, Potable water, Kansas.
Identifiers: *Chanute (Kansas).

From October, 1956 to March, 1957 the City of Chanute, Kansas, (population 12,000) faced with a critical water shortage, resorted to use of its sewage as a source of water supply. The paper reports on the treatment methods used, some of the problems which arose, and the water quality studies which were made during the period of water recirculation. No adverse effects on the health of the people were noted but much of the population used other sources of drinking water because of the various objectionable characteristics of the public supply. MERAMEC RIVER BASIN: A COMPREHENSIVE WATER POLLUTION CONTROL PROGRAM.

1957, 11p PHS-Pub-553 WP-72

Descriptors: (*Meramec River Basin, *Water pollution), (*Missouri, Water pollution).

The report summarizes the 'Comprehensive Water Pollution Control Program for the Meramec River Drainage Basin' as developed by the Missouri Division of Health and the Public Health Service of the U.S. Department of Health, Education, and Welfare. The program gives full consideration to the several present uses and to the reasonably anticipated future uses of the waters of the basin. It provides an equitable balance in the pollution control requirements for various private and public groups concerned. This program is based on beneficial water uses and related conditions that prevailed on July 1, 1956.

REPORT ON POLLUTION OF THE HUDSON RIVER AND ITS TRIBUTARIES.
Sep 65, 100p
Errata sheet inserted.

Descriptors: (*Hudson River Basin, *Water pollution), (*New York, Water pollution).

The Hudson River has served as a major resource for the population centers along its shores, providing water supply, an abundant fishery, waterborne commerce, a place for recreation and the simple amenity of being by the river side. The survival of New York City, the surrounding metropolitan areas, and the urban areas upstream, depends upon the restoration and the preservation of these most vital water uses. The area covered in this report is the Hudson River and its tributaries from the Federal dam at Troy to the Narrows in New York City. The contents include: Description of area; Water uses; Classification and status of programs; Sources of waste; Effects of pollution on water quality and uses; New York State classes and quality standards applicable to designated waters; Interstate sanitation commission classes and quality standards applicable to designated waters; Status of discharges in New York State area of the Hudson River as reported by New York State Health Department; and Pollution trends in the Hudson River at a point below Poughkeepsie, N.Y. Water Pollution Surveillance Station No. 18.

MORPHOLOGY OF DIAGNOSTIC STAGES OF INTESTINAL PARASITES.
Dorothy M. Melvin, and M. M. Brooke. Jun 69, 31p PHS-Pub-1966

Descriptors: (*Parasites, *Intestines), Life cycles, Diagnosis, Morphology, Protozoa, Worms, Medical laboratories, Tests.

The diagnostic stages of intestinal parasites are differentiated on the basis of specific morphologic features which can be seen microscopically. Some of the parasites listed occur only infrequently or accidentally in man; but, since their diagnostic stages may be confused with those of the more common organisms, they have been included here. For example, Entamoeba polecki is rarely found in human feces; however, it closely resembles Entamoeba histolytica and Entamoeba coli, and microscopists unaware of its existence may mistake it for these species. Likewise, several helminth species of lower animals which occasionally parasitize man are included. The diagnostic stages may be misidentified. For example, Trichostrongylus (Nematode) eggs may be confused with hookworm eggs, and Hymenolepis diminuta (Cestode) eggs may be confused with Hymenolepis nana eggs.

THE POTOMAC ESTUARY MATHEMATICAL MODEL.
Technical rept. no. 7,
Leo J. Hetling, Johan A. Aalto, Norbert A. Jaworski, and Donald W. Lear, Jr. Mar 69, 24p

Descriptors: (*Potomac Estuary, *Mathematical models), Chemical composition, Hydrography.

A systems analysis approach has been undertaken in investigating the water quality responses in the Potomac River Basin. The analyses included the effects of low flow augmentation, wastewater diversions, water supply withdrawals, and increased degrees of wastewater treatment on water quality in the upper estuary. Several techniques or mathematical models capable of simulating the response of water quality in an estuary were available when the study of the Potomac Estuary was undertaken in 1965. After an investigation of the modeling systems available, the segmented estuary model developed by Dr. Robert Thomann was selected as the one which most closely conformed to the requirements of the study. It discusses the verification and uses of this model.

PROCEDURES MANUAL. DETROIT RIVER--LAKE ERIE PROJECT FIELD OPERATIONS SECTION. SECTION I. PROCEDURES FOR SAMPLING AND HYDROLOGY. SECTION II. STORM WATER OVERFLOW AND DOMESTIC WASTE SURVEYS. BIOLOGICAL STUDIES,
Richard D. Vaughan. 1964, 178p
See also PB-215 856.

Descriptors: (*Detroit River, *Water pollution), (*Lake Erie Basin, *Water pollution), Michigan, Sewage.
Identifiers: Sewage treatment effluent, Storm water runoff.

The objective of the Project was to determine strengths of known sources of wastes and to obtain an accurate picture of quality at any point in the waters under study. A large number of samples were collected and analyzed to yield the physical, chemical, and bactericlogical data necessary to evaluate the waste loading and water quality. A system of sampling was set up to gather data from the Detroit River and tributaries, Michigan part of Lake Erie, beaches, industrial outfalls, and municipal outfalls. Section II presents comprehensive surveys of the six major sewage treatment plants in the Project's study area. These were carried out at various times throughout the summer and fall in cooperation with the Michigan Department of Health to determine the waste loads to the river at different seasons of the year. The plants surveyed were Belle Isle, Detroit, Grosse Ile (Potawatamee Woods Subdivision), Monroe, Trenton, and Wyandotte. (Author)

METHODOLOGY FOR ECONOMIC EVALUATION OF MUNICIPAL WATER SUPPLY/WASTEWATER DISPOSAL INCLUDING CONSIDERATIONS OF SEAWATER DISTILLATION AND WASTEWATER RENOVATION.
Final rept.

Aug 70, 118p
Contract SD-70-2, DI-14-01-0001-2161

Descriptors: (*Desalting, Water supply), (*Sewage treatment, *Urban planning), (*Water treatment, *Urban planning), (*Water supply, Sources), Mathematical models, Cost analysis, Water reclamation.
Identifiers: Waste water reuse.

The report incorporates the results of an investigation to develop computational procedures for determining least-cost water supply and wastewater disposal systems for metropolitan areas. Special attention was given to seawater distillation and wastewater renovation in such determinations. The feasibility of the computational procedure (a mathematical model) was tested by application to a hypothetical coastal city.

WATER RESOURCES STUDY LEE CREEK BASIN ARKANSAS AND OKLAHOMA. STUDY OF POTENTIAL NEEDS AND VALUE OF WATER STORAGE FOR MUNICIPAL, INDUSTRIAL AND QUALITY CONTROL PURPOSES.

Aug 64, 42p

Descriptors: (*Lee Creek Basin, *Reservoirs), (*Arkansas, *Water resources), (*Oklahoma, *Water resources), Forecasting.

The report presents the results of an investigation to determine water requirements for municipal and industrial purposes in the area that could be served by the water resources of Lee Creek. Also investigated was the need for and the value of storage for streamflow regulation for water quality control in the Lee Creek study area. Benefits derived from a Federally constructed reservoir to provide for water needs for a 100-year period have been considered.

SAN JOAQUIN MASTER DRAIN. EFFECTS ON WATER QUALITY OF SAN FRANCISCO BAY AND DELTA. APPENDIX PART C. NUTRIENTS AND BIOLOGICAL RESPONSE,
Richard C. Bain, Jr., Herbert E. Pintler, Albert Katko, and Robert F. Minnehan. Aug 68, 162p
Report on Central Pacific Basins Project.

Descriptors: (*San Francisco Bay, *Water pollution), (*San Joaquin River, *Water pollution), Drains, Nutrients, Nitrogen, Phosphorus, Silicon dioxide, Phytoplankton, Agricultural wastes, Fresh water fishes, California.
Identifiers: *Water pollution effects (Plants), *Water pollution effects (Animals).

A federal drain (The San Luis Drain) is currently contemplated in the San Joaquin Valley for the purpose of collecting and transporting highly saline agricultural drainage waters to a disposal point in the Sacramento - San Joaquin Delta near the City of Antioch. The effect of the drain on the quality of the Bay and Delta waters was studied. The future fifty year period, 1970-2020, was examined. The scope of this part of the Appendix is limited to description of effects related to nutrient enrichment of the San Francisco Bay-Delta system including effects on fishery, recreation and shoreline real estate values. Material is presented describing laboratory and field studies, literature surveys on fishery resources and water quality requirements, Bay-Delta water quality and biota, and predictive models leading to economic evaluations.

FUTURE MUNICIPAL AND INDUSTRIAL WATER REQUIREMENTS QUALITY AND RETURN FLOW ASPECTS IN THE NECHES, TRINITY, SAN JACINTO, BRAZOS, COLORADO, GUADALUPE, SAN ANTONIO, AND NUECES RIVER BASINS.

Jan 62, 125p Work Assignment-33

Descriptors: (*Neches River Basin, *Water pollution), (*Trinity River Basin, *Water pollution), (*San Jacinto River Basin, *Water pollution), (*Brazos River Basin, *Water pollution), (*Colorado River Basin, *Water pollution), (*Guadalupe River Basin, *Water pollution), (*San Antonio River Basin, *Water pollution), (*Nueces River Basin, *Water pollution), (*Texas, Water pollution), Forecasting.

The report describes the future quality of water for the year 2010 in the United States Study Commission - Texas area and determines the amounts of augmentation water required to maintain the water quality criteria adopted by the Commission. The report is to serve as a guide in determining and locating points and reaches in the eight river basins under study that may need water for water quality control. This report does not specify sources of water to be used for quality control. The study and analysis of the river basins and adjoining areas show a total need of 827,920 acre-feet of augmentation water to control the deficiency in dissolved oxygen.

Report on Weisner River Basin Project for Water Supply and Quality Control Study.

Descriptors: (*Weisner River Basin, *Reservoirs), (*Idaho, *Water resources), Forecasting.
Identifiers: Washington County (Idaho), Adams County (Idaho).

The investigation was undertaken by the Federal Water Pollution Control Administration to determine the potential need for municipal and industrial water supply and the need for and value of storage in the proposed Southwest Idaho Water Development Project, Weisner River Division, Council and Main Weiser Units, Idaho, for water quality control. Water requirements were examined for areas within Washington and Adams Counties, Idaho. Future needs were projected to the year 1980, 2000, and 2020. An economic base study and forecast of future population and industrial growth was prepared for this purpose and is summarized in this report.

THE AIR POLLUTION PROBLEM IN PORTLAND, OREGON. REPORT TO THE PORTLAND BUREAU OF HEALTH,
Jean J. Schueneman. Sep 56, 26p

Descriptors: (*Oregon, *Air pollution).
Identifiers: *Portland (Oregon).

There is a feeling of concern in the City of Portland as to the general status of the atmospheric resources of the City and what, if any, additional action is warranted on the part of the City Government with regard to this important part of the public domain. This feeling was evidenced by a request by the Health Officer of the City, endorsed by the State Health Officer, that the public Health Service provide technical advice to enable Portland to coordinate present activities and to develop a logical plan for air pollution control. The report discusses this survey.

VESSEL POLLUTION STUDY SAN DIEGO BAY, CALIFORNIA.
Jun 69, 67p

Descriptors: (*Ships, Water pollution), (*San Diego Bay, *Water pollution), (*California, Water pollution), Naval ships.

A two-year study in San Diego Bay reveals that vessel waste discharges produce undesirable water quality conditions in areas of concentrated vessel activity. The study examined the effects of waste discharges representative of up to one-fourth of the U.S. Navy's entire active fleet, more than twenty-five hundred pleasure craft containing sanitary facilities, over a hundred ships of the West Coast commercail fishing fleet, and commercial freight vessels carrying in excess of a million tons of cargo to the Port of San Diego each year. Wastes discharged from these vessels were found to create conditions that are hazardous to health, aesthetically offensive and damaging to ecological balances in San Diego Bay. (Author)

CHEMICAL ASPECTS OF H2S REMOVAL IN SOIL.
Doctorial thesis,
Robert Clark Gumerman. 1968, 116p
Grant FWPCA-WP-883-03

Descriptors: (*Odor control, Hydrogen sulfide), (*Air pollution, Hydrogen sulfide), (*Soils, *Adsorbents).
Identifiers: *Air pollution control.

Recent applications of a relatively new soil treatment process for the elimination of gaseous malodors emanating from water quality control operations are noted. The study was directed toward an investigation of the chemical aspects of H2S removal by both moist and dry sterile soils. Batch scale tests were utilized to study the effect of temperature on removal efficiency, the ability of a soil to be rejunenated, the desirability of certain common cations in the soil, and selection of an easily measured soil property or characteristic which relates the H2S removal capacity of different soils.

A COMPREHENSIVE PROGRAM FOR WATER POLLUTION CONTROL FOR THE MINNESOTA RIVER BASIN DEVELOPED BY THE STATE WATER POLLUTION CONTROL AGENCIES OF IOWA, MINNESOTA, AND SOUTH DAKOTA.
Water pollution series.

1954, 30P PHS-Pub-365, PHS-WPS-64

Descriptors: (*Minnesota River Basin, *Water pollution), (*Iowa, Water pollution), (*Minnesota, Water pollution), (*South Dakota, Water pollution).

The report, prepared in cooperation with the water pollution control agencies of Iowa, Minnesota, and South Dakota, sets forth the water pollution control program being followed by the respective States in the Minnesota River Basin. This program, which is based on data available as of January 1, 1954, was developed after a thorough consideration of the existing and potential uses of the water resources in the basin; the pollution entering the streams and the resulting damages; the benefits which may result from pollution prevention and abatement; and the prevention measures now in effect as well as those which are needed.

MASSACHUSETTS PESTICIDE MONITORING STUDY.
Progress rept. no. 3, 15 Jun 67-14 Jun 68,
Lee D. Lyman, William A. Tompkins, and James A. McCann. 1968, 31p
Grant WPD-88-02-67

Descriptors: (*Water pollution, *Pesticides), (*Massachusetts, Water pollution), Fresh water fishes, DDT, Accumulation, Insecticides.
Identifiers: DDE pesticide, *Pesticide residues.

Indigenous fresh water fish species were collected in all of the major watersheds in Massachusetts during the summers of 1965, 1966, and 1967 and an individual analysis of these fish conducted to determine the concentrations of DDT and metabolites, DDE and DDD (TDE). In all, 1,310 individual fish specimens were collected and analyzed from 93 stations. Mean DDT concentrations based on the analysis of five fish per station ranged from 0.17 to 28.88 parts per million. A study of factors relating to the concentration of pesticide by fish showed that some fish species had varying abilities to concentrate DDT. Results of this study are expressed in parts per million of pesticide found in whole fish and based on dry weight. Conversion factors to convert parts per million based on dry weight to parts per million based on wet weight were determined for nine species of fish. (Author)

WATER AND SEWER BOND SALES IN THE UNITED STATES.

1960, 13p

Descriptors: (*Sewage treatment, *Financing), (*Water treatment, *Financing), Tables (Data).
Identifiers: *Bonds.

The tables supplement the annual publication of contract award data, last reported in Sewage and Water Works Construction 1960. The basic information from which these tables were developed was obtained from the Investment Bankers Association by special arrangement. Data are presented in three categories according to the use of the proceeds from the sale: (1) WATER when the bonds have been sold to finance water facilities; (2) SEWER, to finance sewage facilities; and (3) COMBINATION, to finance jointly water and sewage facilities where the portions attributable to each type are not designated. These data describe only those sales reported to the Investment Bankers Association or assembled by that Association from available documents.

1965, 14p FWPCA-WP-16

Descriptors: (*Sewage treatment, *Financing), (*Water treatment, *Financing), Tables (Data).
Identifiers: *Bonds.

The report contains data which are basic and necessary to the orderly and efficient management of water supply and pollution control programs. The tables supplement the annual publication of contract award data, last reported in Sewage and Water Works Construction 1965. Data are presented in three categories according to the use of the proceeds from the sale: (1) WATER when the bonds have been sold to finance water facilities; (2) SEWER, to finance sewage facilities; and (3) COMBINATION, to finance jointly water and sewage facilities where the portions attributable to each type are not designated. These data describe only those sales reported to the Investment Bankers Association or assembled by that Association from available documents.

WATER AND SEWER BOND SALES IN THE UNITED STATES.
Rept. for Jan-Dec 63.

1963, 13P PHS-Pub-965-Ed-63

Descriptors: (*Sewage treatment, *Financing), (*Water treatment, *Financing), Inventories, Tables (Data).
Identifiers: *Bonds.

The report of Water and Sewer Bond Sales in the United States contains data which are basic and necessary to the orderly and efficient management of water supply and pollution control programs. The tables supplement the annual publication of contract award data, last reported in Sewage and Water Works Construction 1963. (PHS Publication No. 758.) Similar tables which describe bonds sold between July 1956 and December 1962 are available. The basic information from which these tables were developed was obtained from the Investment Bankers Association by special arrangement. Data are presented in three categories according to the use of the proceeds from the sale: (1) WATER when the bonds have been sold to finance water facilities; (2) SEWER, to finance sewage facilities; and (3) COMBINATION, to finance jointly water and sewage facilities where the portions attributable to each type are not designated. These data describe only those sales reported to the Investment Bankers Association or assembled by that Association from available documents.

A REPORT OF WATER POLLUTION IN THE SOUTH PLATTE RIVER BASIN. A COOPERATIVE STATE-FEDERAL REPORT ON WATER POLLUTION.
Water pollution series rept.

Feb 53, 60p PHS-Pub-235, PHS-WPS-39
Prepared in cooperation with Colorado Dept. of Public Health, Nebraska Dept. of Public Health and the Wyoming Dept. of Public Health.

Descriptors: (*Platte River Basin, *Water pollution), (*Colorado, Water pollution), (*Wyoming, Water pollution), (*Nebraska, Water pollution).

This report is produced under the cosponsorship of the Colorado Department of Public Health, the Nebraska Department of Health, and the Wyoming Department of Public Health, and the U. S. Public Health Service. It is based on data gathered and reported in the South Platte River Basin Water Pollution Investigation Report of 1950 and subsequent information. The report also presents information concerning use of water resources, pollution entering water resources and resulting damages, benefits which may result from pollution prevention and abatement, pollution prevention measures in effect and those needed. Data and knowledge now available are sufficient to permit the immediate solution of most of the pollution problems within the South Platte River Basin without awaiting the results of additional surveys and studies. A sincere effort has been made to present a fair picture of the water pollution problems in the South Platte River Basin and to present reasonable conclusions and recommendations. A COMPREHENSIVE WATER POLLUTION CONTROL PROGRAM FOR THE MISSISSIPPI--IOWA-CEDAR RIVERS BASIN DEVELOPED BY THE STATE WATER POLLUTION CONTROL AGENCIES OF ILLINOIS, IOWA, AND MINNESOTA.
Water pollution series.
1954, 43P PHS-Pub-346, PHS-WPS-61

Descriptors: (*Mississippi River Basin, *Water pollution), (*Cedar River Basin, *Water pollution), (*Iowa River Basin, *Water pollution), (*Iowa, Water pollution), (*Illinois, Water pollution), (*Minnesota, Water pollution).

The report contains the comprehensive water pollution control program for the Mississippi-Iowa-Cedar Rivers Basin of the Iowa State Department of Health, Illinois Sanitary Water Board, and the Minnesota State Department of Health. The program gives full consideration to the several present uses and to the reasonably anticipated future uses of the waters of this basin. It provides an equitable balance in the pollution control requirements for various private and public groups concerned.

SUMMARY ECONOMIC BASE STUDY CHESAPEAKE BAY DRAINAGE BASINS.
Feb 67, 165p
Contract PH-86-63-92
Includes errata sheet.

Descriptors: (*Chesapeake Bay Basin, *Economic development), New York, Delaware, Pennsylvania, Demography, District of Columbia, Virginia, North Carolina, Forecasting.

The report is designed to provide economic and demographic information useful to water resources planning for the Chesapeake Bay-Susquehanna River Basins. The information includes historical and projected estimates of population, labor force, employment by industry group, income and related measures. The historical years shown in this report are 1950 and 1960; the projections are presented for each decadal year between 1970 and 2020. The areas for which projections are presented include the nation, the six-state area in which the River Basins are located, each of the separate River Basins, subregions within each Basin as defined by economic criteria, regions within each Basin as defined by hydrologic criteria, and countries within each subregion.

EUTECTIC FREEZING AND HYDRATING FOR WASTE WATER RENOVATION.
Final rept.,

Robert L. Powell, Pei-Chi Chang, Kenneth R. Murphy, Myrton C. Rand, and Allen J. Barduhn.
Jun 64, 81p SURI-Ch.E-1033-6310A1
Contract PH-86-63-38

Descriptors: (*Sewage treatment, *Freezing), (*Hydration, Sewage treatment), Eutectics.
Identifiers: *Tertiary sewage treatment.

Discussed is a new process of concentrating the dissolved inorganic and organic contaminents in the waste stream from a tertiary treatment process by eutectic freezing or hydrating. In this process a substantial fraction of the water (93 to 98%) is first removed by any means such as freezing, hydrating, evaporation, or reverse osmosis. The remaining 2 to 7% of the waste, which presumably contains all or most of the original dissolved material, is subjected to temperatures low enough to precipitate ice and the majority of the organics and inorganic salts simultaneously. The report is a description of the work accomplished during the period June 1962 to February 1964 in checking certain key assumptions made in designing the eutectic process on paper and also in observing the behavior of waste water samples subjected to concentration by freezing.

PRESENT TECHNOLOGY OF SLUDGE DEWATERING,
James E. Smith, Jr. Oct 70, 28p

Descriptors: (*Sludge dewatering, *Reviews), (*Sludge disposal, Reviews).
Identifiers: Sludge treatment, *Solid waste disposal.

A review of problems confronted in disposing sludges from water purification and municipal wastewater treatment plants is presented. The quantities and characteristics of these sludges that must be dealt with are enumerated. Each of a variety of biological, chemical and physical treatment alternatives is discussed. This includes the optimization of the aerobic stabilization process, the use of organic polymers and various inorganic additives including iron and aluminum salts, and sludge incinerator ash on sludge filtration and thickening. Pasteurization is also discussed. Land spreading, strip mine reclamation, landfill, ocean disposal, and pipeline transport are discussed. The present economics of some processes are noted. (Autho-)

A STUDY OF SOLID WASTE COLLECTION SYSTEMS COMPARING ONE-MAN WITH MULTI-MAN CREWS.
Final rept.
1969, 200P BSWM-SW-9c, PHS-1892
Contract PH-86-67-248

Descriptors: (*Waste disposal, *Collecting methods), (*Refuse disposal, Collecting methods), (*Manpower, Waste disposal), Requirements.
Identifiers: *Solid waste disposal.

The report summarizes research into the relative functional and cost efficiencies of the one-man crew when compared to alternative two- or three-man crews for the collection of refuse. Four basic analytical techniques were used: comprehensive field surveys; nationwide survey data analysis; time-motion studies; and a mathematical model. The comprehensive field surveys were applied to four municipal collection systems and two private-firm collection systems. The time-motion studies compared field times in three cities with Methods-Time-Measurement values developed under controlled laboratory conditions. A mathematical model was designed to permit simulation of the refuse collection system. The model is a formula which expresses the interrelationships among the variables affecting collection time and system cost. Tables and charts have been prepared to support and illustrate the information developed, and the conclusions and recommendations which have been based thereon. (Author Modified Abstract)

STATEMENT: WATER QUALITY MANAGEMENT AND POLLUTION CONTROL PROGRAM IN IOWA, KANSAS, MISSOURI, AND NEBRASKA. VOLUME II. APPENDIX A MISSOURI WATER RESOURCES APPENDIX B - WATER QUALITY AND BASIC DATA.

May 64, 370p
Presented before the Natural Resources and Power Subcommittee of the House Committee on Government Operations, Kansis City, Missouri on 22-23 May 1964.

Descriptors: (*Kansas, *Water resources), (*Iowa, *Water resources), (*Missouri, *Water resources), (*Nebraska, Water resources), (*Reservoirs, Water resources), Forecasting.

The purpose of the study was to determine the need for and value of storage for municipal and industrial water supply and water quality control. The studies cover water storage needs and values during the study periods, usually 50 or 100 years. The present and future needs for water storage for streamflow regulation for quality control are estimated. The present needs are based on uncontrolled streamflows, organic and inorganic concentrations and other miscellaneous factors. Economic projections, water quality, and prospective legitimate water uses are used in estimating future needs for streamflow regulation for quality control. The preceding statements are from water resource reports of studies made in the Four-State area of Iowa, Kansas, Missouri and Nebraska.

AN EXPERIMENT TO DETERMINE THE RELATION BETWEEN DISSOLVED OXYGEN CHANGE IN PIPELINE FLOW AND REYNOLDS NUMBER.
National water quality network applications and development rept. no. 8,
Harry Stierli, John D. Weeks, and Ross A. Buck.
Dec 63, 23p

Descriptors: (*Dissolved gases, *Water pipelines), Oxygen.

Under certain flow conditions, there can be a significant change in the amount of dissolved oxygen as water travels from a pump intake through piping to a discharge point in a field station. The experiment obtains data that will help to establish operating conditions for satisfactory water sampling. For practical reasons, the experiment was divided into two parts. The first was to measure temperature, dissolved oxygen concentration, and conductivity of the Little Miami River in cross-section. The second part was to measure dissolved oxygen changes in intake and discharge samples with different pipeline flow conditions The primary objective was to determine a Reynolds number that would permit satisfactory operation.

NATIONAL WATER QUALITY NETWORK APPLICATIONS AND DEVELOPMENT REPORT. 6. EVALUATION OF THE FIELD PERFORMANCE OF A HAYS DISSOLVED OXYGEN ANALYZER,
John D. Weeks. Oct 62, 40p

Descriptors: (*Water analysis, *Dissolved gases), Water pollution, Oxygen, Partial pressure.
Identifiers: *Water pollution detection.

The Hays Dissolved Oxygen Analyzer was operated at the Little Miami River Field Test Station of the National Water Quality Network from July 17, 1962, to September 27, 1962. This evaluation was undertaken in order to determine if the instrument is suitable for utilization in the National Water Quality Network's field activities.

REMOVAL OF NITROGEN FROM TILE DRAINAGE.
Summary rept.,
Randall L. Brown. May 71, 40p DWR-174-9 EPA-WQO-13030-ELY-5/71-6, REC-R2-71-6
Contract DI-14-06-200-3389A
Report on Bio-Engineering Aspects of Agricultural Drainage, San Joaquin Valley, California.
Paper copy available from GPO $0.50 as EP1.16:13030-ELY-5/71-6.

Descriptors: (*Tile drains, Water treatment), (*Nitrogen, *Chemical removal (Water treatment)), Algae, Harvesting, Irrigation, Desalting, Subsurface drainage.
Identifiers: *Water pollution control, *Denitrification.

Studies by an interagency group have shown that it is technically feasible to reduce 20 mg/l nitrate-nitrogen in agricultural tile drainage to 2-5 mg/l by either algae stripping or bacterial denitrification. Conditions necessary for maximum algal growth included 8- to 12-inch pond depth, addition of small amounts of nutrients (CO_2, Fe, and P), up to four hours of daily mixing and detention times of from 5 to 16 days, depending on the season. Bacterial denitrification was tested in anaerobic deep ponds and filters using methanol as a carbon source. Required detention times were on the order of 8 to 30 days for covered ponds and 1 to 2 hours for filters. During long-term operation of the filters periodic flushing was required to remove accumulated bacterial biomass. Two desalination processes were also studied -- electrodialysis and reverse osmosis. SUMMARY REPORT FOR THE CONFERENCE ON POLLUTION OF RARITAN BAY AND ADJACENT INTERSTATE WATERS. THIRD SESSION.

May 67, 25p
See also PB-218 089 and PB-218 090.

Descriptors: (*Raritan Bay, *Water pollution), (*New York, Water pollution), (*New Jersey, Water pollution), Proceedings, Sewage.
Identifiers: Sewage treatment effluent.

The primary cause of pollution of the eastern section of Raritan Bay is the transfer of untreated and inadequately treated wastes from Upper Bay through the Narrows. The major cause of pollution of the western section is the direct discharge of raw and inadequately treated municipal wastes. Additional pollution in the western section results from the interchange of these waters with the polluted Raritan River and Arthur Kill. Plans or construction are underway for improved wastes treatment facilities for a number of sources in the area. These problems are discussed.

WATER QUALITY CONTROL STUDY SUN--TETON UNIT MONTANA. STUDY OF POTENTIAL NEEDS AND VALUE OF WATER FOR THE PURPOSE OF WATER QUALITY CONTROL OF THE SUN-TETON UNIT, MONTANA.

Jul 66, 45p

Descriptors: (*Sun River Basin, *Reservoirs), (*Montana, *Water resources), (*Teton River Basin, *Reservoirs), Forecasting.

The general objectives of this study are (1) to assess the effects of reservoir construction and operation on water quality in the Sun and Teton Rivers and in the proposed project reservoirs, (2) to ascertain what benefits are achieved or lost from changes in water quality, (3) to assess the suitability of the water for proposed water uses, and (4) to determine the need for and value of streamflow regulation for the purpose of water quality control. The necessity of streamflow regulation was studied not only in light of present conditions but also for anticipated future conditions in the study area to the year 2075. The study area includes the Sun River Basin in Lewis and Clark, Teton, and Cascade Counties and the Teton River Basin in Teton and Choteau Counties. (Author)

WATER QUALITY CONTROL AND MANAGEMENT. WILLAMETTE RIVER BASIN.
Jan 67, 16p

Descriptors: (*Willamette River Basin, *Water pollution), (*Oregon, Water pollution).

The report is focused on the presentation of the principal findings of the study as they relate to requirements for action to control pollution. It emphasizes that pollution does exist in the Willamette River system, that pulp and paper mills that have been subject to less stringent waste control requirements than municipalities and other sources of waste are the major causes of pollution, that pollution abatement will require immediate improvements in the level of waste reduction achieved in the Willamette River system, and that the continuing control of pollution will impose demands for action well into the future upon the people and industries of the Willamette River Basin, as well as upon the State and Federal agencies that serve them.

SOIL SYSTEMS FOR MUNICIPAL EFFLUENTS. A WORKSHOP AND SELECTED REFERENCES.
Clean water rept.,
Ralph H. Ramsey, C. Rhys Wetherill, and H. Casper Duffer. Feb 72, 60p EPA-16080-GWF-02/72
Paper copy available from GPO *0.65, as stock no. EPI.16:16080GWF.

Descriptors: (*Sewage disposal, *Irrigation), (*Bibliographies, Sewage disposal), Percolation.
Identifiers: *Liquid waste disposal, *Sewage irrigation, *Waste water reuse.

An investigation of the use of Soil Systems for recycling treated municipal waste effluents was conducted. The scope of the project included: the preparation of a user manual entitled Applying Treated Municipal Wastewater to the Land: Current Technology and an annotated bibliography of selected references in subject area. A state of the art investigation was made of the design, operation and control of irrigation and infiltration-percolation types of soil systems. The summarized results from this investigation were used by workshop participants selected from state, municipal, and federal agencies who were involved in soil system activities as a starting point in writing the manual. The bibliography contains selections which protrayed or influenced the present state of art in the subject field. (Author Modified Abstract)

NATIONAL WATER QUALITY NETWORK APPLICATIONS AND DEVELOPMENT REPORT NO. 7. A PRELIMINARY REPORT ON THE EFFECT OF PUMP AND PIPE SYSTEMS ON DISSOLVED OXYGEN CONCENTRATION,
John D. Weeks. Jan 63, 21p

Descriptors: (*Pipeline transportation, *Dissolved gases), Oxygen, Aeration.

The report presents data which indicate that pipe and pump systems can alter the dissolved oxygen concentration, percent saturation and temperature of a water sample as it is pumped from a river to a distant sampling site. These data were obtained at the Little Miami River Field Test Station during the period July 27 to September 21, 1962. A jet and a submersible pump were delivering water through 400 feet of plastic pipe against a lift of 44 feet. (Author Modified Abstract)

WATER AND SEWER BOND SALES IN THE UNITED STATES.
Rept. for Jan-Dec 62.
1962, 13P PHS-Pub-965-Ed-62

Descriptors: (*Sewage treatment, *Financing), (*Water treatment, *Financing), Inventories, Tables (Data).
Identifiers: *Bonds.

The report contains data which are basic and necessary to the orderly and efficient management of water supply and pollution control programs. The tables supplement the annual publication of contract award data, last reported in Sewage and Water Works Construction 1962. (PHS Publication No. 758). Similar tables which describe bonds sold between July 1956 and December 1961 are available. The basic information from which these tables were developed was obtained from the Investment Bankers Association by special arrangement. Data are presented in three categories according to the use of the proceeds from the sale: (1) WATER when the bonds have been sold to finance water facilities; (2) SEWER, to finance sewage facilities; and (3) COMBINATION, to finance jointly water and sewage facilities where the portions attributable to each type are not designated. Data describing bonds sold to finance other types of construction in combination with water and/or sewage facilities construction are excluded. These data describe only those sales reported to the Investment Bankers Association or assembled by that Association from available documents.

SIGNIFICANT VECTOR PROBLEMS IN THE SOUTH PLATTE RIVER BASIN.

Mar 65, 36p PR-2

Descriptors: (*Water pollution, Platte River Basin), (*Disease vectors, *Platte River Basin), Colorado, Sources, Water quality, Abatement, Public health, Projects, Insects, Ecology, Breeding, Culicidae, Rats, Dipters, Infectious diseases.

Significant vector populations of mosquitoes, rats, and flies exist in the Basin and constitute a serious public health hazard. These vectors, especially mosquitoes and rats, are directly associated with the organic pollution present in the waters of the Basin. This pollution is instrumental in creating and supporting the present high population levels of disease-carrying vectors, particularly in the Denver Metropolitan area. Future vector population levels will remain high as long as significant quantities of organic pollutants are discharged to the waters of the Basin. Reduction or elimination of present vector populations will best be accomplished through the abatement or elimination of the gross organic pollution now being discharged to receiving waters throughout the Basin.

WATER RESOURCES STUDY AND PUBLIC HEALTH ASPECTS OF THE WHEATLAND UNIT - LARAMIE DIVISION, WYOMING: STUDY OF EFFECT OF PROJECT DEVELOPMENT WATER QUALITY, NEEDS AND VALUE OF WATER FOR THE PURPOSE OF WATER QUALITY CONTROL, AND THE PUBLIC HEALTH ASPECTS OF THE WHEATLAND UNIT, LARAMIE DIVISION - WYOMING, BUREAU OF RECLAMATION, REGION 7.
Dec 73, 59p

Descriptors: (*Laramie River Basin, *Reservoirs), (*Wyoming, *Water resources), Forecasting.
Identifiers: Platte County (Wyoming), Albany County (Wyoming), Carbon County (Wyoming).

General objectives of the study are to assess the probable effects of project construction and operation on water quality in local streams, reservoirs, and wells; to ascertain the benefits or harm resulting from changes in water quality; and to determine the need for and the value of storage for regulation of streamflow for the purpose of water quality control. These objectives were studied in the light of present conditions; also under anticipated economic development of the years 1985, 2010, and 2060. The report also includes the results of a study of general public health aspects and insect vector control of the project. A preliminary evaluation of the insect vector problems that may be associated with development of the Wheatland Unit is presented.

DEVELOPMENT AND EVALUATION OF A MATHEMATICAL MODEL OF THE LOWER REACHES OF THE KANSAS RIVER DRAINAGE SYSTEM,
Robert L. Smith, Walter J. O'Brien, Albert R. Lefeuvre, and Ernest C. Pogge. Jan 67, 147p
Contract PH-86-66-63

Descriptors: (*Kansas River Basin, *Mathematical models), (*Hydology, Kansas River Basin), Computer programs.

A mathematical model suitable for simulating the distribution of the conservative and the non-conservative water quality of the river system in the lower Kansas River basin is described. The model consists of three digital computer programs and considers both quasi-steady-state and dynamic hydrologic boundary conditions. The hydrologic and conservative portion of the model has been tested for verification with discharge records for six time periods of from four to six weeks in length. Satisfactory verification was obtained. Additional refinement of the model could be achieved by increasing the scope of the data input but this does not appear to be justified at the present time. WATER QUALITY CONTROL STUDY. MIDDLE SNAKE RIVER WATER RESOURCES DEVELOPMENT.
Jan 68, 98p

Descriptors: (*Snake River Basin, *Water pollution), (*Oregon, *Water pollution), (*Idaho, *Water pollution), (*Reservoirs, Snake River Basin).
Identifiers: *Water quality data.

The investigation explored all aspects of water quality associated with a reservoir development on Middle Snake, and advised the Bureau of Reclamation on those aspects needing consideration in formulating development plans. The report focused primarily on needs for downstream water quality control, principally temperature, for fishery enhancement purposes. In addition, project effects on water quality, both downstream and in the reservoirs, under alternative development and operation schemes, have been analyzed, and an appraisal of the need for water quality management facilities in the project structures has been made. The influence of altered quality on present and future uses and the net change to be expected in these uses have been determined, considering both beneficial and detrimental. Available data on water uses, waste sources, and water quality in the study area were examined, evaluated, and projected to provide a base for this water quality analysis.

SEWAGE DEMONSTRATION PLANT AT GLENWOOD, MINNESOTA.
Annual progress rept.

1965, 20P
Grant WPD-33
See also PB-217 903.

Descriptors: (*Sewage treatment, Minnesota), Channels (Waterways), Performance evaluation.
Identifiers: *Glenwood (Minnesota).

The purpose of the demonstration plant at Glenwood was to determine whether or not the Oxidation Channel type of sewage treatment as developed in Holland will remove more of the plant nutrients from the effluent than is possible with the more conventional types of sewage treatment. One of the principle investigators visited a number of these plants in Europe and came to the conclusion that these plants had the unique feature of assimilating much of the nitrogen and phosphate into microbial protoplasm that could be removed from the system before these ingredients were again released into solution through a breakdown or decomposition of the microorganisms involved.

Descriptors: (*Great South Bay, *Water pollution), (*Moriches Bay, *Water pollution), (*Long Island, Water pollution), (*New York, Water pollution), Proceedings.

This conference in the matter of pollution of the navigable waters of Moriches Bay and the eastern section of Great South Bay and their tributaries (Long Island, New York) involving the State of New York and the Federal Water Pollution Control Administration, is being held under the provisions of Section 10 of the Federal Water Pollution Control Act. Under the provisions of the Act, the Secretary of the Interior is authorized to call a conference of this type when he finds that substantial economic injury results from the inability to market shellfish or shellfish products in interstate commerce because of pollution subject to abatement under the Federal Act, and action of Federal, State, or local authorities. CHEMICAL WATER QUALITY ON THE LOWER KANSAS RIVER BASIN,
Walter J. O'Brien, and Ernest E. Angino. Nov 66, 78p
Contract PH-86-66-63

Descriptors: (*Kansas River Basin, *Water pollution), (*Stream pollution, Mathematical models).
Identifiers: *Water quality data.

The research was to prepare a model of the lower reaches of the Kansas River drainage basin. This model was to be used for operational and planning activities within the basin. During the course of the investigation, it became apparent that the biological, the chemical, and the time of flow data on the model region was insufficient to establish many of the parameters required to accurately describe the behavior of the drainage system. The report describes the chemical analysis of twenty-two samples each week for a period of thirteen weeks and for the mathematical correlation of the data.

A MEMBRANE FILTER-FLUORESCENT ANTIBODY METHOD FOR DETECTION AND ENUMERATION OF BACTERIA IN WATER. RAPID IDENTIFICATION OF MICROBIAL POPULATIONS IN WATER.
Rept. for 1 Nov 67-1 Nov 68,
Rufus K. Guthrie, and Dennis J. Reeder. 1 Nov 68, 21p
Grant FWPCA-WPD-146-02-68

Descriptors: (*Bacteria, *Water analysis), Identifying, Detection, Quantitative analysis, Water quality, Fluid filters, Membranes, Escherichia coli.
Identifiers: *Fluorescent antibody techniques.

A technique which employs use of non-fluorescing membrane filters and specific FITC-labelled antiserum has been successfully used in the identification and enumeration of known species of E. coli which have been added to natural populations of bacteria found in water. The quantitative results compared favorably with tests described in the standard methods. The use of a dissecting microscope with an external lighting arrangement provided a simple requirement for equipment. This method appears useful in monitoring specific bacterial types from waters which were being monitored for specific pollution. (Author)

WATER RESOURCES STUDY AND PUBLIC HEALTH ASPECTS OF THE SAN MIGUEL PROJECT COLORADO: STUDY OF POTENTIAL NEEDS AND VALUE OF WATER FOR THE PURPOSE OF WATER QUALITY CONTROL AND THE PUBLIC HEALTH ASPECTS OF THE SAN MIGUEL PROJECT, COLORADO.

Jun 64, 77p

Descriptors: (*San Miguel River Basin, *Reservoirs), (*Colorado, *Water resources), Forecasting.
Identifiers: Montrose County (Colorado), San Miguel County (Colorado).

The general objectives of the study are to assess the probable effects that the proposed project will have on water quality in streams and reservoirs of portions of Montrose and San Miguel Counties in southwestern Colorado; to ascertain the benefits resulting from changes in water quality; to assess the suitability of the water for proposed water uses; and to examine the need for regulation of streamflow for the purpose of water quality control. The report includes the results of a study of general public health aspects and insect vector control of the project. A preliminary evaluation of the insect vector problems that may be associated with the project is presented.

THE COST OF CLEAN WATER. VOLUME III. DAIRIES.
Industrial waste profiles.

Sep 67, 168p FWPCA-IWP-9
Paper copy available from GPO $1.00 as I 57.2:C82/v3/no.9.

Descriptors: (*Water pollution, *Food processing), (*Cost analysis, Water pollution), (*Dairy products, Water pollution), (*Industrial waste treatment, Food processing).
Identifiers: *Water pollution economics.

Industrial Waste Profile, Dairies, is a qualitative and quantitative description of wastes and wastewater generated in the Dairy Industry identified in SIC Code as 202 Dairy Products. The Industry is examined in its important major subdivisions identified by SIC Code. The Profile is prepared for the Base Year of 1963 which permits correlation with 1963 Census of Manufacturers data for production and water use. The waste and wastewater estimates are developed from actual plant operating experience, and are correlated with manufacturing processes and are augmented with waste reduction and removal cost estimates. Projections of waste and waste water for future years are developed in detail.

Report on Columbia River Basin Comprehensive Project For Water Supply and Pollution Control.

Descriptors: (*Columbia River Basin, *Reservoirs), (*Water pollution, Columbia River Basin).
Identifiers: *Water quality data.

The material contained in this report consists of raw field data acquired on miscellaneous reservoir field investigations performed in July 1964. The following studies are included: Lookout Point Reservoir; Dexter Reservoir; Cougar Reservoir; Hills Creek Reservoir (above); Hills Creek Reservoir; Snake River (Hells Canyon). The data are arranged by survey (in above order), with the station data arranged with the downstream station first, and the remaining stations in upstream sequence. With the exception of the plankton counts, all results were obtained in the field. Chemical analysis (alkalinity, phosphate, nitrate, and hardness) were measured.

WATER QUALITY AND POLLUTION CONTROL STUDY. MINE DRAINAGE-CHESAPEAKE BAY, POTOMAC RIVER BASIN, SUSQUEHANNA RIVER BASIN, AND DELAWARE RIVER BASIN.

Jul 67, 186p CB-SRBP-Working Document-3

Descriptors: (*Water pollution, *Mine waters), (*Chesapeake Bay, Water pollution), (*Delaware River Basin, Water pollution), (*Susquehanna River Basin, Water pollution), (*Potomac River Basin, Water pollution), (*Juniata River Basin, Water pollution), (*Tioga River Basin, Water pollution), Coal mines.
Identifiers: *Mine acid drainage.

The purpose of this report is to provide background information to be used in the development of a program to eliminate or reduce the effects of mine drainage pollution on the quality of the streams in the Susquehanna River, Delaware River, and Potomac River Drainage Basins. The report covers both the anthracite and bituminous coal mining areas in these Basins. The report does the following: Describe the chemical and physical processes involved in the formation and occurrence of mine drainage pollution; Identify and characterize the watersheds contributing mine drainage; Relate mine drainage contributions of the tributaries to the main stem of the receiving stream; Identify and estimate the extent of areas disturbed by mining operations; Suggest measures for control; and estimate costs.

BIOLOGICAL SURVEYS OF THE UPPER JAMES RIVER BASIN. COVINGTON, CLIFTON FORGE, BIG ISLAND, LYNCHBURG, AND PINEY RIVER AREAS.

Jan 68, 23p CB-SRBP-Working Document-21

Descriptors: (*James River Basin, *Biological surveys), (*Virginia, Water pollution), (*Water pollution, James River Basin), (*Jackson River, Water pollution), (*Tye River, Water pollution), Benthos, Indicator species.

A water quality pollution control study of the James River Basin conducted by the Chesapeake Bay-Susquehanna River Basins Project in 1966-67 included an evaluation of pollution control action needed to enhance and protect water quality in the Basin. To supplement chemical and biochemical water quality data used in the evaluations, the Chesapeake Field Station conducted biological surveys of the Jackson River in the Covington and Clifton Forge areas, the James River in the Big Island and Lynchburg areas, and areas in the Tye River Watershed affected by acid wastes. For the purpose of the surveys, the community of bottom (benthic) organisms was selected as the indicator of the biological condition of the stream.

A STUDY OF TIDAL DISPERSION IN THE POTOMAC RIVER.
L. J. Hetling, and R. L. O'Connell. 1965, 48p CB-SRBP-Technical Paper-7
Report on the Chesapeake Bay-Susquehanna River Basins Project.

Descriptors: (*Potomac River, *Mathematical models), Estuaries, Tidal currents.

The Chesapeake Bay-Susquehanna River Basins Project of the Federal Water Pollution Control Administration has as its primary objective the development of a comprehensive program for water pollution control in the Chesapeake Bay drainage basin. To permit a better understanding of this complex body of water and to provide a

satisfactory means for analysis of present and future pollution problems and selection of optimum control methods, an attempt has been made to model the system in mathematical terms. To mathematically describe the fate of pollutants entering such a tidal system, knowledge of its turbulent dispersion properties is required. To gather this type of information for the upper Potomac estuary, a dye tracer study was carried out by the Project during the 34-day period from June 10 to July 14, 1965. The purpose of the report is to describe the procedure used in this large scale tracer experiment, the results obtained, the methods used in the analysis of these results, and, finally, to present the conclusions reached regarding turbulent dispersion properties of this tidal system.

A WATER QUALITY STUDY OF THE PISCATAWAY CREEK WATERSHED,
Johan A. Aalto, and Norbert A. Jaworski. Aug 68, 62p

Descriptors: (*Water pollution, *Piscataway Creek), (*Maryland, Water pollution), (*Potomac River Basin, Water pollution), Sewage.
Identifiers: *Prince Georges County (Maryland), *Water quality data, Sewage treatment effluent.

The report is part of a comprehensive water quality management study of the Potomac River Basin. In recent months there has been considerable public interest in the operation of the Piscataway Wastewater Treatment Plant (PWTP) of the Washington Suburban Sanitary Commission (WSSC) and the effect of plant effluent on the water quality of Piscataway Creek. A series of field surveys was conducted by CFS on the efficiency of the PWTP and on water quality in Piscataway Creek. Although the scope of this report is primarily limited to The Piscataway Creek and the adjacent reaches of the Potomac Estuary, other embayments in the area were investigated in order to compare the Piscataway results with similar embayments including three not receiving treated water discharges.

SUMMARY OF WATER QUALITY AND WASTE OUTFALLS, ROCK CREEK IN MONTGOMERY COUNTY, MARYLAND, AND THE DISTRICT, OF COLUMBIA.
Dec 66, 59p CB-SRBP-Working Document-5

Descriptors: (*Rock Creek, *Water pollution), (*Maryland, Water pollution), (*District of Columbia, Water pollution).

A study was made of the pollution problems in the Rock Creek Sub-Basin of the Potomac River Basin. The Chesapeake Field Station was directed to make a determination of water quality in Rock Creek and an inventory of waste outfalls. Rock Creek drains a watershed area of approximately 77 square miles and has its source south of Laytonsville in Montgomery County, Maryland. The lower ten stream miles of Rock Creek drain approximately 16 square miles of the highly urban District of Columbia. Data for evaluation of the bacteriological, biological, and other water quality characteristics of the stream were obtained by field surveys and from records of health agencies in the area.

SELECTED BIOLOGICAL SURVEYS IN THE JAMES RIVER BASIN, GILLIE CREEK IN THE RICHMOND AREA, APPOMATTOX RIVER IN THE PETERSBURG AREA, BAILEY CREEK FROM FORT LEE TO HOPEWELL.
Apr 68, 24p CB-SRBP-Working Document-28

Descriptors: (*James River Basin, *Biological surveys), (*Virginia, Water pollution), (*Water pollution, James River Basin).

Biological surveys of Gillie Creek in the Richmond area, the Appomattox River in the Petersburg area, and Bailey Creek between Fort Lee and Hopewell (all tributaries of the James River in Virginia) were conducted in August 1967. The surveys were centered on these areas, as each of them was known to have serious pollution problems, and additional data were needed. For purposes of the study, the community of bottom (benthic) organisms was selected as indicator of the biological condition of the stream. Bottom organisms serve as the preferred food source for higher aquatic forms and exhibit similar reactions to adverse stream conditions.

BIOLOGICAL SURVEY OF ANTIETAM CREEK AND SOME OF ITS TRIBUTARIES, FROM WAYNESBORO, PENNSYLVANIA TO ANTIETAM, MARYLAND. POTOMAC RIVER BASIN.
Feb 68, 30p CB-SRBP-Working Document-22

Descriptors: (*Antietam Creek, *Biological surveys), (*Indicator species, Water pollution), (*Water pollution, Antietam Creek), (*Maryland, Water pollution), (*Pennsylvania, Water pollution), Benthos.

A biological survey of Antietam Creek and some of its tributaries in the reach between Waynesboro, Pennsylvania, and Antietam, Maryland, was conducted between July 19 and July 21, 1966. The biological activities were conducted concurrently with stream quality investigations. For purposes of the study, the community of bottom (benthic) organisms was selected as the indicator of the biological condition of the stream. The combination of limited locomotion and life cycles of one year or more, for most benthic species, provides a long-term picture of the water quality of a stream. Fish and algal populations were given some consideration, but only to the extent that obvious conclusions could be drawn based upon casual observations. (Author)

LAKE ERIE. SICK, DYING, OR WELL,
C. W. Northington. 1965, 14p

Descriptors: (*Lake Erie, *Water pollution).

Observations were made relative to the effects of pollution on water quality and water uses in the major problem areas within the basin and the Lake itself. Although some polluting materials are produced in the Lake, practically all wastes originate from land based activities of man. All major tributaries to Lake Erie are grossly polluted at their mouths and many are grossly polluted throughout large portions of their lengths. The rivers are discussed in hydrological sequence beginning with the St. Clair River and following the American shoreline to Niagara Falls. After the rivers, the authors discusses the Lake itself.

Identifiers: *Water quality data.

The Chesapeake Field Station of the Middle Atlantic Region, Federal Water Pollution Control Administration, conducted an intensive survey of the Shenandoah River Basin during June 1967. Separate surveys were made on (1) the Main Stem of the Shenandoah River, (2) the South Fork of the Shenandoah River, including the South River and the Middle River, and (3) the North Fork of the Shenandoah River. The purposes of these surveys were to aid in verifying the DO and BOD model parameters and to determine general water quality. The survey should also show the extent of any diurnal quality fluctuations.

MIDDLE WILLAMETTE BASIN (OREGON). PRELIMINARY ECONOMIC RECONNAISSANCE AND ESTIMATE OF GROWTH, 1960--2010.

Aug 62, 21p Working Paper-27
Report on Columbia River Basin Project for Water Supply and Water Quality Management.

Descriptors: (*Willamette River Basin, *Economic development), (*Oregon, Economic development), River basin development, Forecasting.

The analysis provides a preliminary estimate of the economic potentials and anticipated growth of the area. The study period is the 50-year period 1960-2010, with an interim point at 1985. Two limitations apply to this study. The first is that it is intended only as a preliminary estimate of the outlook for the area's growth. The second limitation is that the study is intended for use particularly in assessing future water needs. Emphasis has been placed on the analysis of those industries which make heavy demands upon the water resource. Other industries have been considered only insofar as they may have a significant effect on future population. For this reason, the study is not submitted as a detailed industrial forecast.

FLOOD AND POLLUTION CONTROL. A DEEP TUNNEL PLAN FOR THE CHICAGOLAND AREA.

May 66, 327p
Grant WPD-106-01-66

Descriptors: (*Combined sewers, *Water storage), (*Illinois, Combined sewers), Tunnels.
Identifiers: *Storm water runoff, *Chicago (Illinois).

The report discusses feasibility studies for the initial stage (Calumet Area) of the Deep Tunnel Plan for flood and pollution control in the Chicagoland Area. Basically, the Plan would utilize existing lateral and main sewers, with additional main sewers to relieve laterals at their high ends. Both the existing and new main sewers would be intercepted at appropriate locations by vertical shafts connecting to a tunnel system 600 feet or more below the ground surface. These tunnels, or galleries, would both temporarily store storm water overflows and drain these waters to a reversible pump-turbine plant location near the Calument Sewage Treatment Works.

THE EFFECTS OF SULFIDES ON ANAEROBIC TREATMENT,
Alonzo Wm. Lawrence, Perry L. McCarty, and Fernand J. A. Guerin. 1964, 23p

Descriptors: (*Anaerobic processes, Inhibitors), (*Sewage treatment, Anaerobic processes), Hydrogen sulfide, Retarding, Toxicology, Microorganism control (Sewage treatment).

Anaerobic waste treatment is a biological process. As such it depends for successful operation on the maintenance of a proper environment for the organisms involved. By delineating this proper environment, a more complete understanding of the process will be attained. This will lead to an increase in the operational control and predictability of anaerobic treatment. Special attention must be focused on the problem of toxicity-causing substances if anaerobic treatment, long a mainstay of municipal sewage treatment, is to be successfully extended to the treatment of complex industrial wastes. The effects of high sulfide concentrations on anaerobic treatment are not well understood, and were explored in this investigation.

NATIONAL WATER QUALITY NETWORK ANNUAL COMPILATION OF DATA, OCTOBER 1, 1959-SEPTEMBER 30, 1960.

1960, 428p PHS-Pub-663-1960
A Federal State and Local Cooperative Report on Water Quality Determinations of Surface Waters at Selected Locations Throughout the United States.

Descriptors: (*Water pollution, *United States), Inventories, Tables (Data), Radioactive contaminants, Plankton, Pesticides, Organic compounds, Trace elements.
Identifiers: *Water quality data.

This is the third annual compilation of data from the National Water Quality Network of the Public Health Service. Again the data have revealed some very interesting findings which can be applied directly to problems of water quality evaluation. During this past year an increasing number of State and other non-Federal agencies have taken an active interest in the field of water quality measurement. The mounting nationwide necessity for conserving our water resources has been a major incentive in stimulating this interest. Our own Network has been increased from 54 to 72 stations during this data year, with additional expansion still underway.

WATERSHED CONTROL FOR WATER QUALITY MANAGEMENT,
Reginald Bowering, Kenneth H. Spies, Alfred T. Neale, and William E. Bullard. Apr 61, 42p

Descriptors: (*Pacific Northwest, *Water resources), (*Forestry, Water resources), Management planning.

The purpose of this water supply and watershed protection document is to demonstrate the basic principles and problems of long-range programs of

water quality protection and management on forested watersheds in the Pacific Northwest. Consideration is given to natural as well as man-caused variations in water resource characteristics and their relationships to municipal, industrial and agricultural consumptive uses and the non-consumptive uses of water including fisheries and recreation. The report summarizes water supply and quality requirements for the various uses in the Pacific Northwest, indicates how lack of adequate control measures and management practices adversely affects these uses, and includes recommendations for improvements in watershed protection and management.

MILK LABORATORIES APPROVED BY FEDERAL AND STATE AGENCIES. IN ACCORDANCE WITH THE PUBLIC HEALTH SERVICE GRADE 'A' PASTEURIZED MILK ORDINANCE AND EVALUATION OF MILK LABORATORIES.
1967, 42p PHS-Pub-999-FP-5

Descriptors: (*Milk, Laboratories), Food sanitation, Food processing, Pasteurizing, Standards, Public health, State government, Bacteriology.

The Grade'A' Pasteurized Milk Ordinance (1965 Recommendations of the United States Public Health Service) requires that 'Samples shall be analyzed at an official or appropriate officially designated laboratory.' An official laboratory is a biological, chemical, or physical laboratory which is under the direct supervision of the State or a local health authority. An officially designated laboratory is a commercial laboratory authorized to do official work by the supervising agency, or a milk industry laboratory officially designated by the supervising agency for the examination of producer samples of Grade A raw milk for pasteurization. The state central milk loboratories listed have been certified by milk laboratory survey officials of the Public Health Service. The official, commercial, and dairy industry laboratories identified have been approved by a milk laboratory survey official of their state as being in substantial compliance with standard methods as evidenced by a survey at least biennially and acceptable analysis of split samples of milk sent by the state to each laboratory every 6 months.

TREATMENT NEEDED BY SEWAGE BEFORE INJECTION WELL RECHARGE.
Progress rept. no. 2, Nov 65-Dec 66,
Donald B. Stevens. Nov 67, 45p
Contract WPD-83-02-66

Descriptors: (*Sewage disposal, *Injection wells), (*Waste disposal, Injection wells), Soil properties, Plugging.
Identifiers: *Liquid waste disposal, Water pollution control.

Injection wells provide a safe, economical, and effective means of recharging substantial quantities of waste water to the ground water supply. However, the problem of major importance in connection with injection well recharge is the clogging of the soil pores at the soil and water injection interface and in the soil in the immediate vicinity of the injection well. Two clogging factors, physical and biological, were observed after recharge of either fresh water or filtered secondary treated sewage effluent. Both clogging processes took place at the same time during injection. Experimentation with combination beds of sand and anthracite, sand, anthracite and carbon, and single beds of sand or anthracite led to the choice of anthrafilt filter media as producing the longest filter runs and the best effluent quality.

WATER METALS NUMBER 5. REPORT OF A STUDY CONDUCTED BY ANALYTICAL REFERENCE SERVICE,
R. J. Lishka, and J. H. Parker. 1969, 93p PHS-Pub-1910, PHS-ARS-Study-34

Descriptors: (*Water analysis, *Aluminum), (*Water pollution, Aluminum), Accuracy, Standards, Trace elements.
Identifiers: *Water pollution detection.

Aluminum is present in practically all natural waters and may appear additionally in treated waters as a residual from alum coagulation. There is increasing evidence that very small amounts of aluminum, such as 0.05 mg/l, entering the distribution system can be objectionable. As a result, a recently proposed rapid eriochrome cyanine R (ECR) method for the determination of aluminum in water was tried and appeared to be at least as accurate as the aluminon method and less time consuming and complicated. This study was devised primarily to evaluate the ECR method and compare it with the existing aluminon standard method for aluminum in the presence and absence of interferences (fluorides, polyphosphates, and other metals).

WATER POLLUTION CONTROL. EXCERPTS FROM 'A WATER POLICY FOR THE AMERICAN PEOPLE'.

Jan 51, 28p PHS-Pub-58
Report of the President's Water Resources Policy Commission - 1950.

Descriptors: (*Water pollution, *United States).

The review proved conclusively that (1) even though not all streams are polluted, our major streams are gravely affected and the problem is Nation-wide, and (2) pollution is a factor that already affects or eventually will affect all water resources development, whether it be for flood control, irrigation, hydroelectric power, municipal and industrial use, or recreation. These 11 field surveys covered 4,409 municipalities and 3,413 industrial plants. Of the cities studied, 1,912, or 43 percent, were discharging raw untreated waste into nearby water. The surveys reveal a predominance of pollution in the heavily populated, highly industrialized East.

THE EVALUATION OF DEODORANTS FOR USE IN AIRCRAFT CHEMICAL TOILETS.
Final rept.,
L. R. Setter, and C. E. Whitfield. Aug 55, 38p

Descriptors: (*Toilet facilities, *Deodorizing), (*Aircraft equipments, Toilet facilities), Odor control, Corrosion.

The objective of the study was to select deodorants for use in aircraft chemical toilets, and also to develop a group of minimum performance characteristics for deodorant chemicals acceptable to the U. S. Air Force. An air dilution technic obtaining threshold odor values leading to odor control factors was found to be the most satisfactory method for deodorant evaluation. This technic utilized an osmometer developed especially for the purpose. Olfactory anaesthesia and the masking power of deodorants are two other important parameters that can be readily evaluated with the osmometer. (Author Modified Abstract)

SUPPLEMENT TO EFFECTS OF POLLUTION ON WATER QUALITY, PERDIDO RIVER AND BAY, ALABAMA AND FLORIDA.

Feb 71, 31p

Descriptors: (*Perdido River, *Water pollution), (*Paper industry, Water pollution), (*Florida, Water pollution), (*Alabama, Water pollution) Industrial wastes.
Identifiers: *Cantonment (Florida).

During November 1970, personnel from the Southeast Region, Federal Water Quality Administration (FWQA) conducted a 72-hour survey of waste discharges at the St. Regis Integrated Pulp and Paper Mill at Cantonment, Florida. The mill produces 950 tons per day of pulp, of which approximately 280 tons per day are bleached. Approximately 29 million gallons per day (mgd) of liquid wastes are discharged into Elevenmile Creek which flows into the Perdido River. Recommendations are included to abate the existing pollution in Perdido River and Bay, for water quality management and waste abatement program.

INVESTIGATION OF AMPHIPATHIC WATER--SOLUBLE POLYMERS AS FLOCCULANTS AND FLOTATION AIDS IN DOMESTIC WASTEWATER TREATMENT,
Julian L. Azorlosa, Logan V. Miller, and Edward Witt. Apr 70, 57p
Contract DI-14-12-430

Descriptors: (*Flocculants, *Ammonium quaternary salts), (*Polymers, Flocculants), (*Sewage treatment, *Flocculating), Polymers, Solubility.

Five amphipathic polymer systems (strong and weak anionic, strong and weak cationic, and nonionic) were prepared by two techniques giving lower and higher molecular weights. The various polymer systems were characterized by Brookfield viscosity and foaming tendency in aqueous solution. These polymers were evaluated for efficiency in removing solids from unsettled raw sewage using three methods: a simple continuous flotation cell, a static pressurized water flotation unit, and a conventional jar test. The nonionic and anionic amphipathic polymers showed little or no flocculating ability; only the cationic types were effective. Qualitatively the strong cationic polymers (dimethylaminoethyl metharcrylate/ethyl bromide quaternary salt as comonomer) were more effective than the weak cationic polymers (dimethylaminoethyl methacrylate/HCl salt as comonomer). Effectiveness increased with increasing % quaternary comonomer.

137CS IN WHITETAILED DEER AS RELATED TO VEGETATION AND SOILS OF THE SOUTHEASTERN UNITED STATES,
S. L. Cummings, J. H. Jenkins, L. Bankert, P. H. Bedrosian, and C. R. Porter. 1969, 16p

Descriptors: (*Deer, Radioactive contaminants), (*Southeast United States, *Radioactive contaminants), (*Cesium 137, Southeast United States), Radiobiology, Ecology, Wildlife, Vegetation.

Data are presented for Radioactive Cesium (137Cs), in whitetailed deer and vegetation of the southeastern United States along with information as to the nature of the associated soils. The concentrations of 137Cs in some of the vegetation were of sufficient magnitude to account for the 137Cs concentrations found in the deer. The highest 137Cs concentrations in deer were associated with the Humic-Gley soils along the Atlantic and Gulf Coasts. These soils are predominately sandy in nature and have relatively low fixing capacities. The concentrations of 137Cs in the vegetation grown on the Humic-Gley soils under natural and controlled conditions were greater than from the Gray-Brown Podzolic, and Red-Yellow Podzolic soils. THE MOVEMENT AND IMPACT OF PESTICIDES USED IN FOREST MANAGEMENT ON THE AQUATIC ENVIRONMENT AND ECOSYSTEM. VOLUME I.
Pesticide study series no. 7, 19 Jul 71-15 Jan 72, Charles D. Reese, and David L. Becker. Jun 72, 325p CAL-EQ-5025-D-2-Vol-1 EPA-OWP-TS-00-72-07, EPA-OWP-PSS-7
Contract EPA-68-01-0125

Descriptors: (*New York, Pesticides), (*Forestry, *Pest control), (*Aquatic biology, *Pesticides), (*Water pollution, Pesticides), History, DDT, Hydrology, Leaching.
Identifiers: Sevin, Path of pollutants, Gypsy moth.

The report summarizes the findings, conclusions, and recommendations relative to the use of pesticides in the forested regions of New York State, and the resultant impact on the aquatic environment. It is organized on a chronological basis. The scope of this study starts with an historical sketch on the use-development of pesticides in New York State forest management and concludes with indications as to the potential role of pesticides in the future. The fate of pesticides and their impact on the aquatic environment is chronologically summarized by consecutive presentation of what is applied, how is it applied, how it moves from the forest to the aquatic environment and finally, the manifestations of the pesticide within the aquatic environment. EFFECT OF IRRIGATION RUN-OFF ON SURFACE WATER SUPPLIES,
Paul D. Haney, and Thomas W. Bendixen. 14 May 53, 28p

Descriptors: (*Irrigation, *Water pollution), (*Surface water runoff, Water pollution).

Interest in irrigation stems from the facts that (a) irrigation agriculture is the Nation's largest user of fresh water resources and (b) drainage from irrigated areas may have important effects on water quality. The discussion is concerned mainly with chemical water quality changes associated with irrigation use.

THE COST OF CLEAN WATER. VOLUME III. PAPER MILLS, EXCEPT BUILDING.
Industrial waste profiles.
Nov 67, 167p FWPCA-IWP-3
Contract DI-14-12-10
See also Volume III, no. 4, PB-218 185. Paper copy available from GPO $2.00, as stock no I67.2:C82V3/No3.

Descriptors: (*Paper industry, *Water pollution), (*Industrial waste treatment, Paper industry), Spent liquors (Pulping), Cost estimates.
Identifiers: *Water pollution control.

The industrial wastewater profile covers the Paper Industry and Integrated pulp and paper mills in the United States as defined by Standard Industrial Classification 2621 (except buildings) of the U. S. Department of Commerce. The principal areas of discussion are: the fundamental manufacturing processes and significant water and gaseous wastes generated by each operation, process water use and reuse, waste quantities and characteristics, waste reduction practices (including both waste treatment and in-plant processing) and their effectiveness, and waste treatment costs. Projections or estimates have been made for the changes, developments, and operating practices that will be prevalent in 1977 for each area of discussion. (Author)

REPORT ON THE IMMEDIATE WATER POLLUTION CONTROL NEEDS FOR THE INTERSTATE AND INTRASTATE WATERS OF THE NEW JERSEY COASTAL REGION.

Jun 67, 109p
Errata sheet inserted.

Descriptors: (*Water pollution, *New Jersey), Coasts.

The report reviews the water pollution problem in the New Jersey Coastal Region, which extends from Sandy Hook to Cape May and includes those streams draining eastward to the Atlantic Ocean, the various bays and harbors, and the immediate Coastal waters. The Region lies entierly within the State of New Jersey. The discharge of waste from municipalities and numerous other sources degrades water quality and prevents full utilization of this natural resource throughout the Region. The purpose of this report is to delineate those actions which should be undertaken immediately to prevent further degradation of these waters.

POLLUTION AFFECTING LAS VEGAS WASH, LAKE MEAD, AND THE LOWER COLORADO RIVER, NEVADA, ARIZONA, CALIFORNIA.
Clean water rept.
Dec 71, 92p

Descriptors: (*Las Vegas Wash, *Water pollution), (*Nevada, Water pollution), (*Lake Mead, Water pollution), Sources.
Identifiers: *Clark County (Nevada).

Direct and indirect discharges of municipal and industrial wastes to Las Vegas Wash from sources in Las Vegas Valley, Nevada, are causing interstate pollution of Lake Mead and the Lower Colorado River which is deleterious to the health or welfare of persons living in Arizona, California and Nevada. This pollution also causes violations of Federal-State water quality standards applicable to Lake Mead and the Colorado River. The report summarizes the technical information document-

ing the interstate pollution and recommends remedial abatement actions.

WATER POLLUTION SURVEILLANCE SYSTEM. ANNUAL COMPILATION OF DATA, 1 OCTOBER 1962-30 SEPTEMBER 1963. VOLUME 5: OHIO RIVER BASIN-TENNESSEE RIVER BASIN.

1963, 121p PHS-Pub-663-Rev-63-Vol-5

Descriptors: (*Water pollution, *Ohio River Basin), (*Water pollution, *Tennessee River Basin), Allegheny River, Cumberland River, Kanawha River, Little Miami River, Monongahela River, Wabash River, Clinch River, Ohio River, Tennessee River, Radioactive contaminants, Trace elements, Benthos, Plankton, Stream flow.
Identifiers: *Water quality data.

This is the sixth annual compilation of data from the Public Health Service Water Pollution Surveillance System (formerly the National Water Quality Network). During this, year, the System was increased from 122 to 128 stations. In order to provide data in a form more useful for local or regional water pollution control officials and their staffs, the present compilation is published in 11 separate volumes. The surveillance data reported herein reveal additional findings on pesticides and other organic chemicals in surface waters and on trends in radioactivity and other areas.

NATIONAL WATER QUALITY NETWORK ANNUAL COMPILATION OF DATA, OCTOBER 1, 1960-SEPTEMBER 30, 1961.

1961, 552p PHS-Pub-663-1961
A Federal, State and Local Cooperative Report on Water Quality Determinations of Surface Waters at Selected Locations Throughout the United States.

Descriptors: (*Water pollution, *United States), Inventories, Tables (Data), Radioactive contaminants, Plankton, Pesticides, Organic compounds, Trace elements.
Identifiers: *Water quality data.

This is the fourth annual compilation of data from the National Water Quality Network of the Public Health Service. Again the data have revealed some very interesting findings which can be usefully applied to facilitate water quality evaluation. As in each of the years the Network has functioned, an increasing number of State and other non-Federal agencies have taken an active interest in the field of water quality measurement. This is directly attributable to the mounting need for nationwide conservation of water resources. Our own Network was increased from 71 to 93 stations during this data year, and continual expansion is planned toward a goal of 300 stations.

A RATIONAL SYSTEM FOR ASSIGNING RESEARCH AND DEVELOPMENT PRIORITIES AT ADVANCED WASTE TREATMENT LABORATORY, CINCINNATI, OHIO.
Sep 70, 70p

Descriptors: (*Sewage treatment, Project planning), Research management.
Identifiers: *Water pollution control.

The report represents a first attempt to supply the staff work for the consideration of priorities for the advanced waste treatment R and D Program in Cincinnati. The priority setting considerations presented are wholly objective. Organizational, political, and personality constraints are excluded. It is assumed that consideration of these more subjective factors will follow the objective analysis and some reordering of priorities will be required. It is shown that existing theory for priority setting is not foolproof and much depends on accurate estimating. The ideas of cost-benefit analysis and planning are useful and if used properly can bring the problem into clearer focus and lead to a rational decision making process.

REMOVAL OF SOLUBLE ORGANIC AND INSOLUBLE ORGANIC AND INORGANIC MATERIALS BY FLOCCULATION,
E. H. Crook, and F. X. Pollio. 1965, 4p
Presented at the International Water Conference Annual Meeting (26th) at Pittsburgh, Pa. on 20-22 October 1965.

Descriptors: (*Sewage treatment, *Flocculating), (*Polyelectrolytes, Flocculating), (*Chemical removal (Sewage treatment), Flocculating).

In the very brief study the removal with polyelectrolytes of both soluble organic and insoluble organic and inorganic materials is considered. Particular attention is given to the use of Primafloc C-7, a polyamine bisulfate salt which permits much greater removals to be attained than do other presently known cationic polyelectrolytes. Emphasis is placed upon the removal of soluble, anionic, organic foulants from aqueous streams. These materials are known to irreversibly foul conventional anion exchange resins. Economical removal of such anionic, organic foulants should increase considerably the useful life of such anion exchange resins.

A FINITE DIFFERENCE SOLUTION FOR REVERSE OSMOSIS IN TURBULENT FLOW,
S. Srinivasan, and Chi Tien. 1965, 37p

Descriptors: (*Osmosis, *Turbulent flow), Numerical analysis, Polarization (Charge separation), Diffusion.
Identifiers: *Reverse osmosis, Concentration polarization.

A finite difference solution for reverse osmosis in turbulent flow is presented. The case of a flat duct made of two parallel semi-permeable membranes is considered. The pertinent diffusion equation with the eddy diffusivity based on Deissler's expression is solved using a two-step linearized finite difference scheme, taking into account the nonlinear effect due to the varying water flux across membrane along the axial direction. Numerical results relating concentration polarization, water flux, Sherwood number water recovery ratio and operating conditions are given for a variety of cases. (Author)

KINETICS AND MECHANISM IN ACTIVATED SLUDGE PROCESSES.
Progress rept. 1 Sep 62-31 Aug 66,
A. F. Gaudy, Jr. Aug 66, 477p
Grant PHS-WP-00325

Descriptors: (*Activated sludge process, *Reaction kinetics), (*Sewage treatment, Activated sludge process), Biochemical oxygen demand, Metabolism, Microorganism control (Sewage).
Identifiers: Chemical oxygen demand.

The report consists mainly of a compilation of sixteen research papers and publications of work accomplished during the four-year period. Work on mechanism and kinetics of waste water purification was conducted in batch and in completely mixed continuous flow units. It was also necessary to conduct studies on various aspects of research methodology and technique. Reported in detail are investigations on the use of a colorimetric method for determination of COD, the use of COD values of bacterial sludges in waste water purification research, and a statistical study of the spot plate method for viable cell count. A considerable research effort was also made concerning the kinetics and mechanism of exertion of biochemical oxygen demand in both dilute and high energy systems. The effect of sludge concentration on various aspects of biological activity and the mechanism and kinetics of substrate utilization at high biological solids concentration were investigated.

THE IDENTIFICATION AND MEASUREMENT OF CHLORINATED HYDROCARBON PESTICIDES IN SURFACE WATERS,
A. W. Breidenbach, J. J. Lichtenberg, C. F. Henke, D. J. Smith, and J. W. Eichelberger, Jr.
Sep 64, 113p PHS-Pub-1241
Errata sheet inserted.

Descriptors: (*Pesticides, *Water analysis), (*Chlorine organic compounds, Water analysis), (*Water pollution, Pesticides), Adsorption, Carbon, Gas chromatography.
Identifiers: *Water pollution detection.

The manual describes the analytical methods which are currently being used in the Public Health Service's Water Pollution Surveillance System in identifying chlorinated hydrocarbon pesticide levels in surface waters. Organic chemicals, as a group, have presented a special challenge to the laboratory because of the many thousands of such chemicals in use and the many complex mixtures of wastes produced in their manufacture. Specific identification and measurement of one class of organics, the chlorinated hydrocarbon pesticides, to a sensitivity of one

microgram per liter or below is of particular concern. The carbon adsorption method, developed over a decade ago, has been effectively employed in pesticide pollution studies.

Federal Water Pollution Control Administration, Metuchen, N.J. Raritan Bay Project.
REPORT FOR THE CONFERENCE ON POLLUTION OF RARITAN BAY AND ADJACENT INTERSTATE WATERS. THIRD SESSION. VOLUME III. APPENDICES.

May 67, 152p
See also PB-218 090 and PB-217 844.

Descriptors: (*Raritan Bay, *Water pollution), (*Clams, Raritan Bay), Shellfish, Distribution (Property), Public health.
Identifiers: *Water quality data.

Cases of infectious hepatitis traced to clams harvested from Raritan Bay in 1961 stimulated a cooperative State-Public Health Service study of water and shellfish sanitary quality in the bay. The present report describes the distribution of only two species of clams, the soft shell clam, mya arenaria, and the northern quahaug, mercenaria mercenaria. Quantitative features of population sampling permitted statistical evaluation of the clam resource of Raritan Bay. This information, coupled with the bacteriological information being processed for a separate report, describes the clam-water relationship in Raritan Bay.

PB-218 090
Federal Water Pollution Control Administration, Metuchen, N.J. Raritan Bay Project.
REPORT FOR THE CONFERENCE ON POLLUTION OF RARITAN BAY AND ADJACENT INTERSTATE WATERS. THIRD SESSION. VOLUME II. SOURCES OF POLLUTION.

May 67, 233p
See also PB-217 844 and PB-218 089.

Descriptors: (*Raritan Bay, *Water pollution), Sewage, Heat.
Identifiers: Sewage treatment effluent, Thermal pollution, *Water quality data.

Major pollutional loads to the study waters are presented. Examination of these data indicates the large demand placed upon the assimilative capacity of these waters by the discharge of treated and untreated municipal and industrial wastes. The discharge of additional wastes in adjacent waters increases the magnitude and impact of the direct loads. Contamination by pollutants other than BOD from these same sources is also a significant problem, such as the discharge of unchlorinated and raw municipal wastes. Additional pollution results from the discharge of more than 1.0 billion gallons per day of 'hot' cooling water from power generating plants.

PB-218 169
Public Health Service, Cincinnati, Ohio. Stream Pollution Investigations Station.
THE USE OF CHLORINE FOR THE CORRECTION OF SLUDGE BULKING IN THE ACTIVATED SLUDGE PROCESS,
Russell S. Smith, and W. C. Purdy. 1935, 16p
Availability: Available in microfiche only.

Descriptors: (*Sewage treatment, Microorganism control (Sewage)), (*Fungi, *Microorganism control (Sewage)), (*Chlorination, Microorganism control (Sewage)).

The efficiency of many activated sludge sewage treatment plants is materially affected at times by a diffuse or fluffy condition of the sludge particles, which, in the clarification tank following aeration, results in slow settlement and hence increased volume or 'bulking' of the sludge. Consequently, in aggravated cases large amounts of these sludge solids may be carried over the effluent weirs instead of being removed through the bottom sludge outlets. The report discusses a method of control involving the addition of some material in a concentration toxic to the fungus but not to the other microscopic organisms normal to proper functioning activated sludge.

1963, 207p PHS-Pub-1065-Vol-2
See also Volume 3, PB-218 174.

Descriptors: (*Delaware, *Sewage treatment), (*New Jersey, *Sewage treatment), (*New York, *Sewage treatment), (*Pennsylvania, *Sewage treatment), Inventories, Tables (Data).

This Inventory contains the latest available data for all sources of municipal pollution which are of significance in water pollution control programs. In the listings, each non-community entry is referred to the nearest community, whenever possible. Entries appear in alphabetical order according to community. Following each State listing is a table showing those sewage disposal facilities which serve more than one of the entries, together with the names of all entries which are served by the particular facility.

THE COST OF CLEAN WATER. VOLUME III. INDUSTRIAL WASTE PROFILES NO. 9. DAIRIES.

Sep 67, 168p FWPCA-IWP-9
Paper copy available from GPO $1.00 as stock no, I67.2:382/V3/NO9. See also volume 3 no. 1, PB-218 184.

Descriptors: (*Food processing, *Water pollution), (*Industrial wastes, *Dairy products), Economic analysis, Cost analysis, Industrial wastes, Milk.
Identifiers: *Dairy industry, *Water pollution economics.

The profile is a qualitative and quantitative description of wastes and wastewater generated in the Dairy Industry. The industry is examined in its important major subdivisions as follows: Creamery butter; Cheese, natural and processed; Condensed and evaporated milk; Ice cream and frozen desserts; Fluid milk; The waste and wastewater estimates are developed from actual plant operating experience, and are correlated with manufacturing processes and are augmented with waste reduction and removal cost estimates. Projections of waste and wastewater for future years are developed in detail.

THE COST OF CLEAN WATER. VOLUME II. DETAILED ANALYSIS.

10 Jan 68, 253p
See also report dated 10 Jan 68, PB-218 178.

Descriptors: (*Water pollution, *Economic analysis), (*Sewage treatment, *Economic analysis), (*Industrial waste treatment, *Economic analysis), Cost estimates.
Identifiers: *Water pollution economics.

The report estimates the costs of providing waste treatment to the total urban population of the U. S. by 1973 (162.6 million) at appropriate treatment levels to comply with water quality standards. In order to meet the standards by 1973, it is estimated that 90% of the urban population will require secondary treatment facilities and 10% primary treatment facilities. The urban population in 1973 will be 75% of the total U. S. population. Currently, only 55% of the urban population is served by adequate waste treatment facilities.

THE COST OF CLEAN WATER. VOLUME III. INDUSTRIAL WASTE PROFILES NO. 2. MOTOR VEHICLES AND PARTS.

24 Nov 67, 125p FWPCA-IWP-2
Paper copy available from GPO $.70 as stock no. I67.2:382/V3/No2. See also volume 3 no. 4, PB-218 185.

Descriptors: (*Automotive industry, *Water pollution), (*Industrial wastes, Automotive industry), Cost estimates, Industrial waste treatment, Economic analysis.
Identifiers: *Water pollution economics.

The report develops a pollution profile for the Motor Vehicle and Motor Vehicle Equipment Industry. Projected waste loads and treatment trends have been provided. The replacement values for the existing treatment facilities as well as the anticipated costs for future treatment practices have been included in terms of both capital and operating costs. Existing and projected waste loads and

treatment practices have been established for that part of the Motor Vehicle Industry that can be characterized as stamping plants, body and final assembly operations only.

THE COST OF CLEAN WATER. VOLUME III. INDUSTRIAL WASTE PROFILES NO. 1. BLAST FURNACE AND STEEL MILLS.

28 Sep 67, 102p FWPCA-IWP-1
Paper copy available from GPO $0.60 as stock no. I67.2:382/V3/NO1. See also volume 3 No. 2, PB-218 183.

Descriptors: (*Iron and steel industry, *Water pollution), (*Steel making, *Industrial wastes), Steel plants, Blast furnaces, Cost estimates, Industrial waste treatment, Economic analysis.
Identifiers: *Water pollution economics.

The profile study provides the Federal Water Pollution Control Administration with comprehensive information on the waterborne wastes of the blast furnace and steel mill industry - SIC 3312. This industry includes establishments primarily engaged in manufacturing hot metal, pig iron, silvery pig iron, and ferroalloys from iron ore and iron and steel scrap; converting pig iron, scrap iron, and scrap steel into steel; and in hot-rolling steel into basic shapes such as plates, sheets, strips, rods, bars, and tubing. Merchant blast furnaces and by-product or beehive coke ovens are also included in this industry. (Author Modified Abstract)

AN INDUSTRIAL WASTE GUIDE TO THE MILK PROCESSING INDUSTRY.

1959, 26p PHS-Pub-298-Rev-59

Descriptors: (*Milk, Food processing), (*Food processing, *Industrial waste treatment).
Identifiers: *Water pollution control.

The publication represents the combined efforts of dairy waste sanitary engineers, dairy waste technologists, and others of the dairy industry to develop a practical guide for milk plant management and operating personnel. The subject of milk plant wastes, with methods of recovery and treatment, has been extensively studied for years by State and Federal agencies, experiment stations, sanitary engineers, and other individuals. For the purpose of this guide results as are available have been used to demonstrate the various types of treatment. This publication emphasizes the appreciable reduction of dairy waste which can be accomplished through a waste-prevention program that can be carried out within the processing plant. Practical procedures are described. Some performance data are presented which will serve to emphasize to milk plant supervisory personnel the value of waste prevention methods in reducting total waste treatment costs.

Descriptors: (*Connecticut, *Water supply), (*Maine, *Water supply), (*Massachusetts, *Water supply), (*New Hampshire, *Water supply), (*Rhode Island, *Water supply), (*Vermont, *Water supply), Inventories, Tables (Data).

This volume is one of nine which, taken together, comprise an inventory of public water supply facilities in the United States as of January 1, 1963. The listing includes all facilities serving places having a population of 100 or more which have been reported by the responsible State agencies. In a few States, places smaller than this size have been reported. The listing is alphabetic by name of facility or place within the State. The purpose of this inventory is to furnish up-to-date information on all water facilities for the use of industries and other private agencies and all levels of government.

Identifiers: *Water quality data.

The accompanying figures depicting various considerations of coliform-type bacteria concentration in the Missouri River are based upon data furnished through the cooperation of water treatment plant operators at Omaha, Nebraska; Council Bluffs, Iowa; St. Joseph, Missouri; Kansas City, Kansas; Lexington, Missouri; and Boonville, Missouri. Operators at Omaha, Council Bluffs, and Kansas City, Kansas, made available their routine daily analysis results. Personnel at the Missouri plants began daily analyses in February 1955 at the special request of the Missouri Division of Health and Public Health Service. Collection of data at the six localities is continuing. This report concerns the period February 1955 to December 1956.

DESIGN REQUIREMENTS FOR MUNICIPAL DIATOMITE FILTERS.
Progress rept. no. 3, 1 Mar 64-30 Nov 65,
Paul E. Morgan, and E. Robert Baumann. 15 Dec 65, 263p
Grant PHS-WP-00196

Descriptors: (*Diatomaceous earth, *Filter aids), (*Sewage filtration, Filter aids), (*Filtration, Filter aids), Numerical analysis, Design, Computer programs, Mathematical models.

The study was undertaken to determine the characteristics of municipal applications in which diatomite filters may be used successfully, to study the effect of various variables on filtration economy and effectiveness, and to outline a procedure for designing a plant to operate with maximum economy. The topics discussed include: Permeability of diatomite filter cakes containing various clay minerals; Coatings for filter media; Diatomite filtration equations for flat and cylindrical septa; Prediction of diatomite filter cake resistance; Optimum design and operation of diatomite filtration plants; and User manual for program for optimization of plant operation.

PB-218 211
International Joint Commission-United States and Canada.
REPORT OF THE INTERNATIONAL JOINT COMMISSION, UNITED STATES AND CANADA, ON THE POLLUTION OF BOUNDARY WATERS.
1951, 328p

Descriptors: (*Lake Superior, *Water pollution), (*Lake Huron, *Water pollution), (*Lake Erie, *Water pollution), (*Lake Ontario, *Water pollution), United States, Canada.
Identifiers: *Water quality data.

In order to permit a more accurate evaluation of the nature and extent of pollution, its effects and the remedial measures necessary, the Commission, in the course of the investigation, adopted the following statement of objectives for boundary waters quality control which was developed by the technical advisers: 'The term 'boundary waters' as herin used shall include the waters defined in the references to the International Joint Commission dated April 1, 1946, October 2 and 3, 1946, and April 2, 1948 and are as follows: St. Clair River, Lake St. Clair, the Detroit River, St. Marys River from Lake Superior to Lake Huron, and Niagara River from Lake Erie to Lake Ontario. These objectives are for the boundary waters in general, and it is anticipated that in certain specific instances, influenced by local conditions, more stringent requirements may be found necessary.

THE COST OF CLEAN WATER. VOLUME III. PETROLEUM REFINING.
Industrial Waste Profiles.

Nov 67, 197p FWPCA-IWP-5
Paper copy available from GPO $1.50 as I 67.2:382/V3/No.5.

Descriptors: (*Water pollution, *Refineries), (*Petroleum refining, Water pollution), (*Cost analysis, Water pollution), (*Industrial waste treatment, Refineries).
Identifiers: *Water pollution economics.

The industrial wastewater profile covers the Petroleum Refinery industry in the United States as defined by Standard Industrial Classification 2911 of the U. S. Department of Commerce. It does not cover the production of crude oil or natural gas from wells or the natural gasoline and other operations associated with such production. Transportation of petroleum products is covered only to the extent that it is a part of refinery pollution control, such as treatment of ballast water. The principal areas of discussion are: the fundamental manufacturing processes and their patterns of use, water use and reuse, waste quantities and characteristics, waste reduction practices (including both waste treatment and in-plant processing) and their effectiveness, and waste treatment costs. In each area of discussion trends have been projected to or estimates made for the situation expected in 1977.

EXISTING POLLUTION IN THE OHIO RIVER AND THE EFFECT OF CHANGES IN STREAM DISCHARGE BY THE PROPOSED FLOOD CONTROL PROGRAM ON THE OHIO RIVER WATERSHED.

1 Dec 37, 105p

Descriptors: (*Ohio River, *Water pollution), (*Flood control, Ohio River), Flushing, Stream flow.
Identifiers: Low water flow.

Effect of proposed flood control program in the Ohio Valley on existing river pollution. Included are reviews such as: Summary of existing pollutional conditions in the Ohio River, probable effect on existing pollution of flood control program, effects of increased low water flows in Pittsburgh area, effects of increased low water flow in tributaries polluted with acid drainage, effect of increased low water flows on conditions above and below communities outside zone of acid drainage, effect of increased low water flow on tributary streams not affected by acid drainage, effect of increased low water flow on the pollution at water works intakes.

THE COST OF CLEAN WATER. VOLUME III. PAPER MILLS.
Industrial waste profiles.

Nov 67, 190p FWPCA-IWP-3
Paper copy available from GPO $2.00 as I 67.2:382/v3/no.3.

Descriptors: (*Water pollution, *Paper industry), (*Cost analysis, Water pollution), (*Industrial waste treatment, Paper industry).
Identifiers: *Water pollution economics.

The industrial wastewater profile covers the Paper Industry and Integrated pulp and paper mills in the United States as defined by Standard Industrial Classification 2621 (except buildings) of the U. S.

Department of Commerce. The principal areas of discussion are: the fundamental manufacturing processes and significant water and gaseous waste generated by each operation, process water use and reuse, waste quantities and characteristics, waste reduction practices (including both waste treatment and in-plant processing) and their effectiveness, and waste treatment costs. Projections of estimates have been made for the changes, developments, and operating practices that will be prevalent in 1977 for each area of discussion.

GUIDE TO RESEARCH IN AIR POLLUTION: PROJECTS ACTIVE IN CALENDAR YEAR 1966.
6th ed.

1966, 85P PHS-Pub-981-1966
See also Edition no. 7 dated Apr 70, PB-192 220.

Descriptors: (*Air pollution, Research).

The Guide is divided into four sections, the first summarizing the status of air pollution research as a whole, the second listing individual projects under investigation during 1966, and the third and fourth sections providing indexes to these projects by subject and by investigator. The introductory information of each section explains the arrangement of information presented therein.

MANUAL OF SEPTIC-TANK PRACTICE. DEVELOPED IN COOPERATION WITH THE JOINT COMMITTEE ON RURAL SANITATION.
1 Aug 59, 96p PHS-Pub-526
Addendum to part I inserted.

Descriptors: (*Septic tanks, *Manuals).

The Manual on septic tank practices has been prepared for use as a guide by health agencies, building officials, installers, and others, to meet the need for an authoritative treatise on the subject.

REPORT OF THE COMMITTEE ON ENVIRONMENTAL HEALTH PROBLEMS TO THE SURGEON GENERAL.
1962, 286p PHS-Pub-908

Descriptors: (*Public health, *Environments), Biomathematics, Statistical analysis, Manpower, Air pollution, Water pollution, Health physics, Food, Industrial hygiene, Environmental engineering, Pharmacology, Toxicology, Physiology, Biochemistry.

Contents:
- General background: The effort needed in environmental health;
- Resources required for the needed effort in environmental health;
- Problems in environmental health;
- Manpower resources and training;
- Applied mathematics and statistics;
- Pharmacology, toxicology, physiology, and biochemistry;
- Analytical methods and instrumentation;
- Air pollution;
- Environmental engineering;
- Milk and food;
- Occupational health;
- Radiological health;
- Water supply and pollution control.

SELECTED BIBLIOGRAPHY OF PUBLICATIONS ON INDUSTRIAL WASTES RELATING TO FISH AND OYSTERS.
Public Health bibliography series,
William Marcus Ingram, and Peter Doudoroff. Jun 53, 31p PHS-Pub-270, PHS-BS-10

Descriptors: (*Water pollution, *Bibliographies), (*Fishes, Water pollution), (*Oysters, Water pollution).
Identifiers: *Water pollution effects (Animals).

Primarily, this bibliography presents selected references that report the effects of industrial wastes on fish and oysters in their natural habitats. Some references pertaining to bioassay experiments showing the effects of industrial effluents on fish and oysters also are included.

STATISTICAL SUMMARY OF 1962 INVENTORY - MUNICIPAL WASTE FACILITIES IN THE UNITED STATES.
Andrew C. Glass, and Kenneth H. Jenkins. 1964, 45p PHS-Pub-1165

Descriptors: (*Sewage treatment, *United States), Inventories, Tables (Data).

The report presents a summary and analysis of data on sewage disposal facilities in the United States, which are published in detail in the 1962 Inventory of Municipal Waste Facilities. The data are produced in 10 tables. National summaries are given for sewer systems, sewage treatment, and disposal. Details by States, population size groups, and major drainage basins are given in separate tables. The data in the given tables are brought together for a quick summary of nationwide conditions.

PROCEEDINGS: THE SURGEON GENERAL'S CONFERENCE ON SOLID WASTE MANAGEMENT FOR METROPOLITAN WASHINGTON, 19-20 JULY 1967,
Leo Weaver. Nov 67, 191p PHS-Pub-1729-2
Library of Congress Catalog Card no. 67-62888.

Descriptors: (*Waste disposal, *District of Columbia), Air pollution, Materials handling, Automobiles, Hauling, Earth fills, Refuse, Combustion, Composts, Utilization, Regional planning, Management planning.
Identifiers: *Solid waste disposal, Sanitary landfills, Pyrolysis incineration, Waste recycling, *Kenilworth sanitary landfill.

Contents:
- Solid waste disposal study for the Washington Metropolitan area;
- Air pollution and solid waste disposal practices;
- Solid waste handling by federal installations;
- Abandoned and scrap automobiles;
- Legislative needs for a metropolitan solid waste disposal program;
- Transportation systems;
- Land reclamation;
- Refuse reduction processes;
- Recycling and utilization;
- The need for long-range planning for a solid waste disposal plan;
- Administrative problems in the regional approach to solid waste management;
- Public administration aspects of area-wide planning;
- Assistance available under the solid waste disposal act.

ENVIRONMENTAL HEALTH PRACTICE IN RECREATIONAL AREAS. A GUIDE TO THE PLANNING, DESIGN, OPERATION, AND MAINTENANCE OF RECREATIONAL AREAS.

1968, 143p PHS-Pub-1195

Descriptors: (*Recreational facilities, *Sanitary engineering), Planning, Design, Maintenance.

Environmental Health Practice in Recreational Areas is designed to provide guidance to persons responsible for planning, designing, operating, and maintaining recreational areas. The standards presented and the practices recommended have proven successful for many years in Federal, State, and local parks and other recreational places in minimizing or eliminating health and safety hazards.
